The Council’s mission is to foster efficient and economic growth for a prosperous metropolitan region.

The Metropolitan Council is the regional planning organization for the seven-county Twin Cities area. The Council operates the regional bus and rail system, collects and treats wastewater, coordinates regional water resources, plans and helps fund regional parks, and administers federal funds that provide housing opportunities for low- and moderate-income individuals and families. The 17-member Council board is appointed by and serves at the pleasure of the governor.

On request, this publication will be made available in alternative formats to people with disabilities. Call Metropolitan Council information at 651-602-1140 or TTY 651-291-0904.
A Record of Accomplishment: Highlights from 2016

Council-wide and Regional Administration

Preserving affordable housing and water quality with SAC subsidies

Equity is one of the five outcomes of Thrive MSP 2040, the Metropolitan Council’s long-term regional plan. Equity means connecting all of the region’s residents to opportunity regardless of their race, ethnicity, income, and ability. With Thrive MSP 2040, the Council has committed to using equity as a lens to evaluate its operations, planning, and investments.

In 2016, the Council allocated $250,000 to the Manufactured Home Park Preservation Project. This multi-divisional project involves housing policy, connecting manufactured home parks to the regional wastewater treatment system, and environmental and water quality considerations. The first part of this two-part project involved the creation of a baseline report, which evaluates the current state of the region’s manufactured home parks and examines the policy levers that the Council could use to help preserve them. The second part involves a pilot grant program to defray the costs of connecting one manufactured home park to the regional wastewater treatment system by using a 50/50 match structure (up to $250,000) to cover assessed regional Sewer Availability Charges (SAC).

The report is intended to inform future Council decisions and foster a larger dialogue concerning the importance of manufactured home parks and collective means to preserve them. Manufactured homes are an important source of unsubsidized affordable housing for low-income residents and residents of color (especially Latino residents) in Suburban, Suburban Edge, and Emerging Suburban Edge communities. Surveys and research show that park closures disproportionately displace households of color. Loss of these parks would undermine equity by disconnecting low-income households and residents of color from the unique opportunities offered by suburban communities.

Council ramps up workforce development

The Council continues to support programs that prepare the future workforce and help employees obtain the skills they need to support a changing customer base.

- To attract a diverse pool of potential Mechanic-Technicians, Metro Transit and partnering organizations led a first-of-its-kind program that combines workforce readiness training, education and a paid internship. In August, 19 job seekers completed the first phase of the inaugural Metro Transit Technician program, moving on to paid internships and a two-year degree program at Hennepin Technical College. A similarly-designed program to prepare job seekers for positions in Rail Maintenance launched in December with 40 participants.

- Metro Transit actively sought operators by hosting a series of testing and application events and encouraging operators to speak about their careers in new venues such as churches and mosques and on community radio. Through late 2016, operator applications had increased 20 percent compared to the same time last year and around 300 operators were to be hired. Enhanced training and communication efforts supported
current employees, including a program that allowed employees to earn supervisory experience by temporarily taking positions they’d expressed interest in applying for.

- The Metro Transit Police Department continued its growth, reaching 113 full-time officers and a pool of 71 part-time officers. The force continues to grow more diverse; the 2016 hires included the first Tibetan and Egyptian officers to work for Metro Transit. Today the department staffs 26% officers of color, up from just 5% in 2012.

- The Council’s Environmental Services (MCES) division developed a new Associate Construction Inspector job classification with reduced minimum experience requirements and on-the-job training. The division provides six-month on-the-job training for two additional entry-level job classifications, Plant Operator and Interceptor Services Worker. In addition, MCES has greatly increased its outreach to diverse and disadvantaged persons in schools, community organizations and workforce centers in order to generate interest in careers in the water industry and at MCES.

- The Council again sponsored the 12-week Urban Scholars summer internship and leadership-building program, providing critical, real-world experience for college students from diverse backgrounds. In 2016, 17 students participated in the program, working in departments throughout the Council. The Council’s regular internship program provided paid internships throughout the Council to 90+ college and graduate students. About 46% of the 2016 interns were persons of color.

**Strengthening relationships with communities**

Council Chair Adam Duininck and Council Members all spent more time in 2016 being out in communities, with local officials, and users of the parks, transit, wastewater and housing systems and programs delivered by the Council. Throughout the region, the increase in visits has resulted in stronger relationships, a better understanding of the needs of communities, and better ways to deliver services.

