Business Item 2015-138

Community Development Committee

For the Metropolitan Council meeting of July 8, 2015

Subject: Adopt amendment to the 2040 Housing Policy Plan and accept public comment report

Proposed Action

That the Metropolitan Council:

- Amend the 2040 Housing Policy Plan;
- Accept the public comment report.

Summary of Committee Discussion/Questions

Libby Starling and Tara Beard presented the draft amendment.

Councilmember Letofsky moved and Councilmember Elkins seconded a motion to amend the amendment by adding a sentence—"The housing element should further state when these tools will be made available." —to the end of the first paragraph under "Implementation program" (page 23 of the following amendment as paginated). The intent was that the statutory language of "in stated sequence" resonate in the housing implementation program chronologically in addition to the existing amendment language of "in what circumstances". Staff responded to a question from Councilmember Chávez that they did not anticipate that this amendment would affect the Council's review process. The amendment to the amendment passed on a unanimous voice vote.

Councilmember Letofsky noted that she saw the amendment and the Housing Policy Plan as important step toward the Council's goals of more housing for the lowest income residents and that she hoped to see stronger partnerships between developers and more local governments to address the region's great housing need.

Councilmember Wulff explained that she would be voting against the amendment because of her concerns about the lack of a transit adjustment to the Allocation of Affordable Housing Need for households earning 30% of area median income.

Councilmember Letofsky moved and Councilmember Elkins seconded a motion to approve the proposed action, including the revisions to the amendment. The motion passed on a voice vote with one dissent.

Community Development Committee

Meeting date: June 15, 2015

For the Metropolitan Council meeting of July 8, 2015

Subject: Adopt amendment to the 2040 Housing Policy Plan and accept public comment report

District(s), Member(s): ALL

Policy/Legal Reference: Minn. Stat. 473.145

Staff Prepared/Presented: Libby Starling, Manager of Regional Policy and Research (651-602-1135)

and Tara Beard, Planning Analyst (651-602-1051)

Division/Department: Community Development / Regional Planning

Proposed Action

That the Metropolitan Council

- Amend the 2040 Housing Policy Plan;
- Accept the public comment report.

Background

The 2040 Housing Policy Plan adopted in December 2014 referred to three unfinished areas of work that would be the subject of an amendment this year— criteria for reviewing the housing elements and housing implementation programs of local comprehensive plans, the precise methodology of the Allocation of Affordable Housing Need used in that review, and details to the update of the Housing Performance Scores.

The Metropolitan Council formally released a draft amendment for public comment on March 15, 2015 and held a public hearing to receive comments on May 4, 2015. The public comment period and the public hearing record remained open through May 15, 2015. During the public comment period, the Council received 33 written submissions including comments from:

- 21 cities, with one comment from a local elected official supplementing a staff comment
- 5 counties and county organizations, representing four of the region's seven counties
- 5 organizations, with one letter on behalf of an additional four organizations
- 1 resident

Rationale

This amendment defines the Council's expectations for the housing element and the housing implementation program of local comprehensive plan updates and outlines the Council's strategy for reviewing this portion of local comprehensive plan updates. The Council will include this language in the Local Planning Handbook to be distributed to local governments with System Statements this fall.

Responding to negative feedback from local governments about the late timing of receiving their Allocation of Affordable Housing Need for the 2030 Comprehensive Plan Updates, the Council intends to incorporate the Allocation of Affordable Housing Need for 2021-2030 in the System Statements that will be distributed to local governments in September 2015. Without this amendment, there is no approach for the Allocation of Affordable Housing Need for the 2021-2030 decade.

Based on feedback received through the public comment period, the Housing Policy Plan will no longer include the methodology for the Housing Performance Scores; a separate Guidelines for Priority Funding for Housing Performance will be proposed in a different action item for the Council's adoption. This approach will allow the Council to be more nimble in proposing future refinements to the new methodology without amending the entire *2040 Housing Policy Plan*.

The final version of the amendment also updates data throughout the 2040 Housing Policy Plan to the most recent available, including the 2009-13 American Community Survey, the Council's building permits survey, and the 2015 update to the regional and local forecasts.

This amendment will not be going to the full Metropolitan Council until July 8 in order to capture any final changes to the forecasts of sewer-serviced households that are scheduled to go to the Environment Committee on June 23.

Funding

The development and implementation of the *2040 Housing Policy Plan* has been a part of the Metropolitan Council Community Development Committee workplan.

Known Support / Opposition

Not all commenters agree with all elements of the language in this proposed amendment, but this language reflects the prevailing sentiments.

PROPOSED AMENDMENT TO THE 2040 HOUSING POLICY PLAN

(pagination reflects the 2040 Housing Policy Plan available on the Council's website)

Executive Summary, page 1:

Like a diversified stock investment portfolio, a diversity of housing types can increase local government resiliency through changing economic climates.

Executive Summary, page 2:

- Needs are growing: Between now2010 and 2040, the region will add 391,000367,000 households; roughly 40% will earn less than 80% of area median income (\$63,900 for a family of four).
- More people will need affordable housing options: The Council forecasts that between 2020 and 2030, our region will add 49,500-37,400 low- and moderate-income households who will need new additional affordable housing. For comparison, in the first three years of this decade, the region added just under 3,000 new affordable units, far under the need.

Executive Summary, page 3:

To fully implement this plan, the Council has more work to do to finalize the changes to the Allocation of Affordable Housing Need, the Housing Performance Scores, and the Council's strategy for reviewing the housing element of local comprehensive plan updates. In 2015, the Council will formally amend this plan, including a formal public comment process, to incorporate the final updated methodologies for the Allocation of Affordable Housing Need and the Housing Performance Scores and reflect any other updates.

Introduction, page 5:

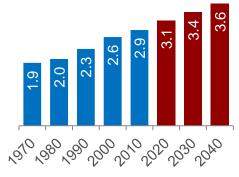

Like a diversified stock <u>investment</u> portfolio, a diversity of housing types can increase local government resiliency through changing economic climates.

Introduction, pages 6-7:

More people. Over the next 30 years, our region is projected to grow by 824,000783,000 residents, a gain of 29%27% from 2010. More births than deaths and longer life expectancies will account for ever two-thirds three-quarters of this population growth. People moving here from other parts of the nation and world—attracted by our region's economic opportunities—will account for the remaining enethird-one-quarter of this growth. (For more information, see the Metropolitan Council's MetroStats: Steady growth and big changes ahead: The Regional Forecast to 2040.)

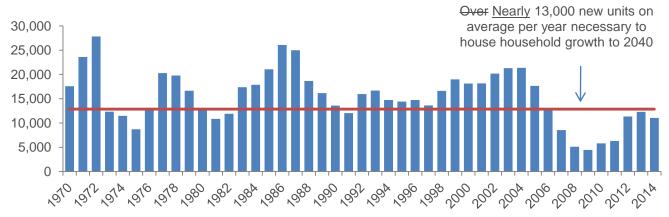

More housing needed. The region will gain 391,000 367,000 new households by 2040. Housing these new households will require over nearly 13,000 new housing

Figure 1: Twin Cities Population (in millions)

Source: U.S. Census Bureau; Metropolitan Council Regional Forecasts units a year on average between today and 2040. While this level of housing production is less than the annual average of the last 40 years, it is more than the region produced in the eight years following the housing boom years of the early 2000s.

Figure 2: New Housing Units Permitted

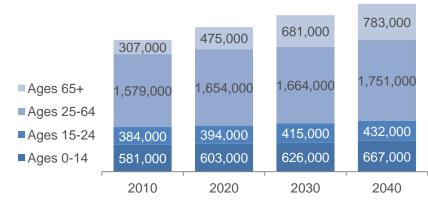

Source: Metropolitan Council Residential Construction Survey

Demographic shifts in age. Our region is aging rapidly. More than one in five residents will be age 65 and older in 2040, compared to one in nine in 2010. Furthermore, three-quarters four-fifths of household growth between 2010 and 2040 will be among older households (those headed by individuals age 65 and older). Conversely, only one in five net new households will include children, and one in three Nearly half of net new households will be individuals living alone. These demographic changes will shape the location and type of real estate needed over the next three decades.

Older households and <u>single-person</u> households without children (whether young or old) are more likely to prefer attached housing in walkable, amenity-rich neighborhoods. While many senior households

Figure 3: Forecasted Twin Cities Population by Age

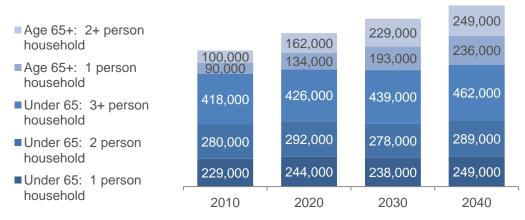

Source: U.S. Census Bureau; Metropolitan Council Regional Forecasts, 2015 update

want to age in place, the massive increase in the senior population will magnify the impact of those seniors who choose to move. Senior households are likely to want smaller, low-maintenance housing products, and easy access to services and amenities. Most senior households live on fixed incomes and have a greater interest in or need for rental housing; this preference for renting increases as seniors age.

Over the 20 years from 1990 to 2010, 91% of net household growth was among households in the peak

home-buying years of age 35 to 65. In contrast, from 2010 to 2040, 74% 80% of net household growth will be among households in the home-downsizing years of age 65 and above. Today, most baby boomers are still in the peak home-buying years. However, by the end of the next decade, the number of baby boomers likely to downsize their homes will be greater than the number of younger buyers looking to move into larger housing. Demand will likely remain high for attached and small-lot housing in walkable and amenity-rich neighborhoods.

Figure 5: Forecasted Twin Cities Households by Age and Size

Source: U.S. Census Bureau; Metropolitan Council Regional Forecasts, 2015 update

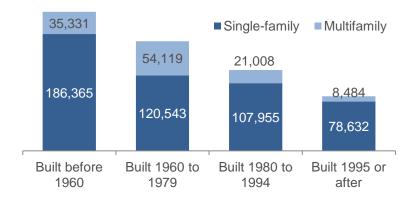

Introduction, page 8:

Demographic shifts in race and ethnicity. By 2040, 40% 41% of the Twin Cities population will be people of color, compared to 24% in 2010.

