## Minutes of the

REGULAR MEETING OF THE TAC FUNDING \& PROGRAMING COMMITTEE
Thursday, March 21, 2019
Committee Members Present: Paul Oehme (Chair, Chanhassen), Joe MacPherson (Anoka County), Lyndon Robjent (Carver County), Jason Pieper (Hennepin County), Joe Lux (Ramsey County), Craig Jenson (Scott County), Emily Jorgensen (Washington County), Elaine Koutsoukos (TAB), Steve Peterson (Metropolitan Council), Anna Flintoft (Metro Transit), Shaker Rabban (MnDOT Metro District), Colleen Brown (MnDOT Metro District State Aid), Innocent Eyoh (MPCA), Gina Mitteco (MnDOT Bike \& Ped), Nancy Spooner-Mueller (DNR), Jen Lehmann (MVTA), Robert Ellis (Eden Prairie), Jim Kosluchar (Fridley), Ken Ashfeld (Maple Grove), Nathan Koster (Minneapolis), Anne Weber (St. Paul)

Committee Members Absent: John Sass (Dakota County), Karl Keel (Bloomington), Michael Thompson (Plymouth)

## I. CALL TO ORDER

A quorum being present, Committee Chair Oehme called the regular meeting of the Funding \& Programming Committee to order at 1:31 p.m. on Thursday, March 21, 2019.

## II. APPROVAL OF AGENDA

It was moved by Lehmann and seconded by Ashfeld to approve the agenda. Motion carried unanimously.

## III. APPROVAL OF MINUTES

It was moved by Eyoh and seconded by Lux to approve the minutes of the February 21, 2019, regular meeting of the Funding \& Programming Committee. Motion carried unanimously.

## IV. TAB REPORT

Koutsoukos reported on the March 20, 2019, TAB meeting.

## V. BUSINESS

VI. INFORMATION

1. TIP Amendment and TPP Administrative Modification: Performance Measures

Barbeau said that the TAC Planning Committee recommended to TAC approval of pavement and bridge performance measures and system performance and CMAQ performance measures. David Burns from the Metropolitan Council shared language on those same measures that was recommended by the TAC Planning Committee for an administrative modification to the Transportation Policy Plan (TPP). Also included was updated Safety Performance Measure language. Koster pointed out that the fatalities threshold in that measure was increasing, to which Burns replied that MnDOT's process was used and 2018 saw a significant increase in fatal and serious injury crashes.

Eyoh asked how the 6,800 kilograms per day of mobile-source emissions was arrived at for existing performance. Burns replied that the impact of the TIP is measured as it relates to mobile-source emissions.

Kosluchar asked how to address increasing non-motorized fatalities, to which Burns replied this information informs the Council's processes.

Mitteco suggested that the goals seem more like trends and asked whether this is a disincentive to work toward meaningful goals. Koutsoukos replied that safety scoring could change as a result.

Robjent suggested showing the base year data as a way to clarify how the measures were arrived upon.
2. Regional Solicitation Before and After Study

Lance Bernard from HGKI and Marie Cote from SRF provided a presentation on the Regional Solicitation Before and After study.
3. Regional Solicitation Feedback and Preparation for 2020

Barbeau shared results of the 2018 Regional Solicitation surveys that were provided to TAB members; TAC and Funding \& Programming Committee members; applicants; and scoring committee members. He then shared results of the 2018 Regional Solicitation sensitivity analysis.

Mitteco said that it is difficult to score trail reconstruction projects. Robjent suggested having applicants share their trail maintenance plans. Brown suggested determining whether a trail met its useful life.

Robjent said that on interchange projects, applicants get credit for the traffic on the freeway, which makes interchanges very difficult to compete with.

## VII. OTHER BUSINESS

## VIII. ADJOURNMENT

It was moved by MacPherson and seconded by Eyoh, to adjourn the meeting.
Motion carried unanimously and the meeting adjourned.
Joe Barbeau
Recording Secretary

# ACTION TRANSMITTAL No. 2018-26 

DATE:
TO:
PREPARED BY: Joe Barbeau, Senior Planner (651-602-1705)
SUBJECT:

REQUESTED
ACTION:

RECOMMENDED MOTION:

May 9, 2019
TAC Funding and Programming Committee

Adoption of the Draft 2020-2023 Transportation Improvement Program (TIP) for release for a public comment period.
The Metropolitan Council requests that the Transportation Advisory Board (TAB) adopt the draft 2020-2023 Transportation Improvement Program (TIP) for release for a public comment period.
That the TAC Funding \& Programming Committee recommend to TAC adoption of the draft 2020-2023 Transportation Improvement Program (TIP) for release for a public comment period.

BACKGROUND AND PURPOSE OF ACTION: The Transportation Improvement Program (TIP) is a four-year list of federally funded transportation projects required for all metropolitan planning organization s (MPOs). The TIP must include all projects funded with federal transportation funds and projects that affect air quality. Federal regulations require that a TIP be developed at least every four years. The Metropolitan Council revises its TIP every year in conjunction with the Minnesota Department of Transportation's State Transportation Improvement Program (STIP). The draft 20192022 TIP and its development process will meet applicable federal requirements once the public input process is complete. The public comment period is scheduled to run from June 25 to August 9.

The 2020-2023 TIP approval schedule is as follows:

- June 19, 2019 - TAB approves draft TIP for public review
- August 9, 2019 - Public review/comment period ends
- August 21, 2019 - TAB considers public comments and approval of the final TIP
- September 9, 2019 - Transportation Committee recommends concurrence with the TIP to the Metropolitan Council
- September 25, 2019 - Metropolitan Council concurrence with TAB approval of TIP
- September/October, 2019 - MnDOT inclusion of TIP into State Transportation Improvement Program (STIP)
- Roughly November 1, 2019 - USDOT approves Minnesota STIP

The 2020-2023 TIP includes projects valued at approximately $\$ 5$ billion for highway, freight transit, bicycle, and pedestrian projects. Roughly $17 \%$ this is from the Regional Solicitation. The sources of funds over the four years are summarized as follows:

- Total - \$5 Billion
o Federal Highway - \$1.3 Billion
o Federal Transit - \$1.3 Billion
o Property Tax and State Taxes - $\$ 2$ Billion
o Trunk Highway - \$466 Million

RELATIONSHIP TO REGIONAL POLICY: Federal law requires that all transportation projects that will be partially funded with federal funds must be in an approved Transportation Improvement Program and meet the following four tests: fiscal constraint; consistency with the adopted regional transportation plan; air quality conformity and opportunity for public input. It is the TAB's responsibility to adopt and amend the TIP according to these four requirements.

## Transit Funding in the TIP

Both transit capital and operating projects are in the TIP and are funded almost exclusively by four federal sources:

- FTA formula funds: The largest source of funds allocated to the Council as the major transit operator in the region.
- Regional Solicitation funds: Projects funded with FHWA flexible funds - CMAQ or STPBG - that are allocated through the Regional Solicitation process. These funds are transferred from FHWA to FTA during the grant-making process.
- FTA and DOT discretionary award funds: Bus and Bus Facilities and Low No Emission Grants are FTA discretionary award programs. The Better Utilizing Investments to Leverage Development (BUILD) is a USDOT discretionary award. The Council has received all these types of discretionary awards in the past. New discretionary awards are amended into the TIP when the awards are announced by the federal agency.
- FTA New Starts/Small Starts funding (Section 5309): This is funding for major Capital Improvement Grants (CIG) and has funded the Blue Line, Northstar, the Green Line, and the Orange Line. Future programs funded with CIG funds include the Green Line Extension, the Blue Line Extension, and the Gold Line BRT transitways.

Regional Solicitation transit awards in the TIP include

- SouthWest Transit creation of transit connector route between Eden Prairie and the Mall of America, including additional buses and operating funds;
- Metro Transit creation and expansion of St. Paul bus routes including additional buses and operating funds;
- Travel Demand Management (TDM)/transportation management organization (TMO) projects;
- Route 724 transit service expansion;
- Route 68 transit service expansion;
- Route 32 transit service expansion;
- Route 4; transit service expansion;
- SouthWest Transit mobility hub at SouthWest Station;
- Orange Line connector bus service;
- Route 6 corridor bush and stop modernization;
- Chicago-Portland Avenue corridor bus stop modernization;
- Emerson and Fremont Avenue bus stop modernization; and
- Lake Street - Marshall Avenue corridor bus stop modernization

Projects that are not discretionary or CIG are selected from the Metropolitan Council Transit Capital Improvement Program (CIP) for inclusion in the TIP. The CIP is published for public comment before adoption by the Council. Federal formula funds are then used to fund these projects as follows:

- Section 5307 - Funding for any improvement or rehabilitation of preservation projects, fleet vehicle procurement and new capital projects. This is the most flexible funding.
- Section 5310 Mobility of Seniors and Individuals with Disabilities Program - This program funds the purchase of lift-equipped vehicles by nonprofit organizations that provide transportation for seniors and individuals with disabilities. This can include projects specifically designed to meet the needs of seniors and individuals with disabilities, transit projects that exceed ADA standards, and transit projects that improve access to fixed-route transit and decrease reliance on paratransit.
- Section 5337 State of Good Repair - Funding for preservation projects only. This funding has two parts:
o High Intensity Fixed Guideway - Funding used for fixed guideway preservation including light rail and commuter rail, i.e., LRV overhaul/maintenance, rail maintenance, locomotive or other commuter rail preservation. Funding may also be used for preservation of BRT on BRT-dedicated roadway (not shoulders or HOV lanes).
o High Intensity Bus - Funding used for bus and bus facilities preservation including bus replacement and maintenance, passenger facility rehabilitation, and park and ride maintenance and rehabilitation.
- Section 5339 Bus and Bus Facility - Funding used for replacement bus procurement, bus maintenance and other bus facilities improvements or rehabilitation.

The TIP only includes those transit projects that are federally funded. Therefore, looking only at the TIP does not provide a picture of all transit capital projects as some projects are funded with only local funds. These projects will not appear in the TIP.

The contents of this document reflect the views of the Metropolitan Planning Organization (MPO), which is responsible for the facts or accuracy of the data presented herein. The contents do not necessarily reflect the official views of the U.S. Department of Transportation. The report does not constitute a standard, specification or regulation.

## 2020-2023 TRANSPORTATION IMPROVEMENT PROGRAM

SUMMARY

The Metropolitan Council, which serves as the Metropolitan Planning Organization for the Twin Cities Metropolitan Area, is required by federal law to annually produce a program, known as the Transportation Improvement Program (TIP), that outlines funded projects within the metropolitan planning area. The 2020 through 2023 TIP responds to procedures required by the Fixing America's Surface Transportation Act (FAST Act) and the United States Code of Federal Regulations (23 CFR 450.326). The legislation requires that all transportation projects that are either wholly or partially funded with federal monies within the metropolitan planning area (Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington counties plus the contiguous urbanized areas ${ }^{1}$ in parts of Sherburne and Wright Counties along with Houlton, Wisconsin) be included in the region's TIP. The TIP must be consistent with the projections of federal funds and local matching funds for this time period. All major transportation projects located in the federally defined carbon monoxide non-attainment area must be evaluated for their conformity with the Clean Air Act (CAA) Amendment of 1990. The air quality conformity analysis must include all federally funded, as well as regionally significant, locally funded projects.

The 2020-2023 TIP for the Twin Cities Metropolitan Area includes projects valued at approximately $\$ 5$ billion for highway, freight, transit, bicycle, and pedestrian projects. Of this total, approximately $\$ 1.3$ billion is supplied by federal highway funds, including Federal Highway Target funds and High Priority Project funds. The 2020-2023 TIP assumes the region will receive approximately $\$ 1.3$ billion in federal transit funds over the 2020-2023 period for transit projects.

The Transportation Advisory Board (TAB) to the Metropolitan Council hosts a public comment period on the TIP prior to adoption. Notice of the public comment period is printed in the Minneapolis Star Tribune newspaper and emailed to groups representing a diverse set of stakeholders. The notifications and process are carried out consistent with the Council's Public Participation Plan. The TAB considers and responds to public comments received on the draft TIP prior to adopting the final TIP.