**Equity Advisory Committee up and running**

In 2016, the Council recruited and selected members and co-chairs for the new Equity Advisory Committee. The committee was established in late 2015 to provide expertise and advice to the Council regarding equity-related policies. The selection committee invited more than 100 candidates to interview for the 17 committee slots identified for community members. (Four current Metropolitan Council members also serve on the committee.) The Council acted in March and April to appoint the committee members and co-chairs. It began meeting in July. The group has reviewed a number of Council-related policies and activities and established meeting protocols, and will adopt its workplan for 2017 (and beyond) in February.

The group plans to meet at least monthly in 2017.

**Planning, Communities and Housing**

**PlanIt resources assist local planners**

The Council created a series of educational opportunities, called *PlanIt*, for local planners and consultants involved with local comprehensive plan updates. PlanIt includes webinars,
workshops, seminars, and conferences. The Council also expanded the Local Planning Handbook’s online resources with a series of online tutorials and expert articles on all things related to comprehensive planning. The 2016 program focused on foundational components and the 2017 program will focus on topics that help communities get more out of their plan.

The series was well attended in 2016 with an average of 40 to 50 attendees at each event, whether in person or by webinar. Feedback regularly solicited from attendees speaks to the high quality of the materials and presentations provided in the series.

Grants support local planning activities

As part of the decennial comprehensive planning process, the Metropolitan Council provides financial support to communities to update their local comprehensive plans. As directed by the Metropolitan Land Planning Act, the Council focuses on communities that have a demonstrated need for financial assistance. In 2016, the Council adopted eligibility criteria to define that need, including a community’s net tax capacity per capita and the community’s forecasted rate of growth. These criteria identified 3 different categories of grantees for a total grant program amount of $1.9 million:

- 43 sewer communities: $32,000 maximum award each
- 3 unsewer communities: $20,000 maximum award each
- 21 small cities: $10,000 maximum award each
- 3 counties/consortiums, representing 34 townships: $84,000 maximum award each

As of the end of 2016, the Council was processing applications and will issue the first half of the planning grants in 2017.

LCA grants encourage redevelopment, affordable housing, create jobs

In the 2016 funding cycle, the Council will have awarded $20.9 million in Livable Communities Act grants. The grants support revitalization of brownfields for job creation; transit-oriented development; and affordable housing.

Since 1995, the Council has awarded nearly 1,000 grants totaling over $347 million to help build or rehabilitate more than 20,000 affordable housing units; clean nearly 2,300 acres of polluted land, creating or retaining 46,000 jobs; and support development of transit-oriented, connected land uses. The grants have helped leveraged billions of dollars in other public and private investments.

Metro HRA implements Community Choice Program

The Metro HRA implemented Community Choice, a mobility counseling program designed to assist voucher holders in moving to areas of opportunity. There are 12 low-income families living in new neighborhoods and receiving post-move counseling services through this program. Community Choice promotes equitable outcomes, ensuring rent-assisted families have access to all neighborhoods in the region, particularly those with above-average school performance and low poverty.
Metro HRA receives highest ranking from HUD

The Metro HRA earned the highest possible ranking from the U.S. Department of Housing and Urban Development for calendar year 2015. Housing agencies are ranked by HUD on 14 indicators that measure agency performance related to expenditure of funds, use of vouchers, accurate and timely rent calculation, and ensuring assisted units are safe, decent and sanitary housing.

Homeless veterans get housing, support services

The Metro HRA serves 108 homeless, disabled veterans through its Veteran’s Affairs Supportive Housing (VASH) Program. VASH combines Metro HRA rent assistance and case management services provided by the Department of Veterans Affairs. The program provides safe, stable housing to homeless individuals and families. The Metro HRA was recently awarded an additional 10 VASH vouchers to serve additional homeless veterans in the coming months.

New online system creates efficiencies

The Metro HRA implemented a new online system for use by rent assistance participants and landlords in 2016. The new system promotes a paperless environment and increases administrative efficiencies. Rent Assistance participants are able to complete all paperwork online instead of through in-person appointments or by-mail transactions. Landlords have the ability to review payment and inspection records online immediately. Both provide efficiency in service in a reduced budget environment.