Introduction, page 9:

Many of these aging units have become more affordable but may not be viable.

Figure 4: Units with Serious Maintenance Problems

Source: U.S. Census Bureau, American Housing Survey 2007-2013 Metropolitan Public Use File⁵

Over 437,000 490,000 single-family units and over 90,000 nearly 119,000 multifamily units have a serious maintenance problem, such as water leaks or holes in the floors. Of particular concern are nearly 180,000 roughly 186,000 single-family units and nearly 30,000 roughly 35,000 multifamily units built before 1960; many of these units have aged into affordability but are at risk of functional obsolescence. While multifamily units are less likely to have a serious maintenance problem than singlefamily units, they are important to maintain given the expected preferences of future households.

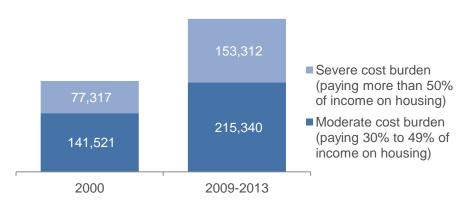

Additionally, there are nearly 53,000 over 87,000 newer units (those built in 1995 or afterward) with a serious maintenance problem. Preventing these units from further deterioration will help preserve the housing as it becomes more affordable with age.

Introduction, page 9-10:

As a result, rates of housing cost burden have increased across the region, particularly between 2000 and the 2008-2012 2009-2013 period:

- The number of households experiencing severe housing cost burden doubled between 2000 and 2008-2012 2009-2013.
- The number of households experiencing any housing cost burden grew by 75% 68% over the same time period.

Figure 5: Rising Housing Cost Burden

Source: U.S. Census Bureau, Decennial Census and American Community Survey

- By the most recent data period, more than nearly one-third of households in our region were paying at least 30% of their income for housing, and almost one in seven was paying at least 50% of their income for housing. This includes 119,000 126,000 metro households earning 50% of area median income or less who are severely cost-burdened.
- Households of color experience severe housing cost burden at nearly twice the rate, and Black households at nearly 2.5 times the rate, of white, non-Latino households.

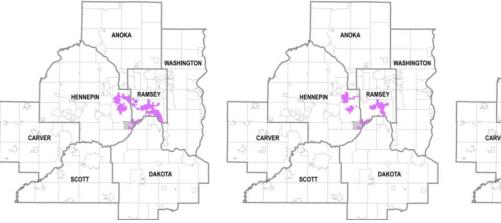

Introduction, page 11:

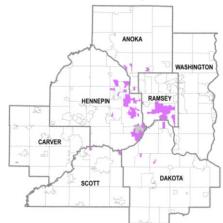

Figure 6: Areas of Concentrated Poverty in 1990, 2000, and 2007-2011 2009-2013

In **1990**, <u>81</u>86 census tracts were considered Areas of Concentrated Poverty.

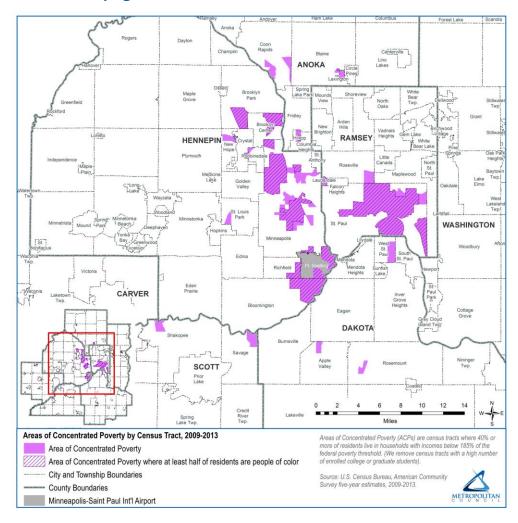

In **2000**, <u>61</u>74 census tracts were considered Areas of Concentrated Poverty.

In 2007-2011 2009-2013, 112106 census tracts were considered Areas of Concentrated Poverty.

Introduction, page 12:

Introduction, page 13-14:

In addition to the publicly subsidized affordable housing stock, there are also many units of unsubsidized affordable housing—housing whose rents or sale prices make them affordable to low-

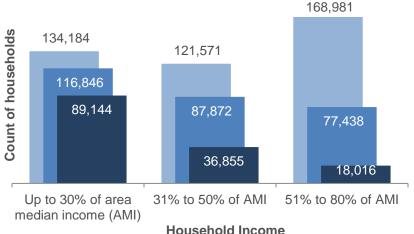

and moderate-income households. Using an affordability threshold of 80% of area median income, the region has 518,000 493,000 affordable owneroccupied units and 318,000 340,000 affordable rental units. including both subsidized and unsubsidized.vi (There are also approximately 14.000 manufactured homes that are likely to be affordable.) However, many of these housing units are occupied by households earning

more than 80% of area median income, increasing the gap in the supply of units affordable and available to lower-income households.

Even with the existing supply of affordable housing, more than 265,000 282,000 low- and moderate-income households in the region are paying more than 30% of their household income on housing costs, and nearly 140,000 144,000 of those are paying more than half their income on housing.

Furthermore, construction of new affordable housing has been dropping significantly. In 2006, the Metropolitan Council projected that the region should add 51.000 new units of affordable housing between 2011

and 2020 to accommodate the forecasted growth in low- and moderate-income households. (Note that this ignores the need for affordable housing that existed in 2010, that is, the 60,000 144,000 households paying more than half of their income on housing—much less the additional 190,000

<u>138,000</u> who are paying between 30% and 50% of their income on housing. These are the <u>low- and moderate-income</u> households that currently experience housing cost burden.) Over the first three years of the decade the region added 2,993 new affordable units, meeting just over 5% of the decade-long need. At this pace, it will take the region more than four decades to meet only one decade's need for affordable housing.

Introduction, page 14:

Looking ahead, the Council forecasts that between 2020 and 2030, our region will add 49,500 37,400 low- and moderate-income households who will need new affordable housing-options. Even if we are successful at addressing today's housing cost burden, the challenges will continue to increase with the region's ongoing population growth.

Part II: Outcomes (Prosperity), page 39:

Expand viable housing options by investing in and encouraging new additional affordable
housing in higher-income areas of the region, particularly in areas that are well connected to
jobs and opportunity.

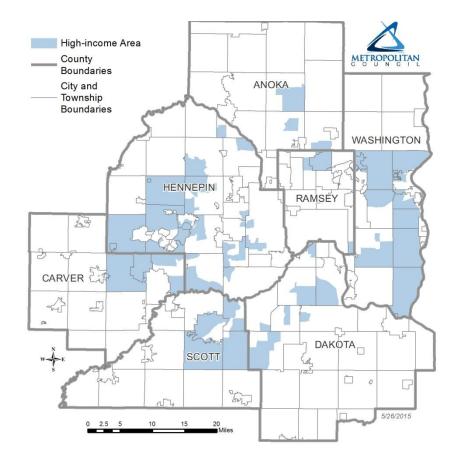

Part II: Outcomes (Equity), page 45:

Expand viable housing options by investing in and encouraging new additional affordable
housing in higher-income areas of the region, particularly in areas that are well connected to
jobs and opportunity.

Part II: Outcomes (Equity), page 47:

 Allocating each growing city its share of the region's need for new additional affordable housing.

Figure 8: High-income census tracts

Part II: Outcomes (Equity), page 48:

While access to transit can expand household transportation choices particularly for low-income households, access to transit should not constrain where new additional affordable housing is constructed. Even among the lowest income households—those earning less than \$30,000 a year—64% of all trips are by automobile.³⁰

Part II: Outcomes (Equity), pages 50-51:

In July 2013, HUD issued a proposed rule on Affirmatively Furthering Fair Housing. As of November 2014June 2015, HUD has not released a final version of the rule. Moreover, in January 2015, the Supreme Court heard oral arguments on Texas Department of Housing and Community Affairs v. The Inclusive Communities Project, Inc., has agreed to hear a case that will refine the legal extent of the Fair Housing Act. The Supreme Court is expected to issue a decision in June 2015. At this time, federal guidance is in flux.

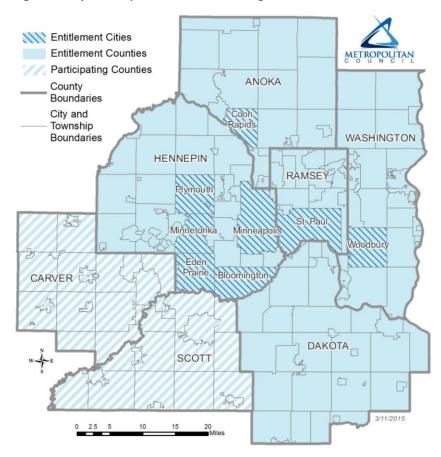

Established in 2002, the region's Fair Housing Implementation Council (FHIC) provides a venue for local entitlement communities to voluntarily cooperate to develop a regional response to the HUD-required Analysis of Impediments (AI) to fair housing choice and to leverage their use of federal CDBG and HOME funds to affirmatively further fair housing. The current signatories to the 2012-2015 FHIC Cooperative Funding Agreement are the Anoka County Housing and Redevelopment Authority, Dakota

County, Hennepin County, Ramsey County, Washington County, <u>and</u> the cities of Coon Rapids, Woodbury, Minneapolis and Saint Paul, and the <u>Metropolitan Council</u>.

In developing an AI, jurisdictions examine the impediments or barriers to fair housing, housing choices, and the availability of housing choice that affects protected classes¹ within a geographic region. The essential components of an AI include:

- Reviewing the state's or the entitlement jurisdiction's laws, regulations and administrative policies, procedures, and practices.
- Assessing of how those laws affect the location, availability, and accessibility of housing.
- Evaluating of conditions, public and private, affecting fair housing choice for all protected classes.

Figure 18: Jurisdictions participating in or considering participation in the 2014 Regional Analysis of Impediments to Fair Housing Choice

¹ As detailed above, protected classes under Minnesota law are race, color, religion, sex, disability or handicap, familial status, national origin, creed, sexual or affectional orientation, marital status, and receipt of public assistance.