The 2020-2023 TIP implements, and is consistent with, the region's long-range transportation plan (LRTP), titled the Transportation Policy Plan (TPP), adopted by the Metropolitan Council on October 24, 2018 (with amendments on $2 / 2719$ and 4/24/19 still pending USDOT approval), with FHWA/FTA conformity determination established on December 13, 2018. The inclusion of a specific project in the TIP does not imply an endorsement of the specific design alternative or engineering details. Inclusion in the TIP is a funding commitment that assumes the project's development process has addressed all local, state, and federal requirements.

The 2020-2023 TIP will be fiscally constrained, is consistent with the Transportation Policy Plan, will be in conformity with the Clean Air Act Amendments of 1990, and its development process will provide acceptable opportunity for public involvement.

[^0]
## 1. INTRODUCTION

The 2020-2023 Transportation Improvement Program (TIP) for the Twin Cities Metropolitan Area (shown in Figure 1, including Houlton, Wisconsin, and parts of Wright and Sherburne Counties) is the multimodal program of highway, transit, bicycle, and pedestrian projects and programs proposed for federal funding throughout the metropolitan planning area over the fouryear period. The TIP is prepared by the Metropolitan Council and its Transportation Advisory Board (TAB) in cooperation with the Minnesota and Wisconsin's Departments of Transportation (MnDOT and WisDOT). The projects listed in the TIP are consistent with and implement the region's transportation plan and priorities.

## Federal Requirements and Regional Planning Process

Federal regulations require that a Transportation Improvement Program:

- Be developed and updated at least every four years.
- Cover a period of at least four years.
- Be a product of a continuing, comprehensive, and cooperative (3C) planning process.
- Be consistent with regional land use and transportation plans and the State Implementation Plan (SIP) for air quality.
- Fulfill requirements of the March 14, 2012, final rule as required by the U.S. Environmental Protection Agency (EPA), Transportation Conformity Rule.
- Identify transportation improvements proposed in the region's long-range transportation plan (titled the Transportation Policy Plan), and recommended for federal funding during the program period.
- Contain projects that are from a conforming regional metropolitan transportation plan that is fiscally constrained. The TIP must be approved by the Federal Highway Administration and the Federal Transit Administration.
- Be fiscally constrained, which means that total project costs and anticipated revenues balance.
- Be initiated by locally elected officials of general-purpose governments.
- Include both highway and transit projects.
- Allow opportunities for public participation.
- Reflect the priorities in the metropolitan planning area.
- Indicate the years in which initial contracts will be let.
- Identify the sources of federal funds.
- Include realistic estimates of total costs and revenues for the program period.
- Fulfill requirements of the Executive Order 12898 on Environmental Justice.

The 2020-2023 TIP for the Twin Cities Metropolitan Area will meet all of these requirements and will be submitted to the Minnesota and Wisconsin Departments of Transportation for inclusion in their respective State Transportation Improvement Programs (STIPs) approved by the Governor's designees, the Commissioner of Transportation (MN) and the Secretary of Transportation (WI).

The Twin Cities Metropolitan Area Metropolitan Planning Organization (MPO) certifies that it is in conformance with the provisions of 49 CFR Part 20 regarding lobbying restrictions on influencing certain Federal activities.

Figure 1: Twin Cities Metropolitan Area Political Boundaries - Also includes parts of Sherburne and Wright Counties (MN) and St. Croix County (WI)

The following information is provided for each project receiving federal funds and listed in Appendix A:

- Program year
- Parent project (only in final TIP)
- Route
- Project number
- MnDOT program category
- Description of the project scope
- Estimated total funding in each year of the TIP along with the amount of federal funds proposed to be obligated
- Amount of advanced construction (AC, see page 27) funds dedicated to the project in the program year
- Amount of federal, state, and other (usually local) funds dedicated to the project
- Name of the state, regional, or local agency receiving the federal funding and responsible for carrying out the project
- Air quality analysis category

The transportation planning process in the Twin Cities Metropolitan Area is based on Minnesota Statutes and requirements of federal rules and regulations on urban transportation planning that first became effective June 30, 1983, when they were published in the Federal Register. The Metropolitan Council is the designated MPO for the Twin Cities metropolitan area and is responsible for completing the continuing, comprehensive, and cooperative (3C) transportation planning process, as defined in Title 23, Section 450.306 of the US Code of Federal Regulations (CFR). Since transportation planning cannot be separated from land use and development planning, the transportation planning process is integrated with the total comprehensive planning program of the Metropolitan Council. With the advent of Intelligent Transportation Systems (ITS), the planning process has been expanded to include technology deployment. As of 2005, as defined in 23 CFR 450.306, the coordination of technology with the planning process is now required.

The Twin Cities regional transportation planning process is defined in the 2018 Memorandum of Understanding between MnDOT and the Metropolitan Council. Administered and coordinated by the Metropolitan Council, this process is a continuing, comprehensive, and cooperative effort, involving municipal and county governments, the Metropolitan Airports Commission (MAC), MnDOT, the Minnesota Pollution Control Agency (MPCA), transit operators, the Federal Highway Administration (FHWA), and the Federal Transit Administration (FTA). Local elected government officials participate in the process through the Transportation Advisory Board (TAB). The TAB is a forum for the cooperative deliberation of state, regional, and local officials, intermodal interests, and private citizens. Metro Transit and suburban transit provider representatives are members of the TAB's Technical Advisory Committee (TAC). They participate in planning through the capital and service improvement planning processes coordinated by the Metropolitan Council.

In 2019, the Minnesota Department of Transportation adopted the Statewide Regional ITS Architecture, which was subsequently adopted by all MPOs in Minnesota, including the Metropolitan Council. A Regional ITS Architecture provides a vision of how ITS and ITS projects can be deployed to satisfy the goals and objectives outlined in the TPP and serves as a visible demonstration of the institutional dependencies that exist in a region and how agencies can benefit from each other's activities. As needed, the Council coordinates with MnDOT and regional partners to ensure successful ITS integration. The Architecture relates to Title 23, Section 450.306 of the CFR, specifically that the metropolitan transportation 3C planning process shall provide for consideration and implementation of projects, strategies, and services that will address a list of factors, including:

- Subsection (b)(6): Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight.
- Subsection (d) (4) (vii): An MPO shall integrate in the metropolitan transportation planning process, directly or by reference, the goals, objectives, performance measures, and targets described in other State transportation plans and transportation processes, as well as any plans developed under 49 U.S.C. chapter 53 by providers of public transportation, required as part of a performance-based program including the congestion management process as defined in 23 CFR 450.322, if applicable.
- Subsection (g): The metropolitan transportation planning process shall (to the maximum extent practicable) be consistent with the development of applicable regional intelligent transportation systems (ITS) architectures, as defined in 23 CFR part 940.

Similarly, 23 CFR 450.208 calls for the coordination of data collection and analyses with MPOs and public transportation operators to support statewide transportation planning and programming priorities and decisions.

## The Minnesota Statewide Regional ITS Architecture:

- Provides MPOs with a useful planning tool for managing ITS funding decisions (Volume 9/ITS Initiatives and Project Concepts for Implementation).
- Improves continuity across the project life cycle, from planning through project development and operations.
- Meets the intent of 23 CFR 940.9.b ("Any region that is currently implementing ITS projects shall have a regional ITS architecture by April 8, 2005.").
- Formal adoption adds credibility to the Regional ITS Architecture and allows planners to use aspects of the regionally-agreed upon ITS architecture.
- By establishing the process, tools, and support for architecture use and maintenance in these plans, the MPO can ensure financial support for these critical activities.

## Public Participation Opportunities in Preparation of the Transportation Improvement

 ProgramA concerted effort is made to ensure all interested and concerned parties are offered an opportunity to participate in the preparation of the TIP. TAB is accepting public comment on the draft TIP. The following is the schedule of public comment opportunities prior to adoption of the TIP.

- June 19, 2019 - A public meeting of the TAB where it will adopt the draft TIP for the purpose of public comment.
- June 25 through August 9, 2019 - The TAB will accept public comments submitted by email, telephone, fax, and mail.
- August 21, 2019 - A public meeting of the TAB where public comments will be reviewed, and the TIP will be adopted by the TAB and forwarded to the Metropolitan Council for concurrence.

In preparation, the Metropolitan Council published a public notice in a newspaper of regional circulation and on metrocouncil.org. In addition, staff will notify groups representing a diverse set of stakeholders about the public comment period. Interested parties can sign up to see email alerts at www.metrocouncil.org.

For TIP Amendments (discussed on page 13) public input opportunities are offered at board and committee meetings, during which they are presented as business items. Amendments for regionally-significant projects require a 21-calendar-day public comment period to begin after

TAB releases the amendment for public comment. The comment period is only required for regionally-significant projects that are not currently in the TIP or are changing any project element that requires a new conformity determination.

Metro Transit is using the TIP's public involvement process to satisfy the public participation requirements of the FTA Section 5307 projects. The TIP serves as the FTA Section 5307 program of projects.
Development and Content of the Transportation Improvement Program
The TIP is an integral part of the overall regional transportation planning and implementation process. TIP preparation is a cooperative effort among local units of government and metropolitan and state agencies.

The planning base from which projects are identified and developed for the TIP includes the following plans:

- Thrive MSP 2040 establishes the regional outcomes and physical and development policy framework for seven counties within the Twin Cities Metropolitan Area (Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washíngton counties). Thrive MSP 2040, adopted in 2014, serves as the metropolitan development guide that provides the overarching vision for development of the region.
- The region's long-range transportation plan, the 2040 Transportation Policy Plan (TPP), is one of the four system plans within Thrive MSP 2040. It sets the regional transportation policy for all of the Council's planning area - including urbanized portions of Sherburne and Wright Counties and Houlton, Wisconsin - and identifies the major, long-range transportation investments. The 2040 TPP was adopted in 2018 and addresses all applicable FAST Act requirements and considerations.
- The Council's Public Participation Plan.
- The Minnesota State Highway Investment Plan 2018-2037 (MnSHIP), developed by the Minnesota Department of Transportation, includes the district work plans, which set the investment priorities for the state highway system in the eight-county MnDOT Metro District (includes Chisago County).
- The Highway Systems Operations Plan 2012-2015 (HSOP), developed by MnDOT, includes the operations and maintenance investment priorities for the state highway system.
- Local comprehensive plans and transportation programs, which include transportation plans that - within the seven-county region only - must be consistent with the regional transportation plan developed by the Metropolitan Council.

More information about these plans and planning processes is available in the Transportation Planning and Programming Guide for the Twin Cities Metropolitan Area. Figure 2 summarizes the process used to develop the TIP for the region.

As illustrated in Figure 3, projects are selected for inclusion in the TIP in several ways: selection by Congress of federal High Priority Projects, the TAB Regional Solicitation, MnDOT Metro District selection, and the Council selection for regional transit providers, including projects in the federal New Starts program as selected by Congress. These selection processes are discussed in Chapter 3. While most projects are programmed by MnDOT, the TAB Regional Solicitation projects are programmed, roughly every-other year, by the Council.

The funding percentages in Figure 3 represent the approximate share of total funds of all projects in the TIP (federal, state, and local), but it should be emphasized that the funding percentages in Figure 3 are not reflective of the total funding package for transportation. The TIP includes MnDOT's entire program within the MPO area, including projects that do not have any federal funding participation. The TIP does not include locally-funded transportation projects for the Metropolitan Council, Metro Transit, Metropolitan Transportation Services, suburban transit providers, counties, and cities. It also does not include the significant amounts of funding required for planning, design, engineering, and right-of-way acquisition that local governments typically pay for projects receiving federal construction funding.

The TPP and the Air Quality Control Plan provide a framework for the development of specific projects by MnDOT, the Metropolitan Council, and county and local governmental units and agencies that are responsible for planning, constructing and operating transportation facilities and services. All projects listed in this TIP must be consistent with the TPP and the transportation Air Quality Control Plan. Many of the highway construction projects included in this TIP are under MnDOT jurisdiction. They originate from ongoing MnDOT planning and programming activities and respond to the region's transportation plan. The projects that lead to the completion of the metropolitan highway system, along with the projects on other major arterials, are based on the region's TPP and on MnDOT's Highway Safety Improvement Program (HSIP) and programming process. The Metropolitan Council identifies transit service needs and objectives, planned transit service and capital improvements, and the costs and funding sources that help implement the TPP.