Regional Parks

Regional parks continue to be a top metro attraction

Twin Cities metro area residents love their parks. The Regional Parks System includes 54 regional parks and reserves, comprising nearly 55,000 acres; about 350 miles of interconnected trails, and 8 special recreation features, such as Como Zoo and Conservatory. The number of annual visits to regional parks and trails was 47.3 million in 2015 (the latest figure available). For context, the Mall of America receives about 40 million annual visits.

Parks investments protect the environment, raise quality of life, and create jobs

The Council’s investment in our regional parks helps protect sensitive environmental areas, expands the acres of regional parkland and miles of trails, expands outdoor and environmental learning, enhances park facilities, and creates jobs.

In 2016, the Council reviewed and approved master plans for the following regional parks and trails:

- Harriet Island-South St. Paul Regional Trail (Saint Paul)
- Central Mississippi Riverfront Regional Park (Minneapolis Park & Recreation Board)
- Sugar Hills Regional Trail (Anoka County)
- Bunker Hills-Chain of Lakes Regional Trail (Anoka County)
The Council also reviewed and approved amendments to the master plans for Central Anoka County Regional Trail (Anoka County) and Southwest Regional Trail (Carver County).

In 2016, the Council approved grants to 10 regional park implementing agencies distributing nearly $18.1 in fiscal year 2017 Parks and Trails Legacy funding. By statutory formula, 90 percent of the funds are allocated for construction and improvements of trails, nature centers, parking lots, and other facilities, and to enhance programming. Ten percent of the funds are allocated for parkland acquisition. With acquisition grants, the Council matches every $3 in state funds with $2 in Council bond proceeds.

The Council approved $4.2 million in grants to the park agencies to acquire properties and trail easements within planned park and trail boundaries. Parks acquisition grants are competitive and reviewed on a first-come, first-served basis, and guided by the 2040 Regional Parks Policy Plan acquisition grant rules. The 2016 grants acquired properties within Lake Elmo Park Reserve (Washington County), Rice Creek North Regional Trail (Ramsey County) Above the Falls Regional Park (Minneapolis Park & Recreation Board), and Lake Waconia Regional Park (Carver County).

**Transportation**

*Regional Solicitation set to allocate $200 million in federal transportation funds*

In July, applicants submitted 145 local projects to the Council for consideration for $200 million in federal transportation funding during the biannual Regional Solicitation process. The 145 projects totaled $540 million and sought to leverage an additional $410 million from local sources. This past summer, the Council allocated an additional $32.7 million due to several factors including the recent passage of the FAST Act, which provided increased federal funds to Minnesota.

This summer and fall, the Transportation Advisory Board’s (TAB) Technical Advisory Committee (TAC) evaluated each of the 145 projects submitted and will make final recommendations to the full TAB in January 2017. Projects selected in January will include highway, bridge, transit, bikeway, pedestrian, and Safe Routes to School projects in the metro area, the bulk of which are submitted by local governments.

*Continuous Improvement leads to ‘System of the Year’ honors*

The American Public Transportation Association named Metro Transit its 2016 System of the Year. Metro Transit was selected from agencies across North America that provide more than 20 million annual passenger trips.

The award came after the successful opening of the METRO Green Line, a decade of ridership growth, and improvements in system safety, reliability, community relations, workforce development, sustainability and financial management, among other areas.

*Improved bus service builds urban ridership*

The first of a dozen planned rapid bus lines, the A Line, successfully opened in June. The line brings faster, more frequent service, enhanced stations and specially equipped buses to one of
the region’s most-traveled corridors (Snelling Avenue and Ford Parkway in Roseville, Falcon Heights and Saint Paul, and 46th Street in Minneapolis).

Ridership on the A Line and the local bus service it largely replaced increased by about one-third through the first four months of operation, with an average of 5,600 passenger boardings per weekday in October 2016. The A Line’s on-time performance also exceeded comparable local bus service during its initial months of service. End-to-end travel times have been reduced by about 22 percent compared to prior local bus service through the use of transit signal priority, off-board fare payments, dual-door boarding and wider spacing between stations.

Planning is well along for the next rapid bus line, the C Line from downtown Minneapolis north to Brooklyn Center. The line will run west along Highway 55 to Penn Ave. N. during construction of the METRO Blue Line Extension along Highway 55. Once LRT service begins on Highway 55, C Line service will move south to Glenwood Avenue before heading north on Penn Avenue. C Line service is expected to open in 2019.