Page - 10 | METROPOLITAN COUNCIL

Assessing of the availability of affordable, accessible housing in a range of unit sizes.

The FHIC has produced an Als in 2001, and 2009, and is preparing the 2014 Al2015 (for 2014). As prepared, the The 2014 Al is expected to covers the jurisdictions receiving direct funding from HUD—that is, the cities of Bloomington, Coon Rapids, Eden Prairie, Minneapolis, Minnetonka, Plymouth, Saint Paul and Woodbury, as well as Anoka, Dakota, Hennepin, Ramsey and Washington counties. In addition to the thirteen entitlement jurisdictions, the Carver County Community Development Agency, the Scott County Community Development Agency, and the Metropolitan Council participated in and helped fund the Al to ensure that the process encompassed all seven counties of the metropolitan area. (The Council itself does not receive either CDBG or HOME dollars and is therefore not required to complete an Al. However, the Council contributes funding, participation, and technical support to the work of the FHIC to identify and develop strategies that address impediments to fair housing in the region.) To date, the Carver and Scott Community Development Agencies have also expressed interest in their counties signing onto the 2014 Al to create a complete seven-county area regional perspective.

Part II: Outcomes (Livability), page 54:

Communities throughout the region recognize the significance of housing quality, choice, and affordability. The region is expecting 391,000 affordability. The region is expecting 391,000 new households by 2040.

Part II: Outcomes (Livability), page 54:

Together, Minneapolis and Saint Paul have more than nearly 4 in 10 of the region's multifamily units.

Part II: Principles (Accountability), pages 71-73:

Part III: Council Policies and Roles, page 79:

The Need attempts to provide the most objective, accurate prediction possible of the number of new low- and moderate-income households that will need affordable housing without considering the cost of, resources available, for, or barriers to building that housing. Looking ahead, the Council forecasts that between 2020 and 2030, our region will add 37,400 low- and moderate-income households that will need new affordable housing. ix (For more information on the calculations, see Appendix B.) The Need measures future affordability demand and does not incorporate existing unmet demand for affordable housing. It is determined every 10 years as a precursor to the decennial comprehensive plan updates.

Over the last three years, resources distributed through the Consolidated Request for Proposals have supported the seven-county development of:

- 2012: 763 new multifamily rental affordable housing units
- 2013: 422 new multifamily rental affordable housing units
- 2014: 1,182 new multifamily rental affordable housing units (including units funded with the Housing Infrastructure Bonds that Minnesota Housing received in 2014)

Multifamily rental units funded through the Consolidated Request for Proposals are generally affordable to households earning 50% of AMI with some units reserved for households earning 30% of AMI. While not all new affordable rental units in the region receive funding through the Consolidated Request for Proposals, these numbers provide some sense of scale—fewer than 2,500 new affordable rental units over three years.

Looking at projects selected to receive funding in 2014, overall per-unit total development costs varied from \$110,000 for single-room occupancy facilities such as the proposed Catholic Charities Higher Ground St. Paul to \$259,000 for family townhomes such as the proposed Morgan Square Townhomes in Lakeville. Excluding single-room occupancy facilities and recognizing the range of pro formas, the average subsidy—including tax credit equity and public grants—is \$185,000 per affordable unit. This suggests that meeting the 2021-2030 need for housing units affordable to households earning 50% of AMI and below would require over \$5 billion in subsidy over the decade or over \$500 million a year, far less than the available resources.

As currently deployed, existing state and federal funding sources are inadequate to subsidize the regionwide need for new housing for low- and moderate households. While local governments can and do support affordable housing development through financial contributions, fee waivers, and policies such as density bonuses, the Council does not expect local governments to underwrite the unmet need for additional affordable housing.

Local governments are responsible for guiding adequate land at minimum densities necessary to allow affordable housing development to meet their share of the region's Need. The availability of land that can support affordable housing gives developers a variety of geographic choices to consider for a affordable housing development; developers building affordable housing across the region gives loward moderate-income households viable options as to where they live.

Part III: Council Policies and Roles, page 80:

Overview of allocation methodology

Appendix B provides a detailed methodology to the Allocation of Affordable Housing Need for 2021-2030. This updated methodology has three main steps:

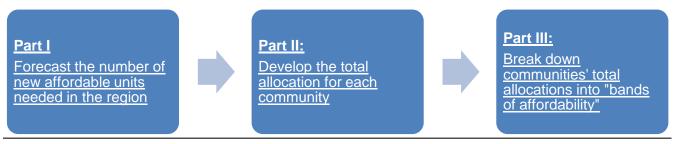

- Part I forecasts the proportion of 2021-2030 net growth in households that will need affordable housing, resulting in a regional Need of 37,900 new affordable housing units:
 - o 18,900 housing units for households earning at or below 30% of AMI
 - o 9,450 housing units for households earning from 31% to 50% of AMI

- o <u>9,550 housing units for households earning from 51% to 80% of AMI (assuming a 5% vacancy rate).</u>
- Part II allocates that regional Need to each community in the region with sewer service in alignment with the Council's policy of limiting growth in areas without sewer service. Additional adjustment factors allocate relatively more new affordable housing where the housing will help expand housing choices the most.
- Part III distributes each community's adjusted allocation into the three bands of affordability.
 Each community's share of existing affordable housing within each band of affordability affects how much of its Need is distributed into each band.

Adjustment factors

In addition to allocating a Need that is distinguished by levels of affordability, the Council will make certain adjustments that will place relatively more new affordable housing where the housing will help low-income families the most.

Figure 19: Allocation methodology overview

Rather than allocate a Need number to communities that is simply the same share of their total forecasted growth as the overall Need for the region, two specific key adjustment factors will be are used to better reflect unique characteristics of each city that impact the Need:

- Ratio of low-wage jobs to low-wage workers: The ratio of low-wage jobs in the community to
 low-wage workers who live in a community indicates whether a community imports low-wage
 workers to fill its low-wage jobs and could therefore use more new additional affordable housing
 for those workers.
- **Existing affordable housing:** Placing new additional affordable housing in communities where existing affordable housing is scarce expands choice for low-income households.

The existing affordable housing stock has twice the impact on a community's allocation as its ratio of low-wage jobs to low-wage workers because the existing housing stock is a more stable and place-based indicator; workers are more likely to move than is housing stock.

Table 6: Adjustment factors to the Allocation of Affordable Housing Need

Adjustment factors	Need is increased for communities that have:	Need is reduced for communities that have:
Ratio of low-wage jobs to low- wage workers	Relatively more low-wage jobs than low-wage workers living in the community	Relatively more low-wage workers living in the community than low-wage jobs
Existing affordable housing	Lesser share of existing affordable housing than the	Greater share of existing affordable housing than the

So that local jurisdictions can plan toward a stable number in developing their local comprehensive plan updates, the Council does not presently plan to revise the Need numbers for 2021-2030. However, the Council adjusts the Allocation of Affordable Housing Need for individual communities when the Council revises household forecasts as a result of either comprehensive plan updates or amendments. If unforeseen shifts in the landscapes of population growth and/or affordable housing need occur, the Council will consider an update to the Allocation of Need for 2021-2030.

The threshold for housing affordability and the adjustment factors for determining the Need provide a framework for determining a community's share of the Need. This framework will be the basis for a detailed methodology for determining the Need that the Council will develop in partnership with affordable housing stakeholders as a part of the implementation of this plan.

Council actions:

- Use the above-defined framework to define a detailed methodology for determining the Allocation of Affordable Housing Need for 2021-2030.
- Amend the Housing Policy Plan, including a full public comment process, to incorporate the final methodology prior to the distribution of Systems Statements to local governments in late 2015.
- <u>Distribute the local Allocation of Affordable Housing Need to each jurisdiction with System Statements in fall 2015.</u>
- Review 2040 local comprehensive plan updates and subsequent amendments to verify that
 each community is guiding an adequate supply of land to accommodate their share of the
 region's need for low- and moderate-income housing, i.e., the Allocation of Affordable Housing
 <u>Need.</u>

Part III: Council Policies and Roles, page 81:

As mentioned previously, the Need and the Goal are frequently confused. Where the Need is a proxy for demand for new additional affordable housing that should be addressed in local comprehensive plans, the Goal is a mechanism for participants of the Livable Communities Act to show their commitment and effort to produce affordable and life-cycle housing. With their Goal expressing a desire to expand housing choices, the LCA-participating communities are aided and rewarded by access to the LCA funding discussed on page 84. The two measures are products of different legislation with different purposes and requirements. One of the desired outcomes of this *Housing Policy Plan* is to improve the understanding of the roles of these measures in the regional housing conversation.

Part III: Council Policies and Roles, pages 82-83:

Emerging from this *Housing Policy Plan* will be a new set of scoring criteria the Council will <u>ereate use</u> to develop local Scores annually. <u>This methodology replaces the Guidelines for Housing Performance developed in 2002 and updated in 2012. Jurisdictions vary widely in their fiscal, technical, and human resource capacity, existing built environments, cost and availability of land, and existing level of developer interest. The Housing Performance Scores should recognize these differences. For the legitimacy of the Scores, all cities and townships should believe they have a real possibility of achieving a high Housing Performance Score. Additionally, the Housing Performance Scores can serve as a platform for the Council and cities to inventory programs and activities, and contemplate new means of addressing local housing needs given available resources. Framework for developing new Housing Performance Scores The goals of the revisions to the Housing Performance Scores are to:</u>

- Better recognize local variations in their fiscal, technical, and human resource capacity, existing built environments, cost and availability of land, and existing level of developer interest.
- Provide all cities and townships a real possibility of achieving high Housing Performance Scores if they are active in providing affordable housing or related services.
- Make the scoring process more transparent.
- <u>Minimize the administrative burden on cities by leveraging information from sources such as</u> applications to the Consolidated Request for Proposals and county housing investments.
- Use the following broad categories for the Scores:
 - Tools available at the local level
 - Tools or resources used in the last five ten years
 - Number of affordable housing units or affordable housing opportunities created in the last five ten years
 - Existing stock of affordable housing
 - Local participation in state, regional, or county housing programs, whether as an administrator, lender, funding allocator, pass-through entity, or funding applicant
 - Applications (whether funded or unfunded) submitted to the Consolidated Request for Proposals (the "Super RFP"), county-issued RFPs, or other major competitive funding processes
- Align counts of existing affordable housing (including unsubsidized affordable housing) with the 30%, 31-50% and 51-80% of area median income levels defined in the Need.
- Expand the list of scoring opportunities to reflect the full and evolving range of housing activities, programs, and tools used by local jurisdictions, including new elements such as:
 - Strategies to preserve unsubsidized affordable housing
 - Fair Housing and Equal Opportunity efforts
 - e Efforts to recruit landlords to accept Section 8 Housing Choice Vouchers
 - o Foreclosure prevention, counseling, mitigation, and remediation
 - e Energy, water, and other resource conservation
- Use the mechanisms of the Affordable Housing Production Survey and Housing Performance Score process to refer jurisdictions to best practice resources, technical toolkits, and funding opportunities.
- Evaluate the potential utility of using the housing element and implementation program components of local comprehensive plans as an assessment component under the Scores.
- Plan for the transition from the existing scoring system to the new Housing Performance Scores developed under this plan.
- Institutionalize local government review and comment on their preliminary Housing Performance Scores and create a formal structure for local governments to provide the Council additional information.