The TPP is further refined through more detailed studies, including corridor studies and alternatives studies. These studies, including the needed environmental reviews, lead to specific project recommendations that are included in implementation programs. Other projects, such as those concerned with resurfacing, bridge improvements and safety, arise from continuous monitoring and evaluation of existing highway facilities through MnDOT's pavement and bridge management plans.

City and county federal aid projects are products of local comprehensive and transportation planning programs and reflect local and regional priorities. These projects are determined to be consistent with regional plans before being included in the TIP. Such plans must also be consistent with the TRP.

* The TAB's action is returned for revision only if the Council finds the TIP inconsistent with Council policy.

Figure 2: Transportation Improvement Program (TIP) Development and Approval Process

Percentage of funding identified in the TIP by selection process for all projects (federal and state), 20192022. Top number represents share of total TIP; the bottom number represents share of federal funding included in the TIP.

* This TIP includes all projects selected by MnDOT, including those without federal funding. Projects selected by the MnDOT Office of Transit are usually incorporated into the TIP by amendment during the year. Most projects are selected by Metro District, but Sherburne County and Wright County projects are selected by MnDOT District 3. * Metro Transit numbers include projects funded with federal New Starts funding.

Figure 3: Project Selection Processes for Inclusion in the Twin Cities Transportation Improvement Program

## Estimating Project Costs

Projects beyond the first program year of the TIP will most likely be subject to inflation. Projects in the TIP are estimated in recognition of this reality in attempt to determine the cost in terms of year of expenditure. Each programming agency has its own approach to estimating inflated project costs. These approaches are:

- Metro Transit: Inflation is built into project amounts during the process of creating the six-year Capital Improvement Program for Transit divisions at the Council.
- MnDOT: Each year, a revised inflation adjustment table is used to update construction estimates and produce an inflated estimate for each project.
- Metropolitan Council-programmed Regional Solicitation projects and MnDOTProgrammed HSIP projects: Projects to be administered by FHWA recently awarded via the 2018 Regional Solicitation were adjusted at two percent per obligation year, with 2018 as the base, from their original cost estimate submitted in their funding application. The adjustments are entirely reflected in the local contribution, as the federal contribution is set at the time of award. The two percent per year adjustment derives from the Federal Reserve present target for inflation. Following this initial placement in the TIP, MnDOT monitors project costs, respectively, and adjust them as discussed in the above bullet. For FTA-administered projects, inflation is an assumption in the yearly Metropolitan Council Transit CIP.

## Amending or Modifying the TIP

Over the course of the year it sometimes becomes necessary to amend the TIP. Reasons include the addition of a new project, a significant change of scope that alters a project's description, and significant cost changes.

A change to the TIP can go through one of four processes, depending on the nature of the project and the degree to which the project is proposed to change. These changes include the following:

- Administrative Modification. An administrative modification requires no board action and is reserved for minor changes, including change of program years, minor cost changes, funding source changes, technical corrections, and splitting a project into multiple projects.
- Formal TIP Amendment. A formal TIP amendment is a more substantive change such as the addition of a federally funded project, a change to the type of work on a project, a significant cost change, and a change in project termini. Formal TIP amendments must be approved by TAB and concurred with by the Metropolitan Council. Formal TIP amendments follow one of three processes:
o Standard TIP Amendment. Standard TIP amendments are provided to the Funding \& Programming Committee and TAC for a technical recommendation before going to TAB for approval. Once a TIP amendment is approved by TAB, the Transportation Committee provides a recommendation to the Metropolitan Council on whether to concur with the approval. The Council then determines whether or not to approve the amendment.
o TIP Amendment to a Regionally Significant Project. A project is considered regionally significant if it adds one or more travel lanes for over one mile, involves the addition of an interchange, or involves the reconfiguration of an interchange for which a movement is added or eliminated. TIP amendments involving regionally significant projects follow the standard amendment process with the
addition of a 21-day public comment period. TAB releases the amendment for public comment. After the 21-day period is over, the amendment goes back to TAB for approval.
o Streamlined TIP Amendment. The streamlined amendment process was established in 2014 to expedite routine amendments. Streamlined amendments require approval from the TAC Executive Committee at which point they bypass the Funding \& Programming Committee and TAC. In order to be eligible for the streamlined process, a proposed amendment must not potentially change the air quality impact of a regionally significant project, impact a project related to a scope change through TAB, or be related to solicitation scoring based on cost effectiveness.

The Metropolitan Council follows FHWA and FTA's guidance in determining whether a proposed change requires a formal amendment to the State TIP (STIP). That guidance can be found on MnDOT's website. Streamlined TIP amendment guidance can be found in Appendix C.

Cost change thresholds are shown in Table 1.
Table 1: TIP Amendment and Modification Cost Change Thresholds*

| STIP Total Project Estimated Cost | Modification | Amendment |
| :--- | :---: | :---: |
| $<\$ 1,000,000$ | No modification required** |  |
| $\$ 1,000,001$ to $\$ 3,000,000$ | $20 \%$ | $50 \%$ |
| $\$ 3,000,001$ to $\$ 10,000,000$ | $20 \%$ | $35 \%$ |
| $\$ 10,000,001$ to $\$ 50,000,000$ | $10 \%$ | $20 \%$ |
| $\$ 50,000,001$ to $\$ 100,000,000$ | $10 \%$ | $15 \%$ |
| $>\$ 100,000,000$ | $* * *$ | $10 \%$ |

*FHWA projects. FTA projects use a 20\% threshold for an amendment. No threshold exists for a modification.
**Required when total project cost estimate is less than \$1 million AND the proposed total estimate cost remains less than $\$ 1$ million.
***Processing an Administrative modification for high profile projects (greater than $\$ 100$ million), when the change impacts financial constraint, requires prior collaborative discussion with FHWA.

Federal Legislation Changes
The Fixing America's Surface Transportation Act (FAST) Act was signed into law on December 4, 2016, as a five-year surface transportation authorization. Funding for specific programs is shown in Tables 8, 10, and 11.

In the spring of 2012, the U.S. Census Bureau released the updated 2010 urbanized area (UZA) boundaries for metropolitan areas across the country. This data included portions of Wright and Sherburne counties in Minnesota and Houlton in St. Croix County, Wisconsin in the Minneapolis-St. Paul urbanized area. As the metropolitan planning organization for the Twin Cities, the Metropolitan Council is required by federal law to become involved in the transportation planning efforts of these areas. Therefore, the TIP includes projects in Houlton, Wisconsin, along with the contiguous urbanized areas of Wright and Sherburne counties.

Federal Program Areas in the Transportation Improvement Program
Highway and transit funding programs are described below. MAP-21 and FAST Act consolidated federal funding programs and changed eligible activities in some programs.

Surface Transportation Block Grant (STBG) Program. The FAST Act consolidated the following two programs into the STBG Program, a block-grant type program that may be used for any roads (including those along the National Highway System, or NHS) that are not functionally classified as local or rural minor collectors, along with pedestrian projects, recreational trails, and Safe Routes to School projects. Bridge projects paid for with STBG Program funds may be on any public road. Transit capital projects are also eligible under this program. The 2020-2023 TIP still breaks these projects out into the former programs shown below:

- Surface Transportation Program (STP). This program was the most flexible program, as road, bicycle, pedestrian, and transit projects were all eligible to receive STP funding. Most STP-funded projects, however, were road projects.
- Transportation Alternatives Program (TAP). Under MAP-21, this program replaced the funding from programs including Transportation Enhancements, Recreational Trails, Safe Routes to School, and other discretionary programs.

Congestion Mitigation and Air Quality Improvement Program (CMAQ). CMAQ directs funds toward transportation projects in non-attainment and maintenance areas for ozone, carbon monoxide (CO), and particulate matter. These projects contribute to meeting or maintaining the attainment of national ambient air quality standards. Historically in the Twin Cities region, CMAQ funds have been used for travel demand management, transit service expansion, or highway system management projects (such as traffic signal coordination).

Highway Safety Improvement Program (HSIP). This program is designed to achieve a significant reduction in traffic fatalities and serious injuries on all public roads, including non-state-owned public roads and roads on tribal lands. The HSIP requires a data-driven, strategic approach to improving highway safety on all public roads that focuses on performance. RailwayHighway Grade Crossing Safety funds are part of this program and focus on improving safety at these crossings.

National Highway Performance Program (NHPP). The National Highway System (NHS) consists of 161,000 miles of major roads in the United States and 5,356 miles in Minnesota. Included are all Interstate highways and a large percentage of urban and rural principal arterials, the defense strategic highway network, and strategic highway connectors. All NHS routes in the region are eligible to use NHPP funds. NHPP provides support for the condition and performance of the NHS, for the construction of new facilities on the NHS, and to ensure that investments of Federal-aid funds in highway construction are directed to support progress toward the achievement of performance targets established in a state's asset management plan for the NHS.

National Highway Freight Program (NHFP). The FAST Act established the National Highway Freight Network. The NHFP funds projects that contribute to the efficient movement of freight on that designated network.

Transit Section 5307 Urbanized Area Formula Grants. This program provides assistance with transit capital and operating costs, including job access and reverse commute activities. This now includes job access and reverse commute activities formerly funded under Section 5316, which was rescinded in MAP-21.

Transit Section 5309 Fixed Guideway Capital Investment Grants ("New Starts"). This program funds major new and expanded rail and bus rapid transit system projects.

Transit Section 5310 Mobility of Seniors and Individuals with Disabilities Program. This program funds the purchase of lift-equipped vehicles by nonprofit organizations that provide transportation for seniors and individuals with disabilities. This can include projects specifically designed to meet the needs of seniors and individuals with disabilities, transit projects that exceed ADA standards, and transit projects that improve access to fixed-route transit and decrease reliance on paratransit.

Transit Section 5311 Program. This program is available for planning, operating, and capital assistance to areas with populations below 50,000 in rural areas.

Transit Section 5337 State of Good Repair Program. This program is designed to maintain public transportation systems in a state of good repair, focusing on fixed guideway and highintensity bus systems.

Transit Section 5339 Bus and Bus Facilities Program. This program provides funds for capital projects to replace, rehabilitate, and purchase buses and bus-related equipment and construct bus-related facilities.

## 2. REGIONAL PLAN AND PRIORITIES

All projects in the TIP are reviewed for consistency with the Transportation Policy Plan (TPP) and the Air Quality Control Plan. The Metropolitan Council adopted the TPP on October 24, 2018 (with amendments on $2 / 2719$ and 4/24/19 still pending USDOT approval), with FHWA/FTA conformity determination established on December 13, 2018. The Plan is in balance with anticipated revenues over the 20-year planning period. The Council carried out an extensive public participation process and held a public hearing on the TPP prior to adoption.

## Conformity to the Clean Air Act Requirements

The Clean Air Act (CAA) Amendment requires a State Implementation Plan (SIP) for air quality for all areas that have not attained the National Ambient Air Quality Standards (NAAQS). The SIP is a planning document prepared by the MPCA and submitted to the U.S. Environmental Protection Agency (EPA) for approval. The SIP contains the programs and plans that will result in achievement of the NAAQS. The SIP serves as the state's legally binding commitment to actions that will reduce or eliminate air quality problems. At the time of passage of the CAA, the Twin Cities Area was designated as a nonattainment area for NAAQS CO standards. All federally approved or financially funded functions must conform to the SIP and be consistent with the TPP. MPOs can only legally approve projects, plans, or programs that conform to the SIP.

## Conformity Determination Based on the U.S. Environmental Protection Agency Final Rule

The Clean Air Act Amendments of 1990 require transportation conformity in nonattainment and maintenance areas. Conformity is the process that links transportation to the SIP to reduce emissions and keep the area in compliance with air quality standards. Conformity determinations are required on long-range transportation plans, TIPs, and federally funded or federally approved transportation projects. In Minnesota, the Twin Cities is a maintenance area for carbon monoxide (CO). The term "maintenance area" means EPA previously cited the area for not meeting CO standards but now legally recognizes the area as meeting (attaining) these standards. Maintenance areas must continue to demonstrate that they will meet the standards. EPA designated the Twin Cities to maintenance status on October 29, 1999. On November 8, 2010, in response to a MPCA request, the EPA approved a Limited Maintenance Plan ${ }^{2}$ for the former non-attainment area. The conformity rules lay out technical and procedural requirements of conformity and require states to develop their own conformity procedures as part of their SIPs. The Twin Cities area is expected to become an attainment area in the fall of 2019.

