

Equity Nudge & 2022 Annual Use Estimates

Darcie Vandegrift, PhD, Principal Researcher

Metropolitan Parks and Open Space Commission
July 13, 2023

To understand people's relationships with the regional system, use multiple data sources: Part 1

Use Estimates

- Show visitation patterns across types of units
- No information is known about who visitors are, preferred activities, barriers to use

Visitor Study

- Provides detailed demographics, activities, some information on barriers
- No detailed stories; not a holistic understanding; no unit level data

Qualitative research

- In-depth understanding of young people and nonusers' motivations, needs, concerns.
- Doesn't generalize; requires significant time investment.

To understand people's relationships with the regional system, use multiple data sources: Part 2

Streetlight or LBS

- LBS = Location-Based Services data
- Inferred demographics for individual units and entire region.
- Uncertain reliability and validity
- No data after 2022

Park Agency Engagement

- Provides detailed information about community needs, including potentially nonusers and prioritized groups.
- Less widely shared; questions are guided by long-range planning requirements.

Council Engagement

- Focus on needs of prioritized groups, focuses on how users experience park/trail visitation
- Limited capacity; does not replace on the ground expertise of park agencies or rigor of research-based efforts.

Research to support equitable use

Needs:

- A variety of approaches
- Ongoing check-ins about research frameworks with policy makers, community
- Connection with community experts
- Time and intention to share widely
- Opportunities for community experts to speak to policy makers directly
- A commitment to high-quality research design
- Guidance from policy makers about research priorities
- Compliance with statutory research requirements
- Commitment and enthusiasm to learn from the work of others

Use Estimates Background

- Produced annually since 1995.
- Used in formulas to calculate each implementing agency's share of Regional Parks & Trails System grant program dollars
- Allows for monitoring trends over time
- One of two ongoing research responsibilities: Other is Visitor Study, approximately every 5 years

2022 Annual Use Estimates

- The estimates include data from 128 regional parks, trails, park reserves and special recreation features.
- Second year of multipliers from the 2021 Visitor Study
- Annual estimated visitation is one way to demonstrate the value of the Regional Park System. Others include climate mitigation and public health benefits

Calculating Annual Use Estimates

Raw Counts

- Parks staff count all people entering all parks and trails at designated locations
- Schedule has randomized times, days, and entrances, Memorial Day to Labor Day

Expansion

- Averaged with previous three years to account for weather, flooding
- Counts are “expanded” to apply to all days and entrances

Special Events / Camping

- Agency-submitted special event, camping use is added in
- Estimated non-summer use based on 2021 Visitor Study multipliers

Annual Visits to the Regional System

Number of estimated visits

Note:
We caution against making direct comparisons across sets of estimates.

Source: Metropolitan Council's annual parks use estimates (July 2023).

Special events are rebounding

- Special events increased by 676,000 in 2022
- Not yet equal to pre-pandemic levels

Number of special events visits (in millions)

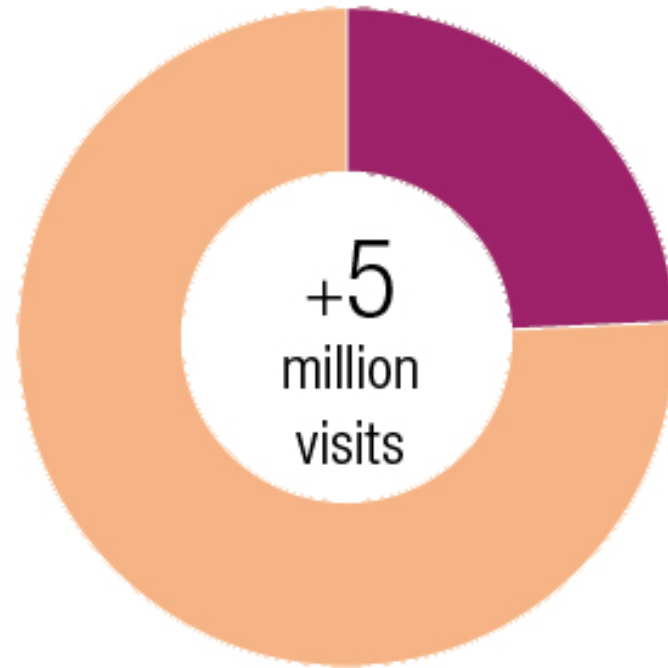

Source: Metropolitan Council's annual parks use estimates (July 2023).

Visits at trails drive visitation increases

- 15 miles of trail added since 2019; now over 400 miles, up from about 350 miles in 2016.
- **Trail visits** grew by **14%** between 2021 and 2022, while the change in **visits at parks** increased by just **3%**.

Trail visits are **24%** of all estimated visit increase between **2017 and 2019**.

Trail visits are **61%** of all visit growth between **2021 and 2022**.