The Council expects that these refinements to the Scores will lead to both a better ability to evaluate local performance on expanding affordable housing and also a greater opportunity to help cities connect tools, ideas, and resources with development opportunities, potential partners, and a larger pool of funding and technical options.

Council actions

- Use the approach <u>defined outlined</u> above <u>and detailed in a separate policy</u> to <u>update</u> <u>calculate</u> <u>the Council's calculation of</u> Housing Performance Scores <u>annually beginning in 2015</u>.
- <u>Discontinue the calculation of county Housing Performance Scores and embed county activities</u> into city and township Housing Performance Scores.

- Review the methodology for the calculation of the Housing Performance Scores every two years, starting in 2016.
- Implement the transition from the 2002 Housing Performance Scores methodology to the 2015 Housing Performance Scores methodology with a hold harmless that no city will receive a 2015 score lower than 80% of the average of their 2010-2014 Housing Performance Scores.
- <u>Use the mechanism of collecting data for the Housing Performance Scores to refer jurisdictions to best practices, technical tools, and funding opportunities.</u>
- Institutionalize local government review and comment on their preliminary Housing Performance Scores and create a formal structure for local governments to provide the Council additional information.
- Amend the Housing Policy Plan, including a full public comment process, to incorporate the final methodology for Housing Performance Scores.

Part III: Council Policies and Roles, pages 86-87:

The SAC system is a complex structure governed by state statutes and administrative procedures. As a result, it is both politically and structurally financially challenging to leverage SAC to promote affordable housing. Through its outreach-and engagement, and policy development on the 2040 Water Resources Policy Plan, to be adopted in 2015, the Council will determine if there is a viable opportunity to promote affordable housing production through its handling of SAC. The 2040 Water Resources Policy Plan will conclude this conversation that began in the development of this Housing Policy Plan; any proposal that is subsequently adopted in the 2040 Water Resources Policy Plan will be included in a future amendment to this Housing Policy Plan.

Council actions to leverage the Sewer Availability Charge structure to expand affordable housing

 Collaboratively explore opportunities to promote affordable housing production through its handling of SAC, and, if any are identified, include those in the Sewer Availability Charge Procedure Manual. Consider including an "Affordable Housing SAC Credit" in the 2040 Water Resources Policy Plan to be adopted in 2015.

Part III: Council Policies and Roles, page 89:

Review of Housing Requirements for Local Comprehensive Plans

Cities, townships, and counties in the seven-county area prepare local comprehensive plans as required by the Metropolitan Land Planning Act. These plans must include a housing element and a housing implementation program. Local governments will begin this decade's round of local comprehensive plan updates following Council adoption of *Thrive MSP 2040* and the systems and policy plans (including this *Housing Policy Plan*) and the anticipated September 2015 distribution of Systems Statements. Comprehensive plan updates must be submitted to the Council in 2018. The Council assists local governments to create consistent, compatible, and coordinated local comprehensive plans that achieve local visions within the regional policy framework.

The Council reviews updated local comprehensive plans based on the requirements of the Metropolitan Land Planning Act and the comprehensive development guide (*Thrive MSP 2040* and the system and policy plans). The Council considers each local comprehensive plan's compatibility with the plans of other communities, consistency with adopted Council policies, and conformance with metropolitan system plans. If the Council finds that a community's local comprehensive plan is more likely than not to have a substantial impact on or contain a substantial departure from metropolitan system plans, the Council can require the community to modify its local plan to assure conformance with the metropolitan systems plans (Minn. Stat. 473.175).

Under the Metropolitan Land Planning Act, local comprehensive plans must include a housing element that:

- Contains standards, plans, and programs for providing adequate housing opportunities to meet existing local and regional housing needs;
- Contains standards, plans, and programs for providing adequate housing opportunities to meet
 <u>projected local and regional housing needs</u>; <u>Aa</u>cknowledges the community's share of the
 region's need for low- and moderate-income housing (the Need); and <u>promotes the availability</u>
 of land for the development of low- and moderate-income housing; and
- Includes an implementation section identifying the <u>public programs</u>, fiscal devices, and official controls, and specific actions the community will use to address their <u>existing and projected needs Need</u> (Minn. Stat. 473.859, subd. 2 and 4).

With the development of this *Housing Policy Plan*, the Council has identified an opportunity to improve the consistency and quality of the housing elements and implementation programs of local comprehensive plans. While communities are now guiding enough residential land at densities to support affordable housing development to address their Need, the Council had not previously provided specific guidance to local communities on other housing element requirements in the Metropolitan Land Planning Act. comprehensive plans could do more to strengthen the connection. For example, comprehensive plans could identify sites (or the characteristics of sites) that offer the best opportunities for affordable or mixed-income housing. In addition, local governments can improve the likelihood of new affordable housing by expressing what types and locations of new affordable or mixed-income housing they would support or finance.

Figure 20: Components of the housing element of local comprehensive plans

Existing housing needs

Under the Metropolitan Land Planning Act, local comprehensive plans must include a housing element that addresses existing housing needs in the community—in other words, the need for increased affordability for the people who already live (and already vote) in the community. The existing housing assessment serves as the starting point to determine a community's existing housing needs. Complete housing elements analyze the existing housing assessment through the lens of local knowledge and priorities, identifying clear, specific housing needs to be addressed in the housing implementation program. Housing elements must contain an assessment of existing housing, including at minimum:

- Number of existing housing units within the three bands of affordability:
 - 30% or less of Area Median Income (AMI)
 - Between 31% and 50% AMI
 - Between 51% and 80% AMI
- Split of rental and ownership housing
- Split of single-family and multifamily housing

- Units of publicly subsidized housing
- Number of existing households at incomes at or below 80% AMI that are experiencing housing cost burden
- A map of owner-occupied housing units identifying their assessed values, differentiating the values above and below what is affordable to a family of four at 80% AMI (see Table 8)

This minimum information is both easily available and informative about existing housing needs. While the Council will provide communities with basic data for their existing housing assessments, the Council encourages communities to include any additional reliable data that enhance their existing housing assessments.

Table 7: Home prices by household income (2013)

Household Income Threshold	Household Income for a family of four (2013)	Affordable Home Price ^x
115% of area median income	<u>\$94,650</u>	<u>\$325,000</u>
80% of area median income	<u>\$64,400</u>	<u>\$217,000</u>
50% of area median income	<u>\$41,150</u>	<u>\$133,000</u>
30% of area median income	<u>\$24,700</u>	<u>\$74,000</u>

Projected affordable housing needs

The Council provides the projected affordable housing needs for each community through the Allocation of Affordable Housing Need, described earlier in Part III. Allocating future need within the three bands of affordability allows communities to focus on the kinds of affordable housing that are most needed in their community. These future needs must be considered as communities guide future land uses in their comprehensive plan updates. The Metropolitan Land Planning Act specifically states that housing elements contain "land use planning to promote the availability of land for the development of low and moderate income housing." (Minn. Stat. 473.859, subd. 2(c))

Land availability is measured in comprehensive plans by having enough land guided at high enough densities to support the creation of affordable housing sufficient to meet a community's Need. Higher density promotes the availability of land for affordable housing in several ways:

- Increased density correlates with reduced costs of developing new housing by reducing the perunit cost of land and fixed infrastructure. With limited resources for developing affordable housing, mechanisms that reduce development costs promote new affordable housing.
- Increased density creates more housing units overall. New market-rate or luxury units can still promote the availability of affordable housing by increasing the supply of all housing units.
- Sites with higher density signal to affordable housing developers where communities are more likely to support affordable housing proposals.

For context, of the multifamily affordable units built between 2003 and 2013 in developments with at least four units affordable at 60% AMI or less, the average project density was more than 49 units per acre. The Council recognizes that flexibility is an important component of housing elements and that the minimum densities provided below are significantly lower than that average of 49 units per acre. The Council strongly encourages communities to consider densities higher than these minimums. The Council will provide technical assistance to local governments to demonstrate what different densities

can look like in different kinds of communities. With the right design, higher density development can fit well in almost any community.

Communities should guide an adequate supply of land at appropriate *minimum* densities to meet their Allocation of Affordable Housing Need. Communities have two ways to address the need for the 2021-2030 decade:

 Option 1: Guide sufficient land at a minimum density of 8 units/acre to meet the community's total Need.

OR

• Option 2: Guide sufficient land at a minimum density of 12 units/acre to meet Need at 50% or less of AMI (that is, the two lower affordability bands) and a minimum density of 6 units/acre to meet need at 51%-80% AMI.

These options allow communities flexibility in how they guide land use to meet statutory requirements within the range of community characteristics. Only enough land sufficient to address the Need must be guided—for example, a Need of 100 units could be addressed by 12.5 acres guided at 8 units/acre, or 2.5 acres guided at 40 units/acre.