Metro Transit also expanded its High Frequency Network, improving service on all or part of three popular urban routes. The 14 routes in the High Frequency Network operate every 10 to 15 minutes throughout the day, Monday through Saturday. Average weekday ridership on Route 11 grew 10 percent after joining the High Frequency Network in March 2016.

**Locally Preferred Alternative selected for Gold Line BRT**

In 2016, the METRO Gold Line Bus Rapid Transit Project was in the pre-project development phase. The Washington County Regional Railroad Authority, in close collaboration with Met Council and MnDOT, refined the Locally Preferred Alternative (LPA) and advanced the Environmental Assessment (EA) for the Gateway Corridor (Gold Line BRT). Transition of project sponsorship, or agency lead, from WCRRA to the Met Council is under way as the LPA recommendation process is set to conclude in late December 2016. The refined LPA primarily shifts the terminus of the line from Lake Elmo to Woodbury. The refined LPA is anticipated to be amended into the 2040 Transportation Policy Plan in the first half of 2017.

**Southwest LRT ready for construction in 2017**

The Federal Transit Administration underscored its continued confidence in the Southwest LRT Project (METRO Green Line Extension) by approving the project’s entry into engineering in December. This milestone means the federal government has authorized project staff to finalize designs in preparation for the start of construction in 2017. Other 2016 milestones include:

- In May, the Federal Transit Administration (FTA) and the Council published the Final Environmental Impact Statement (FEIS) for the project.
- In July, the FTA determined that the FEIS meets the requirements of the National Environmental Policy Act of 1969, and in August, the Council determined the FEIS is adequate under Minnesota Rules chapter 4410.
- The Council, Counties Transit Improvement Board (CTIB), and Hennepin County Regional Rail Authority each approved additional funding commitments to position the project to secure more than $900 million in federal funds for half the construction costs. The Council voted to authorize the future issuance of Certificates of Participation for $103.5 million. CTIB and Hennepin County each agreed to contribute an additional
$20.5 million. These contributions will together fill a $139 million state funding gap plus delay costs due to inaction by the 2016 Legislature.

The METRO Green Line Extension will operate from downtown Minneapolis through the communities of St. Louis Park, Hopkins, Minnetonka, and Eden Prairie, passing in close proximity to Edina. At Target Field Station in Minneapolis, Green Line Extension trains will continue through downtown Minneapolis to the University of Minnesota, Midway and State Capitol areas, and downtown Saint Paul.

**METRO Blue Line LRT Extension on track**

The METRO Blue Line Extension LRT Project met several milestones in 2016:

- Hennepin County and the five cities along the line granted municipal consent.
- The Council and the Federal Transit Administration issued a Final Environmental Impact Statement for the project.
- The FTA issued a Record of Decision stating that the FEIS satisfies the requirements of the National Environmental Policy Act of 1969.

The Blue Line Extension Project – often called Bottineau LRT – will expand the existing Blue Line from Target Field in downtown Minneapolis into the northwest suburbs through Golden Valley, Robbinsdale, Crystal and Brooklyn Park, adding 13 miles to the line.

When completed, the line will offer a one-seat ride from the Target Northern Campus in Brooklyn Park to the Mall of America in Bloomington, with stops throughout Minneapolis and at the MSP International Airport. Passengers will also be able to transfer to the existing Green Line, to access the University of Minnesota, destinations along University Avenue or Downtown Saint Paul as well as to the job-dense Southwest Corridor on the planned Green Line Extension.

**Orange Line BRT submits application for federal funding**

The METRO Orange Line Bus Rapid Transit (BRT) project cleared environmental review in 2016 and submitted a competitive application for federal funding. The 17-mile Orange Line is a planned BRT line that will connect Minneapolis, Richfield, Bloomington and Burnsville along I-35W. Opening of service is anticipated in 2019.

**Special events lead to record ridership**

Metro Transit saw its highest single-day system ridership in recent memory when fairgoers mixed with commuters and sports fans across the region on Thursday, Sept. 1, 2016. People rode nearly 370,000 times system-wide as the Twins, Vikings, Gophers and Saints each hosted home games and service was provided to the Minnesota State Fair. Just a month later, on Monday, Oct. 3, a new single-day light rail ridership record was set when there were a combined 122,529 rides on the METRO Green and Blue lines. About a quarter of Vikings fans took light rail to U.S. Bank Stadium during the team’s inaugural season at the new venue.