As described in the rule, the MPO must make a conformity determination on transportation plans and programs for maintenance areas, including federally funded or approved projects, as well as non-federal projects that are regionally significant. The MPO prepared the 2020-2023 TIP following the requirements of the conformity rule. A consultation process was followed, involving the MPCA, MnDOT, U.S. DOT, U.S. EPA and the Council, as described in the provision of the interagency consultation process and in Appendix B.
${ }^{2}$ A limited maintenance plan enables a nonattainment area to be re-designated to attainment with a streamlined maintenance plan if they meet criteria. See more information on limited maintenance plans on FHWA's Air Quality Transportation Conformity page.

## Projects Included in TIP Conformity Analysis

The TIP conformity analysis involves review of all federally funded or approved highway and transit projects, all state trunk highway projects, and all projects that meet the definition of regionally significant (see Appendix B) in the Twin Cities maintenance area. Certain project types will not have regional or local emissions impacts. The TIP project tables annotate these projects "exempt" from regional emission analysis with a code under the column "AQ," corresponding to the appropriate category listed in Appendix B. Certain types of exempt projects may require a hotspot analysis. ${ }^{3}$ In addition, regionally significant projects programmed in the portion of Wright County within the maintenance area are also included as appropriate in the analysis as documented in Appendix B.

## Conformity of the TIP

The Metropolitan Council and TAB have determined that the TIP conforms to the broad intentions of the Clean Air Act (CAA) Amendment and to the specific requirements of the final transportation conformity rules (EPA's 40 CFR parts 51 and 93). The TIP emissions analysis, using the latest available planning assumptions and other supporting documentation, shows that the TIP will not result in violations of National Ambient Air Quality Standards for carbon monoxide. The TIP is fiscally constrained and comes from the conforming metropolitan transportation plan. Interagency consultation and public participation processes specified in the EPA rule and in the TPP were followed in the development of the TIP and the conformity analysis. A detailed description of the conformity analysis is found in Appendix B.

## Thrive MSP 2040

The TIP is consistent with the 2040 TPP, which is a system plan under the umbrella of Thrive MSP 2040, adopted by the Metropolitan Council on May 28, 2014. Thrive MSP 2040 is the vision for the Twin Cities metropolitan area over the next 30 years. It reflects concerns and aspirations, anticipates future needs in the region, and addresses responsibility to future generations. The region's investments provide an important economic foundation, so all residents can prosper.

Thrive MSP 2040 works towards five outcomes: stewardship, prosperity, equity, livability, and sustainability. It is also guided by three principles for how the Council should implement its policies: integration, collaboration, and accountability.

[^1]
## 3. FEDERAL PERFORMANCE MEASURES AND TARGETS

Pursuant to Title 23, Section 450.326(d) of the Code of Federal Regulations (CFR), the Metropolitan Council is required to incorporate a performance-based planning approach when developing the TIP. This includes an analysis of the anticipated effect the TIP may have towards achieving the performance targets adopted for the metropolitan area. Specifically, the regulation states: The TIP shall include, to the maximum extent practicable, a description of the anticipated effect of the TIP toward achieving the performance targets identified in the metropolitan transportation plan, linking investment priorities to those performance targets.
This approach was first established in 2012 with the federal Moving Ahead for Progress in the 21st Century Act (MAP-21), which established performance-based planning and identified the federal performance measures for highway safety, pavement, bridge, reliability, freight, CMAQ, and transit asset management and safety. The requirements continue through the federal Fixing America's Surface Transportation (FAST) Act, signed into law in 2015. The following are the four broad performance measure categories that must be included in the TIP:

- Highway Safety Performance Measure (PM1)
- Pavement and Bridge Performance Measure (PM2)
- System Performance Measures and CMAQ (PM3)
- Transit Asset Management (TAM)

## Highway Safety Performance Measure (PM1)

## Council Activities and Progress

The Transportation Policy Plan (TPP), which serves as the Metropolitan Transportation Plan (MTP) for the Council, includes an overarching goal related to highway safety-the Safety and Security Goal, as well as objectives and strategies (actions) the Council will employ to ensure that the desired safety outcomes are met. In addition, the five federally required safety performance measures and targets are included in the TPP in the Performance Outcomes chapter..

The region has implemented a number of proactive and reactive strategies to improve the safety for users of all modes within the metro area. These include a commitment to aggressively reduce the number of crashes involving fatalities and serious injuries annually, with the ultimate aspirational goal of achieving zero fatal and serious injury crashes. Pursuant to federal requirements, the Council must annually adopt highway safety performance targets that are reasonable and achievable. The Council thus adopted targets that reflect an annual reduction from the base-year data for fatalities and serious injury crashes. The Council will continue to annually target a reduction in fatal and serious injury crashes and prioritize the safety of the travelling public over all other goals.

Table 2 shows the adopted targets for 2019.

Table 2: Existing Conditions and Adopted Highway Safety Targets for 2019

| Measure | Existing Condition | 2019 Target |
| :--- | :---: | :---: |
| Total Traffic Fatalities | $98(2015)$ | 108 |
| Fatality Rate (per 100 million VMT) | 0.35 | 0.34 |
| Serious Injury Crashes | $749(2016)$ | 748 |
| Serious Injury Crash Rate (per 100 million VMT) | 2.67 | 2.37 |
| Non-motorized fatalities/serious injury crashes | 131 | 190 |

In addition to the TPP, the Council and its regional partners have completed several studies that directly address safety issues and propose strategies to improve safety in the metro area. These studies and plans include the Minnesota Strategic Highway Safety Plan; the Congestion Management and Safety Plan IV; the Principal Arterial Intersection Conversion Study; and applicable modal and county-produced safety plans.

Efforts like Towards Zero Deaths and Vision Zero promote the long-term goal of eliminating fatalities and serious injuries on the transportation network. The Council supports these goals and will consistently work towards reducing fatalities and serious injuries. This long-term goal, however, will be achieved incrementally and these performance targets set an achievable increment in the near term.

## Anticipated Effect of the Safety Performance Measures

Due to the fact that the metro area's fatal and serious injury crash rates are significantly lower than those of the state as a whole, the Council developed and adopted 2019 targets specific to the metro area. These targets were developed using the same methodology that MnDOT employed to establish the statewide targets but adapted to account for safety performance in the metro area. While transportation safety figures are more positive in the metro area than in Greater Minnesota, the region is committed to further improving transportation safety. This is reflected in the importance of safety-related scoring criteria included in the Regional Solicitation and in MnDOT's project selection, and in the projects that are ultimately programmed into the TIP.

The 2020-2023 TIP is anticipated to have a positive effect towards meeting the region's established safety performance targets. The TIP reflects $\$ 60$ million in FHWA Highway Safety Improvement Program (HSIP) funds, in addition to local match funding of $\$ 9.1$ million. These projects address both existing high-incident locations (reactive projects) and the design of newer projects (proactive projects) that pre-emptively address safety in their design. Further, safety is a key scoring criterion for the roadway expansion, roadway reconstruction/modernization, roadway system management, multiuse trails and bicycle facilities, pedestrian facilities, and safe routes to school funding categories in the biennial Regional Solicitation. In addition to federal funding sources, the region has used a number of other revenue sources to improve transportation safety in the metro area. Examples include a number of county- and city-funded safety projects as well as MnDOT's CMSP funding set aside each year.

While the 2019 safety targets reflect an improvement over historical performance, they should nonetheless be attainable. Some individual years might have a spike in fatal and serious injury crashes, but the overall long-term trend has been a decrease in serious-injury and fatal crashes. Serious-injury crash numbers are somewhat prone to human error, as the emergency vehicle operator has to manually enter information on the crash. This may potentially lead to
unexpected results but is less likely to be a problem in the metro area than in rural areas of Minnesota.

## MPO Investment Priorities

The Council has adopted a number of objectives and strategies intended to improve transportation safety and meet the 2019 safety targets. As outlined in the Transportation Policy Plan, these include the following objectives:

- Reduce fatal and serious injury crashes and improve safety and security for all modes of passenger travel and freight transport.
- Reduce the transportation system's vulnerability to natural and man-made incidents and threats.

Specific strategies the Council and its partners will use and implement to meet these objectives are as follows:

- Regional transportation partners will incorporate safety and security considerations for all modes and users throughout the processes of planning, funding, construction, and operation.
- Regional transportation partners will work with local, state, and federal public safety officials, including emergency responders, to protect and strengthen the role of the regional transportation system in providing security and effective emergency response to serious incidents and threats.
- Regional transportation partners will monitor and routinely analyze safety and security data by mode, severity, and location to identify priorities and progress.
- Regional transportation partners will support the state's vision of moving toward zero traffic fatalities and serious injuries, which includes supporting education and enforcement programs to increase awareness of regional safety issues, shared responsibility, and safe behavior
- The Council and regional transit providers will provide transit police services and coordinate with public safety agencies to provide a collaborative approach to safety and security.
- Regional transportation partners will use best practices to provide and improve facilities for safe walking and bicycling, since pedestrians and bicyclists are the most vulnerable users of the transportation system.
- Airport sponsors and air service providers will provide facilities that are safe, secure and technologically current.

While it is too early to assess whether the strategies are having the intended effect, the Council and its partners will closely monitor safety performance and re-prioritize should it be necessary.

## Pavement/Bridge Performance Measures (PM2)

## Council Activities and Progress

The Council adopted the 2020 and 2022 PM2 target for the first time over the course of 2018. Given the close coordination with MnDOT and similar performance for both the metro area and greater Minnesota, the Council chose to concur with the adopted MnDOT pavement/bridge performance measure targets. Table 3 depicts the existing metro area performance as well as the adopted statewide and regional targets for both 2020 and 2022.

Table 3: Existing Conditions and Adopted Condition Targets for 2020 and 2022

| Measure | Existing <br> Performance | 2020 <br> Target | 2022 <br> Target |
| :---: | :---: | :---: | :---: |
| Bridges |  |  |  |
| 1. \% of bridges by deck area in good condition | $46.3 \%$ | $>50 \%$ | $>50 \%$ |
| 2. \% of bridges by deck area in poor condition | $1.3 \%$ | $<4 \%$ | $<4 \%$ |
| Pavement |  |  |  |
| 1. \% of interstate pavement in good condition | $62.7 \%$ | $*$ | $>55 \%$ |
| 2. \% of interstate pavement in poor condition |  |  |  |
| 3. \% of non-interstate NHS pavement in good | $0.8 \%$ | $50.7 \%$ | $>50 \%$ |

*No target set for this measure/year

## Anticipated Effect of the Pavement/Bridge Performance Measures

The 2019-2022 TIP is anticipated to have a positive effect on the pavement and bridge performance measures, as there are projects programmed specifically for the purpose of improving bridge and pavement conditions. While interstate pavement condition within the metro area is performing at a level greater than the targets, non-interstate NHS pavement is not performing at the same level. This may indicate a need to focus more explicitly on non-interstate NHS facilities in the future in an effort to ensure the region continues to be on track to meet the 2020 and 2022 targets.

Currently, the metro area is not meeting the adopted target for the percent of bridges by deck area in good condition. This is offset, however, by the performance of the state a whole, which is on track to meet the established targets. Moving forward, the Council will continue to monitor bridge deck condition and explore mechanisms to ensure the future targets are met.

## System Performance Measures and Congestion CMAQ (PM3)

## Council Activities and Progress

The Council adopted both the initial system reliability (shown on Table 4) and congestion mitigation and air quality (CMAQ) (Table 5) targets for the region during the fall of 2018. All of the targets associated with these measures are specific to the metro area.