Additionally, communities that choose Option 2 and have a *demonstrated* history of creating affordable units at densities lower than 6 units/acre may guide land at lower minimum densities (as low as 3-6 units/acre) when promoting land availability at the 51%-80% band of affordability.

Communities that do not guide an adequate supply of land at appropriate densities to meet their Allocation of Affordable Housing Need—that is, communities that are not fulfilling their statutory role to plan for their share of housing affordable to low and moderate income households—will be considered inconsistent with Council policy and therefore will not be eligible to participate in, and receive funding from, the Livable Communities Act programs. The Council fully acknowledges that land guided at higher densities may develop at higher price points. (Communities that are not meeting their Goal for affordable and lifecycle housing remain eligible to receive funding from the Livable Communities Act programs and will continue to receive priority in selection for funding from the Local Housing Incentives Account.).

In addition to meeting the requirements of the Metropolitan Land Planning Act, these minimum densities help create opportunities across the region for new affordable housing rather than only in the older parts of the region that have higher densities.

Figure 21: Options for guiding land to meet projected need for affordable housing

Option 1:

Guide sufficient land at a minimum density of:

•8 units/acre to meet a community's total need

Option 2:

Guide sufficient land at a minimum density of:

- 12 units/acre to meet need at 50% or less AMI (combines the two lower affordability bands)
- 6 units/acre to meet need at 51%-80% AMI

Implementation program

Communities have a variety of additional tools at their discretion to encourage, incent, and even directly create affordable housing opportunities; guiding land at higher densities alone is insufficient to meet the existing or projected needs for affordable housing. Complete housing elements must not only identify a community's "programs, fiscal devices and other specific actions" (Minn. Stat. 473.859, subd. 4) available to meet housing needs as stated in statute, but also clearly and directly link which tools will be used, and in what circumstances, to explicitly address the needs previously identified. The housing element should further state when these tools will be made available.

The Council recognizes that this is a more robust application of the statutory language than in the last round of comprehensive plan updates. The Council will ensure that technical assistance is available to help communities identify and direct their resources. Complete housing elements do not have to commit every available tool to meet housing needs, but must identify and consider all reasonable resources.

The Council will provide local planners a list of reasonable tools and resources to support affordable housing development through the Local Planning Handbook. The Council will neither recommend specific tools nor comment on a community's explanation of why they will or will not use specific tools. By providing a list of tools that many communities successfully use, the Council hopes that local comprehensive plans will be clear, transparent policy documents that provide road maps to address housing needs for planners, local leaders, developers, and citizens alike. In addition to meeting the statutory requirements of the Metropolitan Land Planning Act, these comprehensive plans will signal to developers of where communities are likely to support affordable housing and thereby make affordable housing development a less risky proposition.

Council actions to review comprehensive plan updates to expand housing choices

- Work with local governments and other appropriate stakeholders in the first quarter of 2015 to
 determine how to strengthen and more effectively review the housing element and
 implementation program in local comprehensive plans in preparation for the 2018 round of local
 comprehensive plan updates.
- Include local responsibilities connected to housing in the 2015 update of the Local Planning Handbook.
- Incorporate new Include updated housing requirements and review criteria in into the 2015 update of the Local Planning Handbook.
- Provide technical assistance to communities desiring more detailed discussion about new requirements and review criteria.
- Provide communities basic data to inform their existing housing assessments.
- Provide technical assistance to communities desiring support identifying and understanding available tools to meet <u>existing and projected affordable</u> housing needs.
- Review the housing element of 2040 Comprehensive Plan updates for completeness with new updated requirements review criteria.
- Provide technical assistance to communities desiring ways to get the most out of their housing element beyond minimum requirements, both in the Local Planning Handbook and in direct assistance if requested.

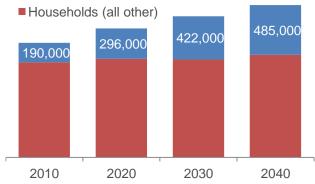

Renumbering and data updates:

Page 65: Table 7 <u>8</u> Page 91: Table 8 <u>9</u> Page 103: Figure 20 23
Page 105: Figure 21 24
Page 107: Figure 22 25

Part IV: Opportunities for Collaboration, page 101:

Over one-third of households with a householder age 65 or older—73,000 more than 74,000 households—pay more than 30% of their income on housing. Cost burden for seniors is particularly severe among those who rent; nearly two-thirds of renter households with a householder who is age 65 or older pay more than 30% of their income on housing.^{xi}

Figure 49 <u>22</u>: Forecasted growth in households headed by seniors

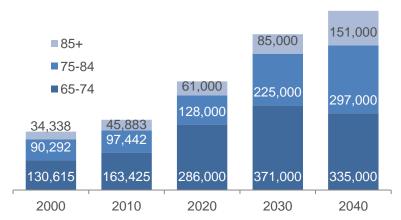

Source: U.S. Census Bureau; Metropolitan Council Regional Forecasts (2015 update)

Part IV: Opportunities for Collaboration, page 102:

Providing high-quality, accessible housing options for people with disabilities is a challenge for housing development and especially affordable housing development. As our population grows and ages, the availability of quality, accessible housing options for people with disabilities will be increasingly important. In the seven-county region there are approximately 250,000 nearly 260,000 residents with a disability, accounting for nearly 9% of the regional population. Hearly half (48%) More than fourtenths (44%) of the region's non-institutionalized residents aged 75 or older experience difficulty with vision, hearing, mobility, personal care, or independent living, and 14%11% have moderate to severe memory impairment. Given the significant recent and forecasted growth in these older age cohorts, there is likely to be additional growth in the number of people with disabilities due to aging and longer life expectancies.

Part IV: Opportunities for Collaboration, page 103:

Figure 20 23 Growth in older age cohorts

Source: U.S. Census Bureau; Metropolitan Council Regional Forecasts

Part IV: Opportunities for Collaboration, page 104:

Housing affordability is a particularly important issue for people with disabilities. More than half of households with disabilities in the region experience housing cost burden, compared to <u>less than</u> one-third of households without disabilities. For example, in the region's project-based Section 8 properties, 20% of units are occupied by households with a non-elderly person with a disability. Similarly, 20% of <u>people in the region</u>'s households with a Section 8 Housing Choice Voucher include a person with <u>have</u> a disability. In public housing, the rate is even higher—with 34% of households in <u>one-third of public housing have a person with residents having a disability.</u> The disproportionate residency of households with a person with a disability people with disabilities in publicly-subsidized housing results from several factors, including:

- The high rate of poverty for persons with a disability;
- A lack of accessible or highly affordable units provided by the private market;
- Possible discrimination faced by households in the private market; and

Part V: Next Steps, page 113:

This document has repeatedly referenced additional work needed to implement this plan and to clarify concepts that need more conversation and definition. Changes to the established Council roles in housing—including the Allocation of Affordable Housing Need, the Goals for Affordable and Life-cycle Housing, the Housing Performance Scores, and expanded roles in technical assistance—are examples of the Council's next steps to refine and implement this plan. Note that in 2015, the Council will formally amend this plan, including a formal public comment process. The amendment will incorporate the final updated methodologies for the Allocation of Affordable Housing Need and the Housing Performance Scores, and reflect any other updates.

With the amendment to this plan in 2015, the Council is now moving its focus from developing housing policy to implementing housing policy in collaboration with local units of government.

Priorities through 2015 and the issuance of Systems Statements

- Finalize the methodology for the 2021-30 Allocation of Affordable Housing Need and the Housing Performance Scores.
- Determine how to more effectively review the housing element and implementation program in preparation for the 2018 round of local comprehensive plan updates, and incorporate new comprehensive plan review criteria into the Local Planning Handbook.
- Identify indicators to measure how Council-supported projects advance equity.
- Adopt a fair housing policy.
- Analyze the impact of using the Housing Performance Scores as a prioritization factor and evaluation measure in transportation investments.
- Align, to the extent possible, the priorities for the Livable Communities Act funding with the policies in this plan.
- Refine and, if appropriate, implement the proposal to create a Sewer Availability Charge
 Affordable Housing Credit. Collaboratively explore opportunities to promote affordable housing
 production through its handling of Sewer Availability Charge, and, if any are identified, include
 those in the Sewer Availability Charge Procedure Manual.
- Plan and facilitate, in coordination with the Equity in Place coalition, a series of public engagement sessions in specific communities where more prominent disparities exist in our region.

Addition to Appendix A after p. 118:

Three working groups were convened to advise the Council on the development of the Housing Performance Score methodology, the Allocation of Affordable Housing Need methodology, and the requirements for housing elements of local comprehensive plans. The first two groups continued work begun in subgroups of the original Housing Policy Plan Work Group (HPPWG), supplemented with additional participants. The Council invited additional participants to add perspectives that were lost when some original HPPWG members did not reengage beyond their initial commitment, which ended when the original Housing Policy Plan was adopted in December 2014. The third group was new and consisted of some original HPPWG members (all members were invited to participate) and a significant addition of technical staff from our partners in the local government community, particularly those with expertise and experience in the comprehensive planning process.

Each of the three groups met a total of three times during January and February of 2015, contributing a wealth of information, questions, and perspectives to consider in the drafting of this amendment.

Participants in the three workgroups are identified below:

Appendix B: Methodology of the Allocation of Affordable Housing Need

Definitions and Concepts

The following definitions and concepts are important for understanding the methodology behind the allocation of affordable housing need in the Twin Cities region between 2021 and 2030.