Metro Transit also provided a record number of express bus and regular route rides to and from the Minnesota State Fair, serving 16 percent of the fair’s record 1.9 million visitors. Metro
Transit provided just over 632,500 rides to and from the fairgrounds, surpassing the 2015 record ridership by nearly 10 percent.

**Metro Transit co-creates better bus stops**

Efforts to improve the waiting experience for bus customers continued in 2016 with the installation of 33 new shelters, including several with heat and light. With these latest installations, Metro Transit is halfway to its goal of installing 150 new shelters since initiating the Better Bus Stops program in late 2014. The improvements are largely being made in areas of Brooklyn Center, Brooklyn Park, Richfield, Minneapolis and Saint Paul where there is a high concentration of poverty and the majority of residents are people of color.

In addition, Metro Transit partnered with several community-based organizations to gather customer and community input on how to improve the bus stop experience. Information gathered through surveys, at bus stops and other outreach efforts will be used in part to influence the criteria used for prioritizing shelter locations. The partnerships with local organizations may also serve as a model for future project-based community outreach and engagement activities.

Around 7,400 new bus stop signs with route numbers and additional information were also installed by the end of 2016, marking the halfway point of a system-wide replacement effort. Each sign includes a stop number and instructions for accessing real-time departure information by phone; signs at the busier stops also include route maps and information about how frequently buses arrive at that destination. The number of requests for real-time information has risen as more new signs have been installed.

**Fare payment options expand**

To make it easier and more convenient to pay fares, Metro Transit introduced a new app that includes a mobile ticketing option. With the app, customers can purchase tickets in advance online and activate them when they’re ready to ride, providing operators or police an active screen as proof of payment. The app also includes Metro Transit’s most popular trip planning tools. The app had been downloaded more than 5,600 times in just its first month. The use of Go-To Cards and unlimited ride passes also increased slightly, to around 55 percent of all fare payments. Metro Transit also introduced a new All-Day Pass that allows customers unlimited rides for a 24-hour period and continued exploring the possibility of an income-qualified discounted fare program.

**System becomes safer, more secure**

Continued efforts to improve safety and security showed results, with fewer light-rail collisions, a slight decline in bus customer accidents and slight decline in serious reported crimes. The trends in system safety were driven by extensive training, including additional instruction at the beginning of an operator’s career and in the transition from part- to full-time. Police worked proactively to make the system more secure by focusing on community-oriented and data-driven policing. Transit Police also launched a new Youth Diversion Program and welcomed 13 new full-time officers, many of whom speak a second language. In early 2016, Metro Transit was recognized with a “Gold Standard” rating for its transit security program by the Transportation Security Administration. The TSA rating is based on a voluntary, comprehensive review focused on security planning, training and outreach.
Preventative maintenance boost fleet performance

A continued focus on preventative maintenance continued to improve fleet performance in 2016. Through October, buses had traveled an average of around 8,000 miles between maintenance road calls, a key measure of reliability that is at a historically high level. Light rail mechanics completed an exterior overhaul of the 27 Bombardier vehicles that have been in service since the Blue Line opened in 2004 and continued to rebuild the vehicle’s trucks, which contain the electric motors and gearboxes that move trains down the tracks. In addition, mechanics installed new alternating flashing headlights designed to improve safety by increasing train visibility.

Wastewater Treatment, Water Quality and Water Supply

Sustainability efforts include energy conservation, solar development

- The Council’s Environmental Services division (MCES) and Xcel Energy have a five-year memorandum of understanding that establishes goals for MCES energy reduction. If MCES achieves greater reductions than outlined in the goal, it receives a bonus payment from Xcel Energy. In 2016, MCES successfully completed energy conservation projects that resulted in a savings greater than the goal.

- At the Blue Lake Wastewater Treatment Plant and NEFCO facilities, a combined total of 1.25 megawatts (MW) of solar went operational in 2016. The solar installation is producing an amount equivalent to about 10% of Blue Lake Wastewater Treatment Plant’s total load.

- MCES further advanced solar through subscriptions to Community Solar Gardens on and off Council land. These subscriptions bring many environmental sustainability benefits (air quality, climate change mitigation, no fossil fuel or water use for operations) as well as regional benefits such as jobs and less spending for fossil fuel purchases. MCES signed over 40 subscription agreements to Community Solar Gardens located on and off Council property, representing about 10 MWs in 2016. On Council property, a total of 8 MW of Community Solar Gardens (3 MW at Blue Lake and 5MW at Empire Wastewater Treatment Plant) were under construction in 2016. Both CSGs became operational in December 2016. MCES will subscribe to 40% of each garden as will Metro Transit. The remaining 20% of each garden will be subscribed to by other local governments served by the Council.