Because almost all congestion within the State of Minnesota occurs within the Metro Area, the Council adopted targets specific to the region that differed from the state-wide targets. The existing metro area performance for the percent of reliable person-miles traveled on the interstate system is approximately 69\%. MnDOT established a state-wide target of greater than $80 \%$, which would likely be unattainable for the near-term future within the metro area. Instead, the Council has adopted a 2020 and 2022 target of greater than 70\%. This target is appropriate in that it still aspires to be better than current conditions, but better fits the urban context than does the statewide target of $80 \%$.

In addition to the interstate person-miles target, the Council has also elected to adopt targets that are different than MnDOT's for the truck travel time reliability index measure. This is because truck travel reliability is less in the metro area than in Greater Minnesota as a whole.

The adopted MnDOT target truck travel time reliability of less than 1.5 would be very hard to attain given the increased traffic in the metro area as compared to greater Minnesota.

All of the adopted reliability targets aim for improvement over the existing conditions, and as such may be considered aspirational given recent trends. There is, however, no consequence to the Council for not meeting these targets, and the State of Minnesota as a whole is likely to meet their adopted targets. The Council has chosen these targets as a mechanism to aim for improvement in reliability in the immediate future and prioritize highway projects integrated within the TIP thusly.

Table 4: Existing Conditions and Adopted System Reliability Targets for 2020 and 2022

| Measure | Existing <br> Performance | $\mathbf{2 0 2 0}$ <br> Target | $\mathbf{2 0 2 2}$ <br> Target |
| :--- | :---: | :---: | :---: |
| \% of reliable person-miles traveled on the Interstate | $68.8 \%$ | $>70 \%$ | $>70 \%$ |
| \% of reliable person-miles traveled on the non- | $76.5 \%$ | $>75 \%$ | $>75 \%$ |
| Interstate NHS | 2.23 | $<2.20$ | $<2.20$ |
| Truck travel time reliability index |  |  |  |

Table 5: Existing Conditions and Adopted CMAQ Targets for 2020 and 2022

| Measure | Existing <br> Performance | 2020 <br> Target | $\mathbf{2 0 2 2}$ <br> Target |
| :--- | :---: | :---: | :---: |
| On-road mobile source emissions - sum of <br> emissions reductions of pollutants, in kilograms <br> per day, for all projects funded with CMAQ funds | 6,800 | $>6,800$ | $>6,800$ |
| \% of non-single occupancy vehicles | $23.2 \%$ | $>25 \%$ | $>25 \%$ |
| Peak hour excessive delay - annual hours of <br> delay per capita (delay is travel at less than 20 <br> MPH or 60\% of the posted speed | 8.65 | $<8.5$ | $<8.5$ |

## Anticipated Effect of the System Reliability and Congestion Reduction Performance Measures

 In total, there is over $\$ 117$ million in CMAQ projects programmed in the 2019-2022 TIP. The net benefit of these projects, as shown in Table 5, is a reduction of approximately $6,800 \mathrm{~kg} / \mathrm{day}$ of mobile source pollution. The CMAQ projects include the purchase of a number of transit vehicles; activities to market and incentive the use of carpools, vanpools, and ride matching programs; and projects aimed at retiming and optimizing traffic signal coordination.The 2020-2023 TIP also includes projects that are anticipated to have a positive effect on mobility and system reliability. This includes a number of spot mobility enhancements as well as large set-asides for future mobility projects.

## Transit Asset Management (TAM) Performance Targets

Transit asset management (TAM), a best practice and a requirement under federal law, is a business model that prioritizes funding decisions based on the condition of transit assets. Transit providers are required to assess, track, and report on their assets to FTA, and develop annual targets for asset management to ensure a state of good repair. Transit providers also develop transit asset management plans that document the implementation actions for asset management within their transit systems. TAM must be coordinated with the Council, which is
the region's MPO. The four FTA-required performance measures for transit asset management are:

- Rolling stock (buses and train used for serving customers): The percentage of revenue vehicles (by type) that exceed the useful life benchmark.
- Equipment (vehicles used in a support role): The percentage of non-revenue service vehicles (by type) that exceed the useful life benchmark.
- Facilities: The percentage of facilities (by group) that are rated less than 3.0 on the Transit Economic Requirements Model (TERM) Scale.
- Infrastructure: The percentage of rail track segments (by mode) that have performance restrictions. Track segments are measured to the nearest one-hundredth of a mile.
The region's transit operators officially established 2018 performance targets on April 1 of 2018. Table 6 summarizes the 2018 targets, which were adopted by the MPO in 2018.
Table 6: Adopted Transit Asset Management Targets for 2018

| Measure | 2018 Target |
| :--- | :---: |
| Rolling Stock: \% exceeding useful life | $8 \%$ |
| Articulated Bus | $0 \%$ |
| Over-the-Road Bus | $2.4 \%$ |
| Bus | $14 \%$ |
| Cutaway | $0 \%$ |
| Light Rail Vehicle | $0 \%$ |
| Commuter Rail Locomotive | $0 \%$ |
| $\quad$ Commuter Rail Passenger Coach | $42 \%$ |
| Equipment: \% exceeding useful life | $38 \%$ |
| $\quad$ Automobiles |  |
| Trucks/other Rubber Tire Vehicles | $0 \%$ |
| Facility: \% rated below 3 on condition scale | $0 \%$ |
| $\quad$ Passenger/Parking Facilities |  |
| $\quad$ Administrative/Maintenance Facilities | $1 \%$ |
| Infrastructure: \% of track with performance <br> restrictions <br> Light Rail |  |

## Transit Investment Priorities

The Council's Transportation Policy Plan (TPP) outlines the goals, objectives, and strategies that are used to set transit investment priorities for the region. These factors, in turn, directly guide the investment plan and transit projects programmed within the TIP. The TPP guides transit investments through the following objectives and strategies:

- Efficiently preserve and maintain the regional transit system in a state of good repair;
- Manage the regional transit network and respond to demand as deemed appropriate based on the Transit Market Area;
- Provide transit police services and coordinate with other public safety agencies to ensure the safety and security of the transit system;
- Promote alternatives to single occupant vehicles and ensure transit services reach major job and commercial activity centers;
- Expand and modernize transit service, facilities, systems, and technology to meet demand, improve customer experience, and increase transit access to destinations.

The Council's Fleet Management Procedures provide guidance for minimum vehicle life and inform the TAM performance targets established by the region's transit providers. This document outlines the conditions used to determine if the replacement of assets is necessary or can be deferred, including the point at which fleet vehicles are eligible for mid-life rehab procedures. The Fleet Management Procedures also set the principles used for determining the end vehicle's useful life, a preventative maintenance schedule, and the process for the purchase of new vehicles.

The primary pool of funds used to replace aging assets is FTA Sections 5337 and 5339, which are prioritized via the Regional Transit Capital Improvement Program (CIP), developed by Metro Transit and the suburban transit providers.

The Council supports the efforts to move towards a performance-based planning approach, and will continue to work closely with regional, state, and federal partners to proactively establish and monitor both the required federal and the regionally adopted performance measures over time. Moving forward, the Council will continue to devote substantial resources to this effort and work closely with stakeholders to assess the federal targets and the regional performance measures and adjust to changes in the performance of the system by shifting regional investment priorities.

## 4. PROJECT SELECTION PROCESSES AND CONSISTENCY WITH FINANCIAL RESOURCES AND ADOPTED TRANSPORTATION PLAN

This chapter discusses the sources (federal, state, regional, local) and amount of transportation funds available for projects and programs in the region; the processes used to select projects and programs for inclusion in the TIP; the balance between costs for selected projects and resources; and project consistency with the region's long-range transportation plan, the Transportation Policy Plan (TPP). A key element in the TIP fiscal constraint analysis is the balance between anticipated revenues and project costs.

Processes to Allocate Federal and State Transportation Funds
Several processes are used to allocate federal and state transportation funds to the Twin Cities Metropolitan Area. Projects have been selected for inclusion in the TIP by Congress (federal High Priority Projects and New Starts program), the TAB Regional Solicitation, MnDOT Metro District, and Council selection for regional transit providers.

Federal highway funding that goes to the TAB Regional Solicitation and to MnDOT Metro District is allocated by federal and state formulas. For federal and state highway funding, MnDOT uses a process to allocate the funds to the state's eight Area Transportation Partnership (ATP) regions, one of which covers the MnDOT Metro District. This process ensures the regional TIPs and the State Transportation Improvement Program (STIP) for highways meet the federal fiscal constraint requirement. The MnDOT fund allocation process has four steps:

1. The MnDOT Office of Transportation System Management (OTSM) identifies the amount of funds available to each ATP for the TIP period from the STBG Program, CMAQ, and HSIP programs. This funding amount is called the "funding target." The funding targets are sent to the ATPs for comment along with guidance for draft TIP preparation.
2. The ATPs, of which the MnDOT Metro District is one, develop their draft TIPs using its funding target.
3. OTSM reviews the draft TIPs, confirms the total highway funding amount programmed matches the total expected funding, and confirms fiscal constraint for the highway funding. All of the draft TIPs assembled together are called the draft State Transportation Improvement Program (STIP).
4. OTSM circulates the draft STIP to the ATPs. Each ATP may then modify and adopt their final TIP and submit it to MnDOT for inclusion into the final STIP.

Some transit funding is allocated by federal formula (Section 5307, Section 5310, Section 5311, Section 5337, and Section 5339), but funding for the federal New Starts program (Section 5309) is secured through national competition. Section 1 (Introduction) includes a list of each federal transit funding program and describes eligible projects. Section 5307, 5337, and 5339 funds are provided to the Council as the region's designated federal recipient and allocated among all regional providers. Section 5309 is discretionary New Starts and Small Starts funding appropriated by Congress to major transit capital projects. The New Starts funding is awarded to the Metropolitan Council after a major competitive process involving environmental review, preliminary engineering and design, and obtaining commitments of 50 percent of the total cost of the project by local cost-sharing partners. Section 5310 and Section 5311 funds are provided to the MnDOT Office of Transit as the State's designated agent.

Resources Available 2020-2023
All federally funded projects require a local match provided by the sponsoring agency. This local match can come from state trunk highway funds, state general funds, state bond funds, motor vehicle sales tax (MVST) funds, regional transit capital bond funds, city or county general funds, county transportation sales tax funds or from funding from other agencies. The local match funds add to the resources available to pay for projects in the TIP.

Transportation resources available to the region for highway, transit, and non-motorized projects are over $\$ 5$ billion over the 2020 to 2023 period (See Tables 9, 10, and 11). These funds include capital investments for highway, transit, and non-motorized modes and some operating funds for the metropolitan transit systems. Highway programs such as the Surface Transportation Block Grant (STBG) Program also provide funding for non-motorized investments listed as Bike/Ped projects in Appendix A, as well as bicycle and pedestrian elements of roadway projects. The approximate amounts programmed by mode are listed in Table 7. These numbers are approximate because many projects, particularly roadway projects, include investments designed for more than one mode and are listed with the primary mode served.

Table 7: Approximate Amount Programmed by Primary Mode Served*

|  | Approximate Amount <br> Programmed in 2020-2023 | Share of total TIP |
| :--- | :---: | :---: |
| Mode | $\$ 2.4$ billion | $45.2 \%$ |
| Highway/Roads | $\$ 121.5$ million | $2.3 \%$ |
| Bike/Ped Only | $\$ 2.57$ billion | $46.4 \%$ |
| Transit/TDM | $\$ 328.7$ million | $6.2 \%$ |
| Other/Set-asides | $\$ 5.33$ billion | $100 \%$ |
| Total |  |  |

*Many highway projects include significant bicycle and pedestrian elements such as trails, sidewalks, streetscape improvements and dedicated bike lanes and shoulders. The costs of these elements are not allocated to "Bike/Ped Only" in this table. Overall spending on bicycle and pedestrian infrastructure is higher than reflected in the "Bike/Ped Only" figure, which is the approximate sum of funds for projects dedicated solely for bicyclists and/or pedestrians. "Other/Set-asides" include all projects that do not directly serve a mode such as right-of-way purchase or environmental work.

## Highways and Roads

The traditional highway funding sources available to the region are summarized in Table 10. The four-year total is approximately $\$ 3.1$ billion. The four-year total includes $\$ 1.3$ billion of Federal Formula funds and $\$ 395$ million of Minnesota State Trunk Highway funds.