- Low-Income Household: In this process, a household is considered "low income" if its annual income is at or below 80% of the Area Median Income (AMI) for the 13-county Minneapolis-Saint Paul-Bloomington metropolitan statistical area, as determined by the U.S. Department of Housing and Urban Development. Approximately 39.5% of the region's households are "low income" under this definition.¹
- Household Growth: The methodology relies on Metropolitan Council forecasts of growth in sewer-serviced households between 2020 and 2030. A given community's growth in sewerserviced households could be different from its growth in all households if some households in the community are not connected to regional or municipal sewers. Exhibit 1 provides a map of forecasted net household growth for sewered communities.
- Existing Affordable Housing Stock: The methodology increases the Need allocation for communities with a lower share of existing affordable housing than the average sewered community and decreases the Need allocation for communities with a higher share than that average. We then estimate the share of a community's housing units that are affordable to households with income at or below 30% of AMI, between 31% and 50% of AMI, and between 51% and 80% of AMI—including ownership housing,² rental housing,³ and manufactured homes.⁴ These estimates cover all housing units, whether they are publicly subsidized or unsubsidized. Exhibit 2 provides a map of existing affordable housing shares for sewered communities.
- Balance of Low-Wage Jobs and Workers: The methodology increases the Need allocation for communities that are relatively large importers of workers in low-wage jobs and decreases the Need allocation for communities that are relatively large exporters of workers in low-wage jobs.
 We estimate this for each community by examining the ratio of low-wage jobs to residents who

² Source: 2013 and 2014 MetroGIS Regional Parcel Datasets. We examined the 2013 assessed market

² Source: 2013 and 2014 MetroGIS Regional Parcel Datasets. We examined the 2013 assessed market value for homesteaded units and classified them as affordable at or below 30% of AMI if the value was \$74,000 or less; affordable between 31% and 50% of AMI if the value was between \$74,000 and \$133,000; and affordable at 51% to 80% of AMI if the value was between \$133,000 and \$217,000. These are the values at which estimated monthly mortgage payments—including principal, interest, property taxes, and insurance—are no more than 29% of the monthly income for a family of four at these income levels. We then adjusted the resulting counts to better match the Council's 2013 estimates of housing units and the tenure distribution in the 2013 American Community Survey.

Source: U.S. Census Bureau, 2007-2011 Comprehensive Housing Affordability Strategy (CHAS) data. This data provides counts of units that are affordable to households with income at or below 30% of AMI, between 31% and 50% of AMI, and between 51% and 80% of AMI. ("Affordable" in this context means that the combined cost of rent and utilities is no more than 30% of the monthly income of a household that could live in the unit without overcrowding. The specific threshold for affordability thus varies by unit size and AMI threshold.) We adjusted the resulting counts to better match the Council's 2013 estimates of housing units, the tenure distribution in the 2013 American Community Survey, and the affordability distribution of rental units in the 2013 American Community Survey Public Use Microdata Sample.

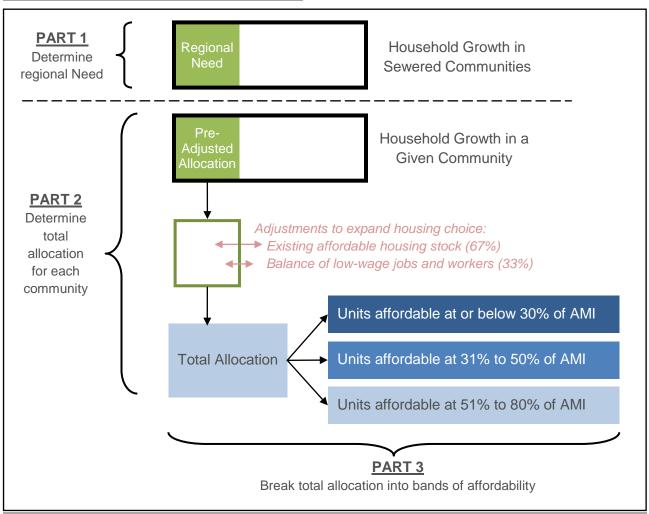

⁴ Source: Metropolitan Council, 2013 Manufactured Housing Park Survey. We assume that all manufactured homes are affordable to households with income at or below 30% of AMI.

work in low-wage jobs for all areas within five miles of the community's geographic center. Using this five-mile radius rather than jurisdictional boundaries balances the need to have a reasonably "local" measure with the fact that labor markets cross jurisdictional boundaries. Exhibit 3 provides a map of low-wage job/worker balance for sewered communities.

Specific Steps in the Methodology

The allocation process has three main steps, shown below in Figure B-1. In Part 1, we forecast the proportion of 2021-2030 net household growth that will require additional affordable housing, resulting in a regional Need of 37,900 new affordable housing units. In Part 2, we allocate that regional Need to each community in the region with sewer service, making adjustments that allocate relatively more additional affordable housing where the housing will expand housing choices the most. In Part 3, we distribute each community's adjusted allocation into three "bands of affordability."

Figure B-1. Overview of Allocation Process

⁵ Source: U.S. Census Bureau, Longitudinal Employer-Household Dynamics (LEHD) Origin-Destination Employment Statistics (LODES), 2011. "Low-wage jobs" are those paying \$3,333 or less per month (equivalent to \$40,000 or less per year). "Residents who work in low-wage jobs" are people whose primary job is a low-wage job. We also examined ratios based on areas within five miles of the community's *population* center; results were

very similar.

The following explains the detailed calculations behind the Need allocation. Exhibit 4 provides a map of the allocated Need for sewered communities; tables showing calculations are available in Exhibits 5 and 6.

Part 1: Forecast the Number of New Affordable Units Needed in the Region

Figure B-2. Overview of Regional Need Calculations

Step 1: Determine forecasted household growth	Step 2: Determine income levels	need additional afforda		useholds at each income level using units (Total = 37,400 olds)	Step 4: Ensure healthy vacancy rate (51-80% band only)	
	Income at or below 30% of AMI (20,400)		,900 hc	ouseholds	<u>18,900</u> <u>units</u>	Total All
an in 2020	Income at 31% to 50% of AMI (16,550)			9,450 households	<u>9,450</u> <u>units</u>	Total Allocation = 37,900 units
lds in 2030 th	Income at 51% to 80% of AMI (19,450)			9,050 households	<u>9,550</u> <u>units</u>	00 units
119,000 more households in 2030 than in 2020	Income <u>above</u> <u>80% of</u> <u>AMI</u> (62,600)					

<u>Step 1: Determine forecasted household growth.</u>
 The Metropolitan Council's March 2015 regional forecast shows that the region will have 1,258,000 households in 2020 and 1,377,000 households in 2030—a net growth of 119,000 households.

- Step 2: Determine the proportion of growth constituted by low-income households. Of the 119,000 additional households the region is expected to add between 2020 and 2030, 17.2% (20,400) will have incomes at or below 30% of AMI, 13.9% (16,550) will have incomes between 31% and 50% of AMI, and 16.3% (19,450) will have incomes between 51% and 80% of AMI. This is a total of 56,400 households. These projections come from historical income distribution patterns, applied to the 2020 and 2030 household forecasts.⁶
- <u>Step 3: Determine how many low-income households will need additional affordable housing units.</u>

Not all low-income households will need additional affordable housing units. Some will be low-income seniors who already own their home free and clear without experiencing housing cost burden. Filtering out those households, there will be a total of 37,400 low-income households needing additional affordable units—18,900 households with income at or below 30% of AMI, 9,450 households with income between 31% and 50% of AMI, and 9,050 households with income between 51% and 80% of AMI.

• <u>Step 4: Calculate how many housing units will be needed to accommodate these low-income households.</u>

Housing units in the 51-80% band are likely to be supplied by the private market rather than governmental subsidies. If the region added only 9,050 housing units to accommodate the net growth in new low-income households needing additional units in that band, the market for affordable housing in that band would become increasingly tight. To ensure the 5% vacancy rate that fosters a healthy housing market, the region needs 9,550 total housing units to house the net growth in low-income households with income between 51% and 80% of AMI. We do not apply this vacancy rate adjustment to the 0-30% band or the 31-50% band because those units are likely to be publicly subsidized and less subject to the upward pressure on housing prices resulting from low vacancy rates. Adding those 9,550 units in the 51-80% band to the 18,900 units in the 0-30% band and the 9,450 units in the 31-50% band yields a total regional Need of 37,900 units.

Part 2: Develop the Total Allocation for Each Community

The 37,900 total affordable units should be allocated across the region's communities in a way that places relatively more affordable housing units where they will expand housing choices the most. Recognizing that Council policies do not encourage development beyond sewer-serviced areas, we allocate Need only for the 124 communities with sewer service.

The following steps, visualized below in Figure B-3, provide more detail on the method for allocating Need across these 124 communities. Exhibits 5 and 6 following this report indicate the results of these calculations for each community's share of the regional Need.

Survey Public Use Microdata Sample.

Figure B-3. Overview of the Total Allocation

Step 1: Calculate pre-adjusted allocation proportionate to forecasted household net growth. A community's initial, "pre-adjusted" allocation is proportionate to its forecasted household growth: the more households it is expected to add, the higher its allocation will be. Specifically, the pre-adjusted allocation is 33.0% of each community's forecasted household net growth.8 This percentage comes from dividing the regional Need (37,900) by the forecasted household growth across all sewer-serviced areas (114,790).

For example, Chanhassen and Maplewood both have forecasted net growth of 1,900 households and thus a preliminary allocation of 627 housing units (33.0% of 1,900), as Table B-1 shows.

Source: Forecasts developed by Metropolitan Council Environmental Services with input from Council Research staff, and supplemented by Council Research estimates of growth in municipal-serviced areas. In some communities where the sewer network expands to cover existing households, these numbers produce higher net household growth than the total growth forecast. In these cases, we used the total growth forecast to avoid conflating changes in household growth with changes in the sewer network.

Table B-1. Calculation of Pre-Adjusted Allocation

	(A) Forecasted Sewer- Serviced Households, 2020	(B) Forecasted Sewer- Serviced Households, 2030	(C) Forecasted Net Growth in Sewer- Serviced Households (B - A)	(<u>D)</u> <u>"Equal</u> <u>Share"</u> <u>Factor</u>	(E) Pre- Adjusted Allocation (C × D)
<u>Chanhassen</u>	<u>9,170</u>	<u>11,070</u>	<u>+1,900</u>	33.0%	<u>627</u>
Maplewood	16,540	<u>18,440</u>	+1,900	33.0%	<u>627</u>

- Step 2: Adjust the pre-adjusted allocation upwards or downwards according to the balance of low-wage jobs and workers and the existing affordable housing stock.
 The pre-adjusted allocation is adjusted as follows:
 - Existing affordable housing stock: A community's allocation is increased if its existing
 affordable housing share is less than that of the average community with sewer service.
 A community's allocation is decreased if its existing affordable housing share is greater
 than that of the average community with sewer service. This is measured by the
 proportion of existing housing units that are affordable, as described above.
 - Balance of low-wage jobs and workers: A community's allocation is increased if it imports workers in low-wage jobs to a greater extent than the average community. A community's allocation is decreased if it imports workers in low-wage jobs to a lesser extent than the average community. This is measured by the ratio of low-wage jobs to residents working in low-wage jobs, as described above.

