

APPENDIX C

LONG-RANGE HIGHWAY AND TRANSIT CAPITAL PROJECT LIST

Appendix C was developed at the request of the U.S. Department of Transportation Federal Highway and Federal Transit Administrations and consists of a list of potential major capital highway and transit projects. The projects included in this list will be planned and implemented by either the Minnesota Department of Transportation (highways) or the Metropolitan Council/Metro Transit (transit). This list does not include projects on the local highway system or non-transitway systems; those projects are identified through the local planning process for county- and city-owned highways, and through specific transit improvement projects are usually funded through the Regional Solicitation and listed in the [Transportation Improvement Program \(TIP\)](#).

All known regionally significant local projects are included in the Transportation Improvement Program, and Appendix E, Additional Air Quality Information. The federally required Transportation Improvement Program (TIP) for the Greater MSP region – as defined by the U.S. Census Bureau and the Metropolitan Council to consist of the seven counties of Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington, the contiguous urbanized areas of Wright and Sherburne counties, and a portion of Houlton, Wis. – is updated each year by the Transportation Advisory Board and the Metropolitan Council. The federal transportation bill, Fixing America’s Surface Transportation (FAST) Act, requires that all federally funded transportation projects within the Twin Cities region be included in the four-year TIP. The TIP is prepared by Metropolitan Council staff with assistance from the Minnesota Department of Transportation. It is a fiscally constrained four-year program for project delivery, which means anticipated revenues and estimated project costs balance over the four-year period covered by the TIP. The current [Transportation Improvement Program](#) is available on the Metropolitan Council website.

The list here is intended to be changed through updates and amendments to the Transportation Policy Plan. Appendix C is not a project programming document and cannot be interpreted as a programming document. Appendix C summarizes known projects in the current revenue scenario; this is the long-range transportation planning scenario where known project costs are equal to anticipated revenues (also called the fiscally constrained plan in federal regulations). Appendix C summarizes the project’s primary investment category, project location (called “Route”), project description, for projects within the first ten years estimated cost in year of expenditure dollars, and approximate implementation timeframe.

This list is intended to be exhaustive for Highway MnPASS, Strategic Capacity Enhancements, and Transitways only. When new projects are identified for funding in these three categories, they must be amended into the Transportation Policy Plan, this appendix, and any other applicable sections of the plan. The projects listed in the other categories are examples of the types of projects to be funded in these categories and in the timeframes identified. Some projects in these other categories may be

regionally significant for air quality analysis and thus require plan amendments prior to funding and construction. For more information contact Metropolitan Council long-range transportation planning staff.

Long-Range Highway Capital Projects 2020-2040

The Minnesota Department of Transportation provided the list of projects to be included in the Current Revenue Scenario for the 2040 Transportation Policy Plan. The list was based on work done initially for the Minnesota State Highway Investment Plan 2018-2037 (MnSHIP) published in January 2017 and updated with more current project information when it was available. Projects here are assigned to timeframes: 2024-2029 and 2030-2040. Projects from 2020-2023 are listed in Appendix B, Transportation Improvement Program.

This list is not directly comparable to Chapter 4: Transportation Finance [insert link] in that these projects reflect construction cost only while those in Chapter 4 also include internal agency costs necessary to deliver projects (e.g. design, right of way, planning, project management, etc.), during the 2024-2029 time-period generally only preservation projects have been identified and beyond 2029 cost estimates are not available given the more general understanding that exists of these projects. This list is not intended to be exhaustive for all categories except MnPASS and Strategic Capacity Enhancements. For all other categories, the 2040 Transportation Policy Plan Highway Investment Direction and Plan anticipates funding that exceeds anticipated project costs identified here.

Long-Range Transit Capital Projects

The Metropolitan Council (including Metro Transit), local governments including cities and counties, and the suburban transit providers worked together to develop the list of transit projects included in the current revenue scenario. The list of projects includes only those projects for which potential funding sources, transit mode, and route alignment are identified in the plan. The plan anticipates funding that exceeds anticipated project costs identified in the Transitway System Investments category. Transitway projects will be added to this list through future plan updates and amendments. For multi-year projects with expenditures prior to or across multiple timeframes, this appendix lists the total estimated project cost, including already spent funds.

Transit Investment Category	Route	Project Description	Estimated Cost (Year of Expenditure)	Timeframe
Transitway System	METRO Orange Line	17-mile highway bus rapid transit improvement (six new stations planned, buses, technology) on I-35W south from Minneapolis to Burnsville.	\$150,800,000	2020-2029
Transitway System	METRO Green Line Extension	15-mile light rail extension of the Green Line with plans to include 15 new stations from Minneapolis to Eden Prairie.	\$2,003,000,000	2020-2029