MnDOT also uses the advanced construction (AC) process to extend its available resources. MnDOT constructs federal aid projects in advance of the apportionment of authorized federal aid funds. MnDOT has to meet a number of conditions to use the AC process. MnDOT can commit future federal funds to projects as long as they go through the normal FHWA approval and authorization process. The projects using AC must be fully encumbered in the state budget for both the amount of state funds and the federal AC amount. The state funds available at contract letting must equal $100 \%$ of the local match of federal funds. This is normally 10 or 20 percent of the project costs. The AC amounts must be shown in the TIP (The detailed tables in Appendix A identify AC by project.). The AC must be shown in the year incurred and in each year the conversion takes place. Sufficient cash must exist to make project payments until AC is converted or the amount of work to be undertaken in a given construction season that does not exceed the actual federal funds available for that year. Within the TIP timeframe, $\$ 173$ million
will be used to advance construct projects in the region (Table 9). The AC funds that have been or will be used by the region by year are shown in Table 8.

Table 8: Advanced Construction Funds (Millions)

|  | Advance <br> Construction | Possible AC <br> Payback |
| :--- | :---: | :---: |
| 2019 |  |  |
| 2020 |  |  |
| 2021 | THIS TABLE WILL BE |  |
| 2022 | UPDATED IN THE FINAL TIP |  |
| 2023 |  |  |
| Post-2023 |  |  |
| Total |  |  |

Local funds are necessary to match the federal transportation funds. The majority of the projects on the trunk highway system are matched with trunk highway funds included in the targets and not in the local match figure. In all other cases, the federal funds are matched by city or county funds, regional transit capital or operating funds, or funds from other agencies such as the Minnesota Department of Natural Resources. At a minimum, these funds represent 20 percent of the project cost (aside from HSIP, which requires a 10 percent match), although this can be significantly higher. Local funding represents $\$ 492$ million over four years.

## Transit

Transit funds available to the region in 2020-2023 are summarized in Table 11. Included are federal transit funds and regional capital bonds used to match federal funds. This table does not show any highway funds allocated to transit. An estimated $\$ 1.3$ billion in federal transit funds will be received by the region in the next four years. Note that Section 5309 funding, which constitutes roughly $\$ 778$ million of that amount, has been requested, but has not yet been authorized by FTA.

The region generates transit capital and operating funds from four principal sources: fares, the state motor vehicle sales tax for operations, regional property taxes dedicated to repay bonds that fund capital projects, and state general funds that are directed to the region's ADA service, the regular transit service or to repay state bonds for transit projects. The suburban transit providers ${ }^{4}$ may also use local general fund money to subsidize operating cost or to match federal funds. Regional Capital Bonds and other local funds of $\$ 973$ million will be used to match federal transit funds (including Section 5309) and to locally fund various transit capital investments.

[^2]Table 9: Twin Cities Transportation Improvement Program; Four-Year Summary by Funding Source

| Federal Highway |  | \$1.3 Billion |
| :---: | :---: | :---: |
| Target | \$1.3B |  |
| High Priority Funds | \$0 |  |

Project Selection Processes and Criteria
The sources of federal transportation funds that come to the region are summarized below, along with the processes followed for project selection and the agency that is responsible for each selection process. These processes are described on the following pages.

Table 12: Summary of Federal Project Funding Categories and Selection Processes

| Funding Category | Project Selection Process Followed |
| :--- | :--- |
| Federal High Priority Projects | Selected and appropriated by Congress |
| Federal Highway Funding | - |
| National Highway Performance <br> Program (NHPP) | MnDOT Metro District Process with guidance <br> from Capital Improvement Committee (CIC) <br> (NHFP) Highway Freight Program |
| MnDOT Central Office Process |  |
| Surface Transportation Block Grant <br> (STBG) Program | Federal funding program that provides <br> transportation funding. The program <br> essentially combines the former Surface <br> Congestion Mitigation and Air Quality |
| Transportation Program (STP) and <br> Transportation Alternatives Program (TAP). <br> Some STPB Program funding is funding is <br> distributed through a competitive regional <br> Improvement (CMAQ) Program | solicitation process conducted by TAB while <br> other funding is distributed by MnDOT. |
| Federal funding program that funds projects <br> that will contribute air quality improvements or <br> provide congestion relief. Funding is |  |
| distributed through a competitive regional |  |
| solicitation process. |  |

Federal funding program aimed at reducing traffic fatalities and serious injuries. Some
Highway Safety Improvement Program (HSIP)

HSIP funding is distributed through a competitive regional solicitation process conducted by MnDOT and TAB while other HSIP funding is distributed by MnDOT.

|  | Selected and appropriated by Congress |
|  | MnDOT Office of Transit/Statewide <br> Competitive Process |
| Section 5311 | MnDOT Office of Transit/Categorical <br> Allocation <br> Section 5337 and 5339Regional Transit Capital Improvement <br> Program (CIP) developed by Metropolitan <br> Council |

Project Selection Process for Additional Federal Highway Funds by MnDOT Metro District with Assistance from the Capital Improvement Committee MnDOT Metro District, with guidance from its partners through the Capital Improvement Committee (CIC), identifies and selects projects on the state trunk highway system to be funded using National Highway Performance Program (NHPP) funds and included in the TIP. The CIC's membership includes representation from MnDOT Metro District, the Transportation Advisory Board, the Metropolitan Council, and six representatives of the TAB's Technical Advisory

Committee (TAC). The CIC provides guidance in developing investment strategies for MnDOT programs, prioritizing projects across program categories, and identifying major programming issues for consideration by MnDOT Metro District leadership (in the Metro District Program Committee) and the TAC Funding and Programming Committee. Investment decisions with statewide impacts may be elevated to the Transportation Program Investment Committee (TPIC) for consideration. TPIC membership includes the Metro District Engineer and other agency-wide leadership.

The Metropolitan Council and MnDOT have cooperatively identified priorities to be used in the selection of major projects to be included in the TIP. The priorities and projects are drawn from the TPP and the Minnesota State Highway Investment Plan (MnSHIP), 2018-2037. Investments and specific projects are identified consistent with priorities outlined in those plans, which over the next 10 years balance preservation of existing infrastructure with investments in safety, new connections for multiple modes, and some projects that advance economic development and quality of life objectives.

## Competitive Regional Project Selection Process

The Metropolitan Council and its Transportation Advisory Board (TAB) conduct a competitive process for the selection of local projects for federal highway funding and inclusion in the TIP. The Regional Solicitation was designed by the region's partners to help the region implement its plans and high priority projects and programs. The TAB's Regional Solicitation allocates approximately 18 percent of the federal funds that are available to the region. The Regional Solicitation process directs federal funds to a variety of locally-initiated projects that address transportation problems and help implement regional transportation and development policies. These locally-initiated projects from cities and counties reflect local and regional priorities and are products of local comprehensive and transportation planning programs. These local projects must be consistent with the region's long-range TPP. Projects using STBG, CMAQ, and HSIP funds are selected through the Regional Solicitation process. The priorities for project selection are based on the goals and policies in Thrive MSP 2040 and Transportation Policy Plan.

The 2018 Regional Solicitation selected projects for federal highway funding primarily in program years 2022 and 2023) in the following categories:

- Roadways Including Multimodal Elements
o Roadway Expansion
o Roadway Reconstruction. Modernization and Spot Mobility
o Traffic Management Technologies
o Bridges
- Bicycle and Pedestrian Facilities
o Multiuse Trails and Bicycle Facilities
o Pedestrian Facilities (Sidewalks, Streetscaping, and ADA)
o Safe Routes to School (Infrastructure Projects)
- Transit and Travel Demand Management
o Transit Expansion
o Transit Modernization
o Travel Demand Management (TDM-projects selected for 2020-2021)
- Highway Safety Improvement Program

HSIP projects are evaluated and awarded funds through a process administered by MnDOT, due to the specialized technical nature of the projects. TAB reviews and approves the criteria MnDOT develops for HSIP project evaluation along with the prioritized list of projects for funding.
Scoring committees, comprised of local partners, state agency staff, and Metropolitan Council staff evaluate and rank all categories of projects for the Regional Solicitation. Recommended projects are reviewed and approved by the Funding and Programming Committee, which, using the scoring committee rankings, recommends funding allocation options to be considered by TAC and recommended to TAB. TAB approves a list of projects and funding allocation developed through the Regional Solicitation process.
Qualifying and prioritizing criteria, used to evaluate each project, vary by mode and category. The evaluations produce a score and category ranking for each project, based on the project's anticipated performance for each prioritizing criterion. The qualifying and prioritizing criteria were developed consistent with, and for the purposes of, implementing regional transportation priorities and plans. Examples of qualifying criteria and prioritizing criteria are listed below.

## Examples of Qualifying Criteria

- The project must be consistent with the policies of Thrive MSP 2040 and the region's Transportation Policy Plan adopted by the Metropolitan Council.
- The project must implement a solution to a transportation problem discussed in a local or county comprehensive plan and/or in an approved Capital Improvement Program (CIP) of a local, regional, or state agency.
- The proposer must include with the project's application a letter from the agency with jurisdiction over the facility affected, indicating the agency is aware of and understands the project being submitted and that it commits to operate and maintain the facility for its design life.
- The proposer must show that the project has been coordinated with all affected communities, the appropriate transit operator, and other levels of government.

## Examples of Prioritizing Criteria

- Role in the regional transpiration system and economy
- Current or potential usage
- Demonstrated present and future need for facility
- Infrastructure age or condition
- Congestion reduction
- Integration of modes
- Collision reduction and safety
- Equity
- Likelihood of project coming to fruition (i.e., assessment of risk)
- Cost effectiveness
- Air quality

## Regional Solicitation Selected Projects

A summary of the federal funding allocated by category through the Regional Solicitation process is shown in Table 13. This table reports only the federal funds allocated to the projects and does not include the local match.

Table 13: Summary of Federal Funding Allocated through the TAB'S Regional Solicitation for Projects in State Fiscal Years 2020-2023 (Federal funds/in millions; Federal Amount only)

| Program Category | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ | $\mathbf{2 0 2 3}$ | Total |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Transportation Alternatives (TAP) | $\$ 18.0$ | 7.4 | 12.8 | 22.2 | 60.3 |
| Congestion Mitigation Air Quality (CMAQ) | $\$ 23.6$ | 18.4 | 31.1 | 23.6 | 83.6 |
| Surface Transportation Program (STP) | $\$ 66.2$ | 71.9 | 65.2 | 58.1 | 261.4 |
| Highway Safety Improvement Program (HSIP) | $\$ 8.5$ | 9.1 | 8.9 | 12.0 | 38.5 |
| TOTALS | $\mathbf{\$ 1 1 6 . 3}$ | $\mathbf{1 0 6 . 8}$ | $\mathbf{1 1 8 . 0}$ | $\mathbf{1 1 5 . 9}$ | $\mathbf{4 4 3 . 8}$ |

Figure 4: 2018 Regional Solicitation; Selected Projects (Excludes HSIP)

The following information is provided for each project receiving federal funds and listed
Transit Project Selection for Sections 5307, 5337, 5339, and 5309 New Starts/Major Capital Investment Funding
Federal transit funds come to the Metropolitan Council as the designated federal recipient for the region. The Council uses the federal funds for bus, light rail vehicle, and locomotive purchases; bus and rail vehicle rebuilding; shelters; garages; guideway improvements such as shoulder bus lanes, light rail track and systems; and maintenance and operations. These projects are identified in The Council's six-year Capital Improvement Program, which is a tool used to implement the regional transportation plan. The Council also submits projects for funding with federal transit funds and Regional Capital Bonds.

## Transit Project Selection for Sections 5310 and 5311 Funding

Federal Transit Administration (FTA) Section 5310 and 5311 funds are allocated by MnDOT's Office of Transit. Section 5310 funds are competitively allocated through a statewide process to non-profit agencies for vehicles. Projects are selected annually so each year the TIP is revised or amended and a new list of projects is included for the next fiscal year. Section 5311 allocates operating funds for small city transit service. There are three transit services in the region that receive funds.