- MCES expects to save over $4 million in 2016 on avoided fossil-fuel energy purchases for wastewater treatment. (These energy savings are measured relative to 2006 energy costs as a baseline.) Moreover, cumulative (one-time) savings from rebates, grants, tariff optimization, and study dollars secured by the MCES energy program since 2007 equal about $7 million. The savings result in lower wastewater rates for city and industrial customers, as well as significant environmental benefits.

Council protects public health and environment

MCES treats approximately 250 million gallons of wastewater from more than two million residents daily. This cleaned water is discharged to our rivers. Six wastewater treatment plants received national awards in 2016 for five years or more of perfect discharge permit compliance through 2015: Hastings (25 years); St. Croix Valley (24 years); Seneca (15 years); Blue Lake (10 years); Eagles Point (10 years); and Empire (8 years). These compliance records are among the highest in the nation.
Systematic rehabilitation program protects wastewater assets

MCES is investing $130 million annually to preserve wastewater infrastructure, which has an estimated replacement value of nearly $7 billion, including $100 million annually for interceptor pipe rehabilitation and pump station renovation.

MCES receives national recognition for vision and operations

MCES was designated a 2016 Utility of the Future Today under a new national recognition program developed jointly by the U. S. Environmental Protection Agency, Water Environmental Federation, the National Association of Clean Water Agencies and other leading water organizations. Utilities are selected based on their level of engagement in advancing resource efficiency and recovery, developing proactive relationships with stakeholders, and establishing resilient, sustainable, and livable communities. Organizational culture is also evaluated for its effectiveness in inspiring and embracing positive change and innovation.

SAC Task Force looks at outdoor seating, other issues

The Council appointed a 17-member task force to discuss and make recommendations on issues related the sewer availability charge (SAC). The group includes 13 city representatives and 2 business representatives. The new task force is looking at:

- SAC charges for outdoor seating at restaurants.
- Options for manufactured home SAC affordability issues.
- Options to simplify the SAC application process for business owners.
- Options to simplify SAC credit issues for communities.

The task force will report on outdoor seating by Jan. 31, 2017 and other recommendations in February.

Grants support stormwater management innovation

The Council awarded $1,000,000 in grants for multi-benefit projects that address stormwater management and reuse. Several cooperating watershed organizations and communities received funding for using stormwater as a resource to clean fire trucks, water grass at parks and recreational areas, and other innovative investments. These efforts reduce the amount of pollution in our rivers, lakes and streams and reduce pressure on drinking water systems.

Revamped website makes searching for, sharing water data easier, quicker

The Council launched an updated Environmental Information Management System, or EIMS, to provide easy access to our high-quality lake, river and stream data for the region. This update was 10 years in the making, and makes it much easier for water quality professionals and interested citizens to find and use information to improve our rivers, lakes and streams.

A separate but similar program has been implemented to make near-real-time information available to watershed districts who utilize MCES Laboratory Services. This service provides our partners with information that they can use to tailor water quality improvement goals.
Enhancing efficiency in water quality monitoring

The Council is refining its river, lake and stream monitoring programs by applying Lean principles (through Kaizen and other advanced continuous improvement methodologies) to increase data accuracy and productivity. Enhancements to date include sustained success meeting 99%+ data accuracy goals and saving over 1,000 hours of effort per year to better meet the future needs of the communities we serve.

Council introduces electronic reporting for industrial customers

The Industrial Waste Pollution Prevention department of MCES has implemented a first-in-the-nation EPA-approved electronic reporting system for industrial customers. Industries can now submit required performance reports electronically saving both labor costs and reducing transcription errors. The program was introduced to a group of voluntary “early adopters” to great reviews and is being expanded to include all interested industries.

Industries on track to add pretreatment facilities with Council support

The Council made solid progress in 2016 to establish several industrial pretreatment programs. Four of the five applicants are moving forward in the process and are targeting 2017 for system implementation. In the industrial pretreatment incentive program (IPIP), top industrial dischargers build onsite pretreatment facilities with Met Council financing and receive up to a 30% discount on payments. The industrial customer benefits though lower strength charges and lower capital costs; the Council benefits through deferred plant expansion and lower strength processing.

