# Regional wastewater system

moves and treats

250 million gallons

of wastewater each day

serving 2.8 million

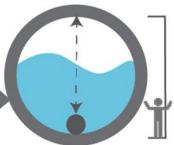

people in 111 communities in the 7-county Twin Cities metro region

That wastewater moves through privately owned and city sewer pipes into

#### 634 miles

of regional interceptor sewer mains

ranging in size from 9 inches to 14 feet in diameter and in age from 140 years old to brand new!

The wastewater also passes

#### 231 meters

measuring how much water is flowing through the pipes.

#### **60** lift stations

pumping water from lower elevation to higher elevation so gravity can help us move it.

#### on its way to

#### 9 treatment plants

cleaning the water before it is returned to the environment.

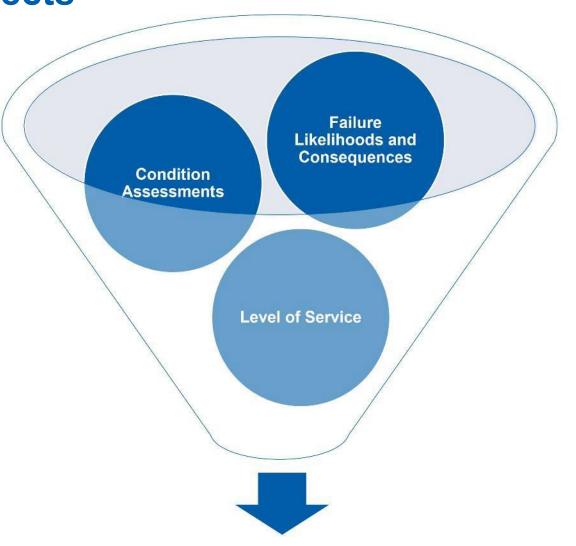

### New Project Identification

Primary Factors used in identifying new projects

Facilities are evaluated based on asset condition, capacity, or quality issues using a risk approach.

Risk: Product of Consequence of Failure (following Level of Service) and Likelihood of Failure (identified through assessment)

> Consequence	Likelihood
1. Negligible	1. Rare
2. Minor	2. Unlikely
3. Moderate	3. Moderate
4. Major	4. Likely
5. Severe	5. Certain

# **Asset Management – Condition Assessment Planning**

#### Condition assessments drive over \(^2\)3 of the Interceptor Capital Program

#### Resources:

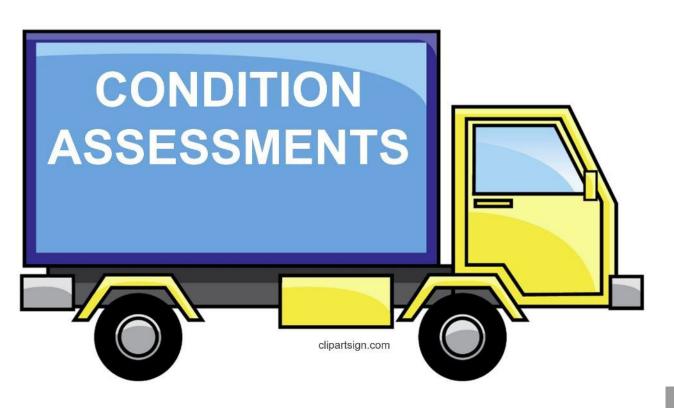

- > How much is performed internally?
- > How much is contracted?
- ➤ Who is responsible?

#### Schedule:

- > When is the assessment work completed?
- > When is the date shared?

#### Data:

- ➤ Where is the information kept?
- ➤ What is reported out?
- ➤ How is the data updated?

### Why Condition Assessments Matter?

### Best Practices for Inspection Interval

#### **Inspection Interval (Years)**

Condition Rating	Concrete, DIP Pipe	Corrosion Resistant Pipe (RPMP/HDPE/CIPP/PVC)
1	10	15
2	10	15
3	10	15
4	5	5
5	Rehabilitate/Replace	Rehabilitate/Replace