## Balance of Selected Projects with Available Financial Resources

The FAST Act requires that the region's TIP must be consistent with funds reasonably expected to be available. This is called fiscal constraint and means the projects recorded in the TIP cannot significantly exceed expected revenues.

For federal and state highway funding, the state and region have agreed on a process that ensures a balance exists between federal highway funding resources and expenditures as discussed at the beginning of Chapter 3. The highway project program costs identified in Table 14 for 2020 to 2023 closely match the funds available as shown in Table 10, and the highway project program costs identified in Table 15 for State Fiscal Year 2020 closely match the funds available as shown Table 10. Anticipated highway revenues balance with expenditures and demonstrate fiscal constraint.

For federal, state, and regional transit funding, federal guidance requires transit funds match the approved project costs in the TIP. The projects funded with federal transit and local matching funds for 2020 have a total value of approximately $\$ 181$ million (Table 11).

## State Highways and Local Transportation Operations and Maintenance

MnDOT and metro area cities and counties are able to fund the maintenance and operations of the region's highway system over the course of the 2020-2023 TIP. The 2040 TPP forecasts $\$ 2$ billion in revenue for operating and maintaining state highway assets and $\$ 17$ billion for local roadways from 2015 to 2040. The TPP's increased revenue scenario shows an additional state highway need of $\$ 1$ billion for that time frame.

Table 14: Distribution of Federal Highway, State Trunk Highway and Matching Funds (in millions) 2020-2023

| Source | Total | Federal | State | Other <br> Bonds) | AC** |
| :--- | :---: | :---: | :---: | :---: | :---: |

| TOTAL | 855.5 | 346.9 | 111.9 | 396.7 | 100.8 |

**Advanced construction is shown in Tables 14 and 15 but the AC amounts are not included in the totals.

## Consistency with the Regional Transportation Plan and Priorities

All projects in the TIP must be consistent with the region's 2040 Transportation Policy Plan (TPP). The region's transportation goals are:

- Transportation System Stewardship: Sustainable investments in the transportation system are protected by strategically preserving, maintaining, and operating system assets.
- Safety and Security: The regional transportation system is safe and secure for all users.
- Access to Destinations: People and businesses prosper by using a reliable, affordable, and efficient multimodal transportation system that connects them to destinations throughout the region and beyond.
- Competitive Economy: The regional transportation system supports the economic competitiveness, vitality, and prosperity of the region and state.
- Healthy Environment: The regional transportation system advances equity and contributes to communities' livability and sustainability while protecting the natural, cultural, and developed environments.
- Leveraging Transportation Investments to Guide Land Use: The region leverages transportation investments to guide land use and development patterns that advance the regional vision of stewardship, prosperity, livability, equity, and sustainability.

The TPP contains lists of short- and long- range transportation projects programmed from 2015 through 2024. The projects identified in this TIP are either programmatically or specifically identified in the TPP adopted by the Metropolitan Council on October 24, 2018 (with amendments on 2/27/19 and 4/24/19 still pending USDOT approval), with FHWA/FTA conformity determination established on December 13, 2018. See the TPP on the Metropolitan Council's website.

## Plan Implementation Progress

## Status of Major Projects

Federal TIP guidance requires the progress made on implementing the region's transportation plan be reported annually. Tables 16 and 17 and Figure 5 identify the major highway and transit projects in the 2020-2023 TIP, cost, and status of each. During the past year, major projects completed included:

- Opening of the Metro Transit C Line - Arterial Bus Rapid Transit Project running from Downtown Minneapolis to Brooklyn Center, primarily along Penn Avenue.
- Minnesota Highway 149 (St Paul "High Bridge") over the Mississippi River - Resurface and reconstruction of the bridge deck, replacement of signals, and construction of a turn lane from westbound I-494 to Southbound Dodd Road.

All of the major projects are either specifically included in the region's Transportation Policy Plan or are consistent with the Plan's policies. The tables and maps in the Transportation Policy Plan also show major projects not yet programmed. In the coming years, these projects can be expected to move into the TIP as funds become available.

Figure 5: Major Projects Shown in Tables 16 and 17
The following information is provided for each project receiving federal funds and listed

Table 16: Status of Major Highway Projects

| Project | Cost Estimates | Program <br> Year-Last <br> TIP | Project Status/Comments |
| :---: | :---: | :---: | :---: |
| $\underline{\text { I-35W \& Lake Street }}$ | \$239,000,000 | 2018 | From 43 ${ }^{\text {rd }}$ St. to $11^{\text {th }}$ Ave., westbound I-94 from $1^{\text {st }}$ Ave. to Park Ave., and MN 65 from $24^{\text {th }}$ St. to $15^{\text {th }}$ St. in Minneapolis. MnPASS lane construction, pavement reconstruction, transit station, bridge, noise walls, retaining walls, and drainage. <br> Construction Start: August 2017 <br> Tentative Construction Completion: Fall 2021 |
| I-35W North MnPASS | \$200,000,000 | 2019 | Construct MnPASS lanes and long-term pavement preservation from County Road C in Roseville to Lexington Ave. (CSAH 17) in Blaine. Pavement preservation will continue north of Lexington Ave. to Sunset Ave. (CR 53). <br> Construction Start: 2019 <br> Construction Complete: 2021 |
| I-35W in Forest Lake | \$50,000,000 | 2019 | Concrete overlay, bridge replacement, and bridge rehabilitation. <br> Construction Start: July 2017 <br> Construction Complete: October, 2019 |
| I-35W Bridge over the Minnesota River | \$127,000,000 | $2020$ | Replacement of bridge and pavement and raising the road out of the floodplain between Cliff Road Interchange and $106^{\text {th }}$ St. <br> Construction Start: August 2018 <br> Construction Complete: November 2021 |
| US 169, MN 41, County 78 and County 14 | \$41,584,000 | 2018 | Interchange at US 169 MN 41/County Highway 78. Overpass over US 169 at County Highway 14. Frontage roads. <br> Construction Start: September 2018 <br> Construction Complete: 2020 |
| Re-thinking I-94 | \$200,000,000 | TBD | Development of project alternatives, evaluation of the I-94 corridor, development of short- and long-term recommendations. <br> Construction Start: 2024 |
| I-94 from MN 101 to I-494 | \$135,900,000 | 2020 | Concrete overlay, add eastbound and westbound lanes between MN 610 and MN 101, traffic management system, lighting <br> Construction Start: 2019 <br> Construction Complete: 2021 |

## Key to Tables

The tables are broken into the various "most likely" funding categories and are sorted by: Local/MnDOT, Agency, Trunk Highway, and State Project Number. The description of each column is shown below.

Yr The State Fiscal year the project is scheduled to be let.
PRT The major project this project is a part of - see attached list.
Route The highway the project is located on. A "999" means multiple routes or a location has yet to be determined.

Proj Num The TIP project number.
Prog MnDOT Program categories

AM: Municipal Agreement
B9: FTA Urbanized Area Formula - Section 5307
BR: Bridge Replacement
CA: Consultant Agreement
DR: Drainage
GR: State of Good Repair
NB: FTA Elderly \& Persons w/ Disabilities - Sec 5310
PL: Planning
RB: Rest Area/Beautification
RD: Reconditioning
RW: Right of Way Acquisition
RX: Road Repair (Bridge-Road Construction (BARC))
SR: Safety, Rail
SH: Highway Safety Improvement Program (HSIP)

B3: FTA Capital Program - Sec 5309
BI: Bridge Improvement and Repair
BT: Bike Trail
CF: Clean Fuels - Section 5308
EN: Enhancement
MC: Major Construction
NO: Noise Walls
PM: Preventive Maintenance
RC: Reconstruction
RS: Resurfacing
SC: Safety Improvements
TR: Transit
TM: Traffic Management

Description The location and work to be accomplished by the project.
Project Total Total estimated cost of project.
FHWA \$ or FTA \$ Federal funding for the project. In some instances, the federal funding is greater than the funding allocated by the STP selection process. This was necessary to entirely fund some larger projects.

DEMO \$ Total federal demonstration funding for the project.
AC \$ Funding to be reimbursed in a future program year.
State \$ MnDOT state funding for the project.
Other \$ Total contribution from the local agency involved in the project.
Agency The agency with jurisdiction over the project.
AQ TIP air quality category. See Appendix B for description of codes.

## MnDOT Metro District Construction Projects

2020-2023 Parent Projects
This table will be included in the Final TIP.

Twin Cities Metropolitan Area
2020-2023 Transportation Improvement Program
TABLE A-17
WISCONSIN

## Appendix B

## Conformity Documentation Of the 2020-2023 Transportation Improvement Program to the 1990 Clean Air Act Amendments

## Prepared May 3, 2019

## Air Quality Conformity

## Clean Air Act Conformity Determination

The Minneapolis-Saint Paul region is within an EPA-designated limited maintenance area for carbon monoxide. A map of this area, which for air quality conformity analysis purposes includes the seven-county Metropolitan Council jurisdiction plus Wright County and the City of New Prague, is shown on page B-9. The term "maintenance" reflects the fact that regional CO emissions were unacceptably high in the 1970s when the National Ambient Air Quality Standards (NAAQS) were introduced, but were subsequently brought under control. A second 10-year maintenance plan was approved by EPA on November 8, 2010, as a "limited maintenance plan." Every Transportation Policy Plan (TPP) or Transportation Improvement Program (TIP) approved by the Council must be analyzed using specific criteria and procedures defined in the Conformity Rule to verify that it does not result in emissions exceeding this current regional CO budget. A conforming TIP and TPP must be in place in order for any federally funded transportation program or project phase to receive FHWA or FTA approval.

The analysis described in the appendix has resulted in a Conformity Determination that the the 2020-2023 TIP meets all relevant regional emissions analysis and budget tests as described herein and conforms to the relevant sections of the Federal Conformity Rule and to the applicable sections of Minnesota State Implementation Plan for air quality.

## Public Involvement \& Interagency Consultation Process

The Council remains committed to a proactive public involvement process used in the development and adoption of the TIP as required by the Council's Transportation Public Participation Plan, adopted on July 26, 2017. An interagency consultation process was used to develop the TIP. Consultation continues throughout the public comment period to respond to comments and concerns raised by the public and agencies prior to final adoption by the Council. The Council, MPCA, and MnDOT confer on the application of the latest air quality emission models, the review and selection of projects exempted from a conformity air quality analysis, and regionally significant projects that must be included in the conformity analysis of the TIP. An interagency conformity work group provides a forum for interagency consultation on technical conformity issues, and has met in person and electronically over the course of the development of the TPP and TIP.

## Emissions Test

In 2010, the EPA approved a Limited Maintenance Plan for the maintenance area. A limited maintenance plan is available to former non-attainment areas which demonstrate that monitored concentrations of CO remain below $85 \%$ of the eight-hour NAAQS for eight consecutive quarters. MPCA CO monitoring data shows that eight-hour concentrations have been below 70\% of the NAAQS since 1998 and below 30\% of the NAAQS since 2004.

Under a limited maintenance plan, the EPA has determined that there is no requirement to project emissions over the maintenance period and that "an emissions budget may be treated as essentially not constraining for the length of the maintenance period because it is unreasonable to expect that such an area will experience so much growth in that period that a violation of the CO NAAQS would result." No regional modeling analysis is required; however, federally funded projects are still subject to "hot spot" analysis requirements.

The limited maintenance plan adopted in 2010 determines that the level of CO emissions and resulting ambient concentrations continue to demonstrate attainment of the CO NAAQS. The following additional programs will also have a beneficial impact on CO emissions and ambient concentrations: ongoing implementation of an oxygenated gasoline program as reflected in the modeling assumptions used in the State Implementation Plan; a regional commitment to continue capital investments to maintain and improve the operational efficiencies of highway and transit systems; adoption of Thrive MSP 2040, which supports land use patterns that efficiently connect housing, jobs, retail centers, and transit-oriented development along transit corridors; and the continued involvement of local government units in the regional 3C transportation planning process, which allows the region to address local congestion, effectively manage available capacities in the transportation system, and promote transit supportive land uses as part of a coordinated regional growth management strategy. For all of these reasons, the Twin Cities CO maintenance areas will continue to attain the CO standard for the next 10 years.