Because the jobs/workers ratios (which range from 0.21 to 2.88) and the existing affordable housing shares (which range from 3% to 100%) have such different scales, any adjustments based on the raw measures could unintentionally let one adjustment have more influence over the final allocation than the others. We address this by standardizing these raw measures, also known as converting them into Z-scores, with the formula: $= (X - \overline{X}) \div SD$.

That is, we subtract the average for all sewered communities from each community's measure and divide by the standard deviation. The specific formulas for determining the Z-scores for each community are:

- $Z_{Housing} = (Community's Affordable Housing Share 0.66) \div 0.25$
- $Z_{Iob/Worker\ Balance} = (Community's\ Job/Worker\ Balance\ Ratio 1.08) \div 0.52$

These Z-scores can be positive (if the community has a higher-than-average ratio or proportion) or negative (if the community has a lower-than-average ratio or proportion). Values of Z-scores represent how many standard deviations each community is from the average ratio or proportion, which is represented by a Z-score of 0. For example, a community with a Z-score of

Like the mean, the standard deviation is a statistic that summarizes a set ("distribution") of numbers. Where the mean represents the *average score*, the standard deviation represents the *average distance of communities from the mean*. Higher standard deviations indicate that a distribution has more "spread," rather than being tightly clustered around the average score.

+2.0 has a substantially higher ratio or proportion than average, and a community with a Z-score of -2.0 has a substantially lower ratio or proportion than average.

Next, we rescaled both sets of Z-scores to percentages so that the pre-adjusted allocation would not be increased by more than 100% or decreased by more than 100%. This simply changes the scale of the standardized scores; it does not change their distributions.

The result is a set of adjustment factors that can be weighted as desired to achieve the intent of the policy. For example, weighting each adjustment factor at 50% would allow existing affordable housing and job/worker balance to affect the adjustment step equally.

We weight the affordable housing adjustment at 67% and the job/worker balance adjustment at 33%, allowing affordable housing to have twice as much influence on the allocation as job/worker balance. We do this because the existing housing stock is a more stable and place-based indicator; workers are more likely to move than housing units are.

Table B-2 shows these calculations for Chanhassen and Maplewood. For example, 32% of Chanhassen's existing housing units are affordable to low-income households—lower than 66%, the average share for all sewered communities. This is reflected in the Z-score of +1.37 for Chanhassen's housing measure. (The actual Z-score is -1.37, but we reverse the sign because the original measure does not go in the desired direction: communities with *lower-than-average* existing affordable housing shares have their allocations adjusted *upwards*.)

Maplewood's affordable housing share of 85%, though, is higher than the average of 66%; it receives a Z-score of -0.74.

If we multiplied the pre-adjusted allocation by the standardized scores in Column C to calculate the adjustments, some communities' allocations could be negative or more than their forecasted growth. The rescaled standardized scores described above avoid this problem: Chanhassen's rescaled housing score is +0.40, while Maplewood's is -0.21.

Applying weights (Column E) to the rescaled Z-scores (Column D) yields the final adjustment factors (Column F): +27% for Chanhassen and -14% for Maplewood.

The jobs adjustment factors work identically, although the sign of the Z-score is not flipped because the original measures goes in the desired direction (communities with *higher-than-average* job/worker balance ratios have their allocations adjusted *upwards*).

Note that both communities are farther from the average community with respect to existing affordable housing than job/worker balance (the Z-scores are farther from 0), and the weighting further increases the influence that housing has on the allocation.

 $[\]frac{10}{10}$ To do this, we divide the Z-scores for affordable housing and job/worker balance by 3.44, the standardized score with the highest absolute value.

Table B-2. Calculation of Adjustment Factors

		(A) Original Measure	(<u>B)</u> Average Community	(C) Measure Converted to Z-score	(D) Z-score rescaled (C ÷ 3.44)	<u>(E)</u> Weight	(F) Adjustment Factor (D × E converted to %)
Housing	Chanhassen	<u>32%</u>	<u>66%</u>	+1.37	+0.40	<u>67%</u>	<u>+27%</u>
	Maplewood	<u>85%</u>	<u>66%</u>	<u>-0.74</u>	-0.21	67%	<u>-14%</u>
<u>Jobs</u>	Chanhassen	1.22	<u>1.08</u>	+0.27	+0.08	<u>33%</u>	<u>+3%</u>
	Maplewood	0.87	<u>1.08</u>	-0.40	-0.12	33%	<u>-4%</u>

While this method of creating adjustment factors is more complicated than simply relying on the raw measures, it produces adjustment factors that more accurately reflect the policy intent of the 2040 Housing Policy Plan.

Finally, we multiply the pre-adjusted allocation by the adjustment factors to calculate the numerical adjustments for job/worker balance and existing housing stock. Summing the pre-adjusted allocation and the numerical adjustments yields the adjusted allocation. Table B-3 carries out this math for Chanhassen and Maplewood.

Table B-3. Implementing Adjustments for Overall Allocation

	(A) Pre- Adjusted Allocation	(B) Adjustment Factor for Housing	(C) Adjustment Factor for Jobs	(D) Change in Allocation for Housing (A × B)	(E) Change in Allocation for Jobs (A × C)		(G) <u>Final</u> <u>Allocation¹¹</u> (F × 99.3%)
Chanhassen	<u>627</u>	+27%	+3%	+168	+16	<u>811</u>	<u>805</u>
Maplewood	<u>627</u>	<u>-14%</u>	<u>-4%</u>	<u>-90</u>	<u>-24</u>	<u>513</u>	<u>509</u>

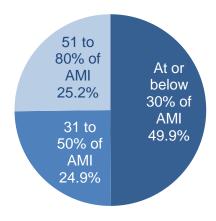

Part 3: Break Down Communities' Total Allocations into "Bands of Affordability"

Low-income households have a wide variety of needs and preferences for the types and locations of their housing. To provide nuance and flexibility for local planning for homeownership and rental housing across a range of incomes and housing types, the Council is allocating Need within three bands of affordability:

- Need for housing units affordable to households with incomes at or below 30% of AMI (49.9% of the regional Need);
- Need for housing units affordable to households with incomes between 31% and 50% of AMI (24.9% of the regional Need); and
- Need for housing units affordable to households with incomes between 51% and 80% of AMI (25.2% of the regional Need).

Figure B-4. Share of Regional Need in Each Band

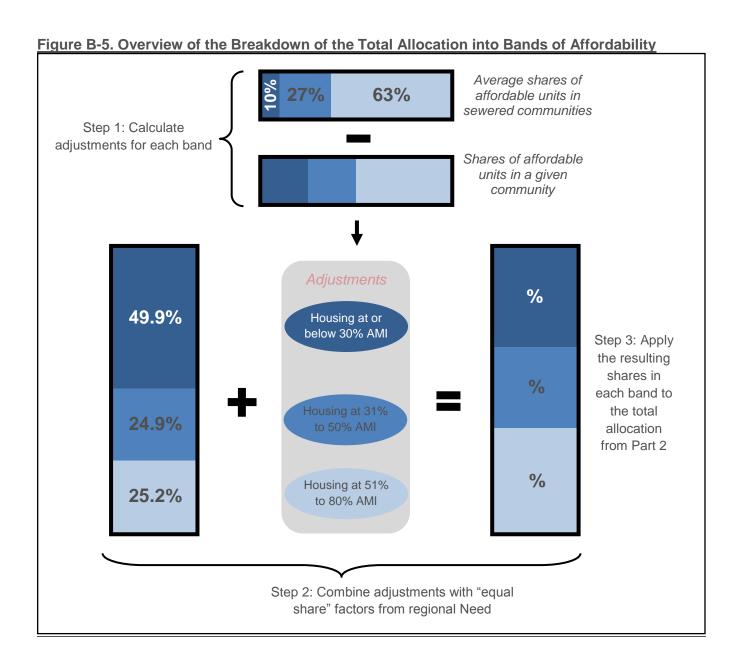

¹¹ Under our methodology, the adjusted allocations for all communities add up to 38,166. This is higher than the regional Need of 37,900, so we adjust all allocations proportionately downward to achieve the regional Need.

Applying these regional shares to each community's adjusted allocation does not reflect the diversity within communities' existing housing stock. For example, one community might have a higher-than-average share of housing in the 51-80% band and lower-than-average shares of housing in the other two bands. To expand housing options and choice, we reduce this community's allocation in the 51-80% band and increase its allocation in the other two bands.

The method for Part 3 is diagrammed below in Figure B-5. We start with the regional shares of the Need, adjusting them as outlined in the previous paragraph. Those adjustments are developed in Step 1, where we compare each community's shares of affordable units in each band to the average shares for all sewered communities. In Step 2, we combine those adjustments with the "equal share" factors, resulting in each community's share of its allocation that goes to each band. Finally, in Step 3, we apply those shares to the total allocation to calculate the number of units in each band.

Note that Part 3 does not change the overall allocation for communities developed in Part 2. Rather, we are simply assigning different shares of each community's allocation to different bands. Accordingly, we are no longer examining differences across communities in the *overall* level of affordable housing, but differences in affordability *within* each community's set of affordable units.

Step 1: Calculate differences in affordability for each band from the average for all communities. In this step, we examine the shares of each community's affordable housing in each band and compare them to the average for all sewered communities. The difference between them provides an adjustment that will help determine the share of each community's total allocation to place in each band.

Table B-4 provides examples. In Chanhassen, the share of existing affordable units in the 0-30% band is lower than average (so the corresponding adjustment factor is positive), while the shares in the 31-50% and 51-80% bands are higher than average (so those adjustment factors are negative). Maplewood displays a different dynamic: a relatively higher share in the 31-50% band, a relatively lower share in the 51-80% band, and an average share in the 0-30% band.