Council assists communities, industries to conserve water

The Council assisted communities to reduce water use in the region by 140 million gallons a year through implementation of two water efficiency programs. The first is a water efficiency grant program that provides funding to 19 communities to implement water reduction measures (cost of the program $250,000 annually). The second is an industrial water conservation program—in collaboration with the University of Minnesota—to help eight industries use water efficiently (cost of the program $50,000 annually). The source of funding for both programs is the Clean Water Legacy Fund.

Council collaborates with local governments to address water issues

The Council in 2016 improved collaborative opportunities among cities to ensure successful planning and implementation of projects. The Council created a process to assist the Metro Area Water Supply Advisory Committee (MAWSAC) to fulfill its legislative mandate of selecting a Technical Advisory Committee (TAC) representing water suppliers and other stakeholders. The process engaged MAWSAC members and ensured consideration of diversity in selecting new TAC members. The Council also coordinated the establishment of a new water supply work group in the west metro. This increased the number of communities supported by MCES from 20 in 2005 to 65 in 2016 through funding projects and grants totaling $1.5 million.
Major Study/Report Summaries and Recommendations

2016 Inflow & Infiltration Task Force Report

In early 2016, the Metropolitan Council appointed a Task Force of local community representatives to discuss and identify areas of improvement for the existing Metropolitan Council Environmental Services (MCES) Ongoing Inflow and Infiltration Program and the potential for future inflow and infiltration mitigation strategies for both public and private infrastructure. This task force, representing public works directors, city engineers, utility managers, finance directors, and city managers, met during the 2016 calendar year.

The task force recommendations are summarized as follows:

- Continue the regional planning policy of balancing regional standards with the needs of local communities to tailor programs to their individual circumstances.
- Develop a robust public outreach program that would include proper maintenance of wastewater collection systems, ownership of sanitary sewer service laterals, and impacts of excessive I/I during wet weather events.
- Support efforts to secure funding for public and private I/I mitigation projects including State Bond and Clean Water Legacy Funds. Consider providing financial assistance through regional sources, such as a portion of the wastewater fee, to provide assistance to communities for private property I/I mitigation.
- Develop a model ordinance for a private property service lateral inspection program in conjunction with the League of Minnesota Cities, Metro Cities, and local communities.
- Develop best practices for a private property service lateral inspection program in conjunction with the League of Minnesota Cities, Metro Cities, and local communities.
- Investigate the ability to develop master contracts held by MCES that could be used by communities for private property I/I inspections and service lateral repairs.
- Design and implement a private property I/I mitigation demonstration project that would provide additional opportunity for measurement of impact on wastewater base and peak flows.
- Review the peak-hour factors used to develop I/I Goals at the time that the 2050 Water Resources Policy Plan is prepared.

2016 Regional Parks and Trails Visitor Study

The Council conducted a Regional Parks System Visitor Study in 2016. We collected data in 65 parks, park reserves, special recreation features, and 52 trails throughout the seven-county region. Study highlights:

- 5,459 regional park and trail visitors completed the questionnaire.
- Hiking, walking and biking are the most popular activities.
- Visitors to regional parks and trails visit often (mean = 56 times a year).
- Nearly all (95%) of regional park and trail visitors rated the quality, services, and recreation opportunities as either good or very good.
• Significant differences emerged based on park or trail use, visitor demographics, and among the various regional park implementing agencies.

Information gleaned from the study will be used to help inform regional park and trail planning and management. Data gathered will also be used to update inputs used in funding formulas specified in state statute.

Regional Park System Equity Toolkit

In an effort to strengthen equitable use of the Regional Parks System, the 2040 Regional Parks Policy Plan (adopted in 2015) put forward a commitment to develop a Regional Parks System Equity Toolkit to be used in funding and investment decision-making. A toolkit is typically a series of open-ended questions that seek to evaluate projects or programs and clarify both the positive and adverse impacts of the given activity. The Council invited a broad array of stakeholders—including members from regional park implementing agencies, regional park partners, community-based organizations, advocacy groups, and park users to help develop the toolkit.

The Council adopted the resulting toolkit. It consists of five “equity lens” questions to be answered by park agencies as they apply for regional parks grant funding. In addition, the toolkit has a set of “equity analysis” questions to guide the Metropolitan Parks and Open Space Commission and the Council’s conversation about the responses to the equity lens questions.

