

# Grass Lake Interceptor Rehabilitation Project

## Project Update #1: October 6, 2021

On Monday, October 11, American Engineering Testing (AET) and Northern Dewatering will begin performing hydrologic testing on behalf of Metropolitan Council Environmental Services (MCES) in a few areas near Grass Lake in the Snail Lake Regional Park. These tests are being performed to develop a better understanding of the area's hydrology and will not negatively impact the park's environment.

The trail will remain open, but we ask you to exercise caution when traveling through the work areas and keep your distance from any trucks or equipment. The testing is anticipated to last through early November, but may take longer in the case of inclement weather. Check the project website for up to date information: [GrassLakeImprovements.com](http://GrassLakeImprovements.com).