Note that the shares of existing affordable housing within each band sum to 100%, as do the shares for the average community (before rounding).

Table B-4. Calculation of Adjustments to Band Shares

	Band	(A) Share of existing affordable housing in band	(B) Share of existing affordable housing in band for average community	(C) <u>Difference of</u> <u>community from</u> <u>average</u> (B - A) ¹²
Chanhassen	At or below 30% AMI	<u>2.2%</u>	9.7%	<u>+7.5%</u>
	31% to 50% of AMI	<u>28.4%</u>	<u>27.5%</u>	<u>-1.0%</u>
	51% to 80% of AMI	<u>69.4%</u>	<u>62.9%</u>	<u>-6.5%</u>
Maplewood	At or below 30% AMI	9.6%	9.7%	0.0%
	31% to 50% of AMI	<u>32.7%</u>	<u>27.5%</u>	<u>-5.3%</u>
	51% to 80% of AMI	<u>57.7%</u>	<u>62.9%</u>	<u>+5.2%</u>

• Step 2: Calculate the share of the total allocation going to each band, adjusting for the differences calculated in Step 1.

To determine the share of each community's allocation that should go to each band, we start with the "equal share" factor from the regional Need (Column A in Table B-5), then add the adjustment developed in Step 1. For example, 49.9% of the region's total Need lies in the 0-30% band; this is the starting point for all communities. In Chanhassen, where the share of existing affordable units in this band is lower than average, the adjustment is +7.5%, which yields an adjusted share of 57.4%. In Maplewood, where the share of existing affordable units in this band is about average, the adjustment is very small, which yields an adjusted share of 49.9% (the average share). The final shares, in Column D, reflect benchmarking to attain the regional Need in each band.

Page - 39 | METROPOLITAN COUNCIL

_

 $^{^{12}}$ Entries may not equal the difference between Columns A and B due to rounding.

Table B-5. Calcuation of Shares for Band Breakdown

	<u>Band</u>	(A) <u>"Equal</u> share" for each band	(B) Adjustment from Step 1	(C) Adjusted share of allocation to place in band (A + B)	(D) Share of allocation to place in band (benchmarked) ¹³
Chan-	At or below 30% AMI	49.9%	<u>+7.5%</u>	57.4%	<u>57.4%</u>
<u>hassen</u>	31% to 50% of AMI	24.9%	<u>-1.0%</u>	24.0%	23.4%
	51% to 80% of AMI	25.2%	<u>-6.5%</u>	<u>18.7%</u>	19.2%
Maple-	At or below 30% AMI	49.9%	0.0%	49.9%	49.7%
wood	31% to 50% of AMI	24.9%	<u>-5.3%</u>	<u>19.7%</u>	<u>19.1%</u>
	51% to 80% of AMI	25.2%	+5.2%	30.4%	<u>31.2%</u>

Step 3: Apply the shares from Step 2 to the total allocation from Part 2.
 In this step, we use these shares (Column D of Table B-5) to break the total allocation developed in Step 2 of Part 2 into the bands of affordability.

The resulting allocations in each band, shown below in Table B-6, address the differences in affordability within the set of affordable units in each community while maintaining the total allocation that address the differences in affordability (as well as job/worker balance) across communities.

For example, Chanhassen's total allocation is higher than Maplewood's, largely because Chanhassen has a lower share of existing affordable housing than Maplewood does. But because a higher share of Chanhassen's existing affordable units lie in the 51-80% band than in Maplewood, Chanhassen's allocation in the 51-80% band is reduced, and Maplewood's allocation in the 51-80% band is increased, such that Chanhassen's allocation in this band is actually lower than Maplewood's.

¹³ Entries are calculated by using the shares in Column C to calculate the number of units in each band in each community, then adjusting those numbers so that they add up to the regional Need in each band. We omitted those intermediate calculations from Table B-6 for brevity; the point is that the resulting shares, shown in Column D, are those needed to attain the regional Need in each band.

Table B-6. Calculation of Allocation for Each Band

	Band	(A) Total allocation from Part 2	(B) Share of regional Need in each band	(C) Band breakdown shares from Step 2	(D) Allocation in each band (A × C)

^{*} Column K includes an adjustment to make all communities' allocations sum to 37,900 units (the regional Need), so it is not the exact sum of Columns D, I, and J. ** Cities that are split between two counties are shown in the county with the largest share of households.

¹ Source: Forecasts developed by Metropolitan Council Environmental Services with input from Council Research staff, and supplemented by Council Research estimates of growth in municipal-serviced areas. For more information, see footnote 8 of Appendix B.

These numbers are rescaled Z-scores based on the measures in Column E and Column F. Communities will have their allocations adjusted upward (positive values in Columns G or H) if they have lower-than-average values in Column E (indicating less affordable housing) or higher-than-average values in Column F (indicating that they import workers in low-wage jobs). Communities will have their allocations adjusted downward (negative values in Columns G or H) if they have higher-than-average values in Column E (indicating more affordable housing) or lower-than-average values in Column F (indicating that they export workers in low-wage jobs).

Housing stock affordability: The percentage of a community's total housing units that is affordable to low-income households (those with income at or below 80% of Area Median Income), including unsubsidized and publicly subsidized units. In the average sewered community, 66.4% of housing units are affordable to low-income households.

⁴ Job/Worker Balance: The ratio of low-wage jobs located within five miles of the community's geographic center divided by the number of residents within this distance whose primary job is a low-wage job. In the average sewered community, the ratio is 1.08.

^{*} Column K includes an adjustment to make all communities' allocations sum to 37,900 units (the regional Need), so it is not the exact sum of Columns D, I, and J.
** Cities that are split between two counties are shown in the county with the largest share of households.

Source: Forecasts developed by Metropolitan Council Environmental Services with input from Council Research staff, and supplemented by Council Research estimates of growth in municipal-serviced areas. For more information, see footnote 8 of Appendix B.

These numbers are rescaled Z-scores based on the measures in Column E and Column F. Communities will have their allocations adjusted upward (positive values in Columns G or H) if they have lower-than-average values in Column E (indicating less affordable housing) or higher-than-average values in Column F (indicating that they import workers in low-wage jobs). Communities will have their allocations adjusted downward (negative values in Columns G or H) if they have higher-than-average values in Column E (indicating more affordable housing) or lower-than-average values in Column F (indicating that they export workers in low-wage jobs).

³ Housing stock affordability: The percentage of a community's total housing units that is affordable to low-income households (those with income at or below 80% of Area Median Income), including unsubsidized and publicly subsidized units. In the average sewered community, 66.4% of housing units are affordable to low-income households.

⁴ Job/Worker Balance: The ratio of low-wage jobs located within five miles of the community's geographic center divided by the number of residents within this distance whose primary job is a low-wage job. In the average sewered community, the ratio is 1.08.

^{**} Cities that are split between two counties are shown in the county with the largest share of households.

Shows the share of all housing units *affordable to households with income at or below 80% of AMI* in each band of affordability. Percentages may not sum to 100% due to rounding. In the average sewered community, 10% of all affordable units are affordable at or below 30% of AMI; 27% are affordable at 31% to 50% of AMI; and 63% are affordable at 51% to 80% of AMI.

² Shows the share of the total allocation assigned to each band, as developed by Part 3 of the allocation process. The 0-30% band is 49.9% of the regional Need, the 31-50% band is 24.9% of the regional Need, and the the 51-80% band is 25.2% of the regional Need.

^{**} Cities that are split between two counties are shown in the county with the largest share of households.

Shows the share of all housing units affordable to households with income at or below 80% of AMI in each band of affordability. Percentages may not sum to 100% due to rounding. In the average sewered community, 10% of all affordable units are affordable at or below 30% of AMI; 27% are affordable at 31% to 50% of AMI; and 63% are affordable at 51% to 80% of AMI.

² Shows the share of the total allocation assigned to each band, as developed by Part 3 of the allocation process. The 0-30% band is 49.9% of the regional Need, the 31-50% band is 24.9% of the regional Need, and the the 51-80% band is 25.2% of the regional Need.

^{iv} U.S. Census Bureau, 2008-20122009-2013 American Community Survey Public Use Microdata Sample.

^v U.S. Census Bureau, 2008-20122009-2013 American Community Survey Public Use Microdata Sample.

This estimate of unsubsidized affordable owner-occupied units was calculated using 2013 and 2014 MetroGIS Regional Parcel Datasets to identify units whose assessed value would produce monthly mortgage payments (including principal, interest, property taxes, and insurance) at or below 29% of the monthly household income of a household earning 80% of the area median income. This estimate of unsubsidized affordable rental units was calculated using the 2007-2011 Comprehensive Housing Affordability Strategy (CHAS) data. The resulting counts were adjusted for consistency with the Council's annual estimates of housing units, tenure distributions from the 2013 American Community Survey, and the affordability distribution of rental units from the 2013 American Community Survey Public Use Microdata Sample.

This forecast looks at new households earning less than 80% of AMI and excludes seniors who own their home free and clear and are not cost-burdened. Including those, the number is 73,600 56,400.

viii For a full definition of entitlement communities, see the Glossary in the Appendices.) Entitlement communities in our region are Anoka, Dakota, Hennepin, Ramsey, and Washington counties and the cities of Bloomington, Coon Rapids, Eden Prairie, Minneapolis, Minnetonka, Plymouth, Saint Paul, and Woodbury.

This forecast looks at new households earning less than 80% of AMI and excludes seniors who own their home free and clear and are not cost-burdened. Including those, the number is 73,600 56,400.

Affordable home prices are Metropolitan Council staff calculations of the purchase prices at which estimated monthly mortgage payments—including principal, interest, property taxes, and insurance—are no more than 29% of the monthly income for a household of four with the given income. The Council assumed a 3.97% interest rate (the Midwestern average for 2013) and other standard mortgage assumptions: a 3.5% downpayment, a property tax rate of 1.25% of property sales price, mortgage insurance at 1.35% of unpaid principal, and \$100/month for hazard insurance. Household income values are the income limits for 2013 calculated by the U.S. Department of

Housing and Urban Development based on the median family income for the 13-county Minneapolis-Saint Paul-Bloomington metropolitan statistical area.