The toolkit also includes recommendations for continuous improvement of the toolkit and other ways to strengthen equity in the Regional Parks System.

Regional Drinking Water Supply, Groundwater Recharge and Stormwater Capture and Reuse Study: Southeast Metro Study Area

The Metropolitan Council retained HDR, Inc., to complete a technical assessment of the capital and operational costs, as well as the potential benefits, of three broad approaches to the regional sustainability of water resources in the northern portion of Dakota County. The study was carried out with input from and engagement with local municipalities, public water utilities, Empire Township and Dakota County through a water supply work group.

The study included:

• An analysis of nine drinking water supply scenarios for the study area.
• An assessment of opportunities for enhanced groundwater recharge in the Dakota County.
• Identifying significant opportunities for further study to implement stormwater capture and reuse as an alternative supply to offset groundwater demands.

Study results will be used by participating communities and the Council as a basis for further investigation and implementation of projects to support a sustainable and long-term water supply for the Southeast Metro.
Regional Groundwater Recharge and Stormwater Capture and Reuse Study: North and East Metro Study Area

The Metropolitan Council retained HDR, Inc., to complete a technical study of two broad approaches to the regional sustainability of water resources in the north and east part of the seven-county metro area. The study was carried out with input from and engagement with local stakeholders, including other agencies, municipalities and watershed districts/water management organizations.

The study evaluates the potential to enhance groundwater recharge and the potential for stormwater to serve as either a source for enhanced recharge or a non-potable water supply in the North and East metro area. The study is a first look at supplementing water sources and enhancing bedrock aquifer recharge on a regional scale. While not prescribing specific solutions, the study provides valuable technical information to be used in future planning and implementation efforts.

Final Environmental Impact Statement for Southwest LRT Project

The Federal Transit Administration (FTA) and the Metropolitan Council published the Southwest LRT Final Environmental Impact Statement (Final EIS) on May 13, 2016. The Final EIS identifies impacts from the Southwest LRT Project, including measures to avoid, minimize and mitigate these impacts. The Final EIS also includes the Project’s Final Section 4(f) Evaluation and Section 106 Memorandum of Agreement, and responds to comments received on the Draft EIS and Supplemental Draft EIS.

The Federal Transit Administration issued a Record of Decision in July 2016 which stated that the FEIS satisfies the requirements of the National Environmental Policy Act of 1969. In August, the Council determined that the FEIS was adequate under Minnesota Rules Chapter 4410.

In December, the FTA underscored its continued confidence in the project by approving the project’s entry into engineering. Construction is expected to start in 2017.

Final Environmental Impact Statement for Blue Line Extension LRT Project

The Federal Transit Administration (FTA) and the Metropolitan Council published the METRO Blue Line Extension Final Environmental Impact Statement (Final EIS) in July 2016. The Final EIS identifies impacts from the Blue Line Extension Project, including measures to avoid, minimize and mitigate these impacts. The Final EIS also includes the Project’s Section 404 permit application, Amended Draft Section 4(f) and 6(f) Evaluation, Section 106 Memorandum of Agreement, and responses to comments received on the Draft EIS.

In August, the Council determined that the FEIS was adequate under Minnesota Rules Chapter 4410. The Federal Transit Administration issued a Record of Decision in September 2016 which stated that the FEIS satisfies the requirements of the National Environmental Policy Act of 1969.

Readers may visit www.metrocouncil.org to find studies summarized in this section of the 2016 Annual Report.
Policy Plans and Amendments Adopted in 2016 and Related Review Comments of Metropolitan Agencies

No policy plan or policy plan amendments came before the Council in 2016.

2016 Amended Budget

Note: Revenues and expenditures for pass-through and debt-service funds rarely match on an annual basis. In 2016, the Council used reserves to account for the different in revenues and expenditures.
2017 Adopted Budget

The Metropolitan Council’s 2017 Unified Budget was submitted to the Minnesota Legislature in January 2017. It contains detailed budget information and a general description of the Council’s work program in 2017, and satisfies state budget reporting requirements. Here is a summary of the 2017 adopted budget:

2017 Legislative Program

The Council’s legislative proposals for the 2017 session are still under development as of January 15, 2017. The Council is working with the governor’s office and the state departments on proposals regarding appropriations, bonding, policy issues, and statutory housekeeping matters.