## Transportation Control Measures

Pursuant to the Conformity Rule, the Council reviewed the 2020-2023 TIP and certifies that it conforms to the State Improvement Plan and does not conflict with its implementation. All transportation system management strategies which were the adopted transportation control measures for the region have been implemented or are ongoing and funded. There are no TSM projects remaining to be completed. There are no fully adopted regulatory new TCMs nor fully funded non-regulatory TCMs that will be implemented during the programming period of the TIP. There are no prior TCMs that were adopted since November 15, 1990, nor any prior TCMs that have been amended since that date. A list of officially adopted transportation control measures for the region may be found in the Nov. 27, 1979, Federal Register notice for EPA approval of the Minneapolis-St. Paul Carbon Monoxide Maintenance Plan. Details on the status
of adopted Transportation Control Measures can be found in the 2040 Transportation Policy Plan, in Appendix E.

## Federal Requirements

The 2020-2023 TIP meets the following Conformity Rule requirements:
Inter-agency consultation: The Minnesota Pollution Control Agency (MPCA), Minnesota Department of Transportation (MnDOT), Environmental Protection Agency (EPA), and Federal Highway Administration (FHWA) were consulted during the preparation of the TIP and its conformity review and documentation. The "Transportation Conformity Procedures for Minnesota" handbook provides guidelines for agreed-upon roles and responsibilities and interagency consultation procedures in the conformity process.

Regionally significant and exempt projects: The analysis includes all known federal and nonfederal regionally significant projects. Exempt projects not included in the regional air quality analysis were identified by the inter-agency consultation group and classified.

Donut areas: No regionally significant projects are planned or programmed for the City of New Prague. Regionally significant projects were identified for Wright County to be built within the analyses period of the Plan and incorporated into the conformity analysis.

Latest planning assumptions: The published source of socioeconomic data for this region is Thrive MSP 2040. The latest update to these forecasts was published by the Metropolitan Council in April 2018.

Public Participation: The TIP was prepared in accordance with the Transportation Public Participation Plan, adopted by the Council on July 26, 2017. This process satisfies federal requirements for public involvement and public consultation.

Fiscal Constraint: The TIP addresses the fiscal constraint requirements of the Conformity Rule.
The Council certifies that the TIP does not conflict with the implementation of the State Implementation Plan, and conforms to the requirement to implement the Transportation System Management Strategies, which are the adopted Transportation Control Measures (TCMs) for the region. All of the adopted TCMs have been implemented.

Any TIP projects that are not specifically listed in the plan are consistent with the goals, objectives, and strategies of the plan and will not interfere with other projects specifically included in the plan.

There are no projects which have received NEPA approval and have not progressed within three years.

Although a small portion of the Twin Cities Metropolitan Area is a maintenance area for PM-10, the designation is due to non-transportation sources, and therefore is not analyzed herein.

## List of Regionally Significant Projects

Pursuant to the Conformity Rule, the projects listed in the TIP and Transportation Policy Plan (see Appendix C) were reviewed and categorized using the following determinations to identify projects that are exempt from a regional air quality analysis, as well as regionally significant projects to be included in the analysis. The classification process used to identify exempt and regionally significant projects was developed through an interagency consultation process involving the MPCA, EPA, FHWA, the Council and MnDOT. Regionally significant projects were selected according to the definition in Section 93.101 of the Conformity Rules:
"Regionally significant project means a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel."

Junction improvements and upgraded segments less than one mile in length are not normally coded into the Regional Travel Demand Forecast Model, and therefore are not considered to be regionally significant, although they are otherwise not exempt. The exempt air quality classification codes used in the "AQ" column of project tables of the Transportation Improvement Program are listed at the end of this appendix. Projects which are classified as exempt must meet the following requirements:

- The project does not interfere with the implementation of transportation control measures.
- The project is exempt if it falls within one of the categories listed in Section 93.126 in the Conformity Rule. Projects identified as exempt by their nature do not affect the outcome of the regional emissions analyses and add no substance to the analyses. These projects are determined to be within the four major categories described in the conformity rule.

The inter-agency consultation group, including representatives from MnDOT, FHWA, MPCA, EPA, and the Council, reviewed list of projects to be completed by 2040 including the following:

- Existing regionally significant highway or transit facilities, services, and activities;
- Regionally significant projects (regardless of funding sources) which are currently:
o under construction or undergoing right-of-way acquisition, or;
o come from the first year of a previously conforming Transportation Improvement Program, or;
o have completed the NEPA process, or;
o listed in the 2020-2023 Transportation Improvement Program, or;
o listed in the Transportation Policy Plan (Appendix C), or;
o identified for Wright County.
Each project was assigned to a horizon year (open by January of 2020, 2030 or 2040) and categorized in terms of potential regional significance and air quality analysis exemption as per Sections 93.126 and 93.127 of the Conformity Rule, using the codes listed in this appendix. The resulting list of regionally significant projects is shown below.

## Horizon Year 2020

## Strategic Capacity Enhancements

- I-494 - westbound lane from Concord Street through 7th Avenue
- Carver County 14 - new 2 lane divided highway from Carver County 43 to Carver County 11 in Victoria
- Wright County 39-2 to 4 lane expansion from Parish Avenue to Wright County 42 in Otsego
- US 169 at Scott County 14 - new interchange
- MN 97 at I-35 - expanding MN 97 through interchange area
- Washington County 13 - add southbound 3rd lane from 3rd Street to Hudson Road
- MN 41-4 to 3 lane conversion from Minnesota River to East 5th Street
- East Waconia Bypass - new 2-lane arterial from Carver County 10 to MN 5
- TH 5 from $94^{\text {th }}$ St to Birch St in Waconia: Widen to 4-lanes
- TH 62 from France Ave to Xerxes: Construct EB auxillary lane
- TH 55 from Plymouth Blvd to Vicksburg Ln in Plymouth, Construct WB auxillary lane.
- MN 41 between US 212 and CSAH 14: Reconstruction and expansion
- I-35W in Burnsville: Add Auxilliary lanes between Black Dog Rd and 106 ${ }^{\text {th }}$ Street
- I-494 in South St Paul and Inver Grove Heights: Add Auxillary lanes between Hardman Ave and Bovey Ave.
- I-35W from CR C in Roseville to Lexington Ave in Blaine: Construct MNPASS Lanel694 in Arden Hills: Construct 2 lane entrance ramp from US 10 to EB694
- US 10 from SB I-35W to CSAH 96 in Arden Hills: Construct two lane exit from I-35W, construct auxillary lane on US 10.
- US 169 from MN 41 to Scott County Road 69 in Jackson Twp: Construct Frontage road
- I-694 in Oakdale - auxiliary lane SB from 10th St to I-94
- MN 36 at Hadley Ave in Oakdale: Construct interchange
- US 169 at MN 41 in Jackson Twp: Construct interchange

## Transitway System

- METRO Orange Line
- Arterial BRT along Penn Ave in Brooklyn Center and Minneapolis

## Other Regionally Significant Transit Expansion

- Stillwater Park and Ride at TH 36

## 2011 Regional Solicitation Selected Projects

- St. Paul East 7 ${ }^{\text {th }}$ Street: Limited stop transit service demonstration
- 105th Ave: extension to 101st Ave W of I-94 in Maple Grove
- Lake Street and I-35W
- TH 149: from TH 55 to just N of I-494 in Eagan-reconstruct from 4-lane to 5-lane
- Anoka CSAH 11: from N of Egret Blvd to N of Northdale Blvd - reconstruction of CSAH 11 (Foley Blvd) as a 4-lane divided roadway
- Hennepin CSAH 34: from W 94th St to 8500 Block in Bloomington - reconstruction of CSAH 34 (Normandale Blvd) as a 4-lane divided roadway
- *Hennepin CSAH 53: from just W of Washburn Ave to 16th Ave in Richfieldreconstruct to a 3-lane section center turn lane, raised concrete median, signal replacement, sidewalks, on-road bikeways
- Hennepin CSAH 81: from $N$ of 63rd Ave N to N of CSAH 8 in Brooklyn Park reconstruct to a multi-lane divided roadway
- Hennepin CSAH 35: from 67th St to 77th St in Richfield-reconstruct including transit, bicycle, and pedestrian facilities
- Scott CSAH 17: from S of CSAH 78 to N of CSAH 42 - reconstruct as a 4-lane divided roadway
- Anoka CSAH 116 from east of Crane St through Jefferson St - reconstruct to 4-lane divided roadway

## 2014 Regional Solicitation Selected Projects

- Scott County: TH 169 and TH 41 interchange
- Eagan: Reconstruction of CSAH 31 from I-35E to Northwood/Central Parkway
- Washington County: TH 36/Hadley interchange
- Washington County: CSAH 13 expansion
- Hennepin County: CSAH 81 expansion
- Anoka County: CSAH 78 expansion from $139^{\text {th }}$ Ln to CSAH 18
- Carver County: TH 41 expansion
- St. Louis Park: Beltline Park and Ride
- Metro Transit: Route 62 service expansion
- MVTA: 169 connector service
- Metro Transit: Route 2 service expansion
- Metro Transit: Emerson-Fremont Ave corridor bus and technology improvements
- Metro Transit: Chicago Ave corridor bus and technology Improvements

## 2016 Regional Solicitation Selected Projects

- Louisville Township: US 169 and CSAH 14 interchange
- Dayton: Brockton lane interchange
- Roseville: Snelling Avenue expansion
- Washington County: MN 36 and Manning Avenue interchange
- Richfield: $77^{\text {th }}$ Street underpass of CSAH 77

## Projects Outside of Metropolitan Planning Area, Inside Maintenance Area

- I-94: from MN 25 to CSAH 18 - reconstruction including addition of auxiliary lanes
- CSAH 19 in Alberville: Extend Multilane Roadway from Lamplight Dr to N of $70^{\text {th }} \mathrm{St}$

## Horizon Year 2030

MnPASS Investments | Horizon Year 2030

- I-35W from MN 36 to US 10 - construct MnPASS lane
- I-35W from MN36 to Anoka CSAH 17 - construct MnPASS Iane
- I-94 from Cedar Avenue to Marion Street - construct MnPASS Iane
- I-494 - add a MnPASS lane along eastbound from France Avenue to MN 77 and westbound from MN 77 to I-35W
- I-35W - add a southbound MnPASS lane from MN 36 through University Avenue SE
- I-35W MnPASS Southbound from downtown Minneapolis to 46th St.
- MN 252 and I-94 from MN 610 to Dowling Ave - construct MnPASS lane

## Transitway System

- METRO Blue Line extension
- METRO Gold Line dedicated BRT
- Arterial BRT along Chicago Avenue and Emerson and Fremont avenues in Brooklyn Center, Minneapolis, Richfield, and Bloomington
- METRO Red Line Stage 2 improvements including extension of BRT service to 181st Street in Lakeville
- Riverview Modern Streetcar
- METRO Rush Line dedicated BRT
- Arterial BRT along Lake Street and Marshall Avenue
- METRO Green Line extension

## Other Regionally Significant Transit Expansion

- US 52, at MN 50 in hampton, in the NW quadrant- expand park and pool lot

## 2018 Regional Solicitation Selected Projects

- MN 252 at CSAH 109 in Brooklyn Park - grade separation, retaining walls
- CSAH 26 FROM TH 55 in Eagan to MN 3 in Inver Grove Heights - expand from 2lane to divided 4-lane roadway
- CSAH 51 from Shepard Road to West 7th St in St. Paul - Lexington Parkway extension
- CSAH 610 from CSAH 30 to MN 610 in Maple Grove - construct new four-lane divided highway (CSAH 610), new bridge over I-94
- CSAH 103 from 85th Ave to 93rd Ave in Brooklyn Park - reconstruct, 2-lane to 4lane conversion, turn lanes
- US 10/169 from Anoka/Ramsey city limits to Green Haven Rd/Main St interchangereconstruct, grade separate intersections at Fairoak Ave and Thurston Ave, improve frontage and supporting road configurations to Main St and Thurston Ave

## Projects Outside of Metropolitan Planning Area, Inside Maintenance Area

- Wright CSAH 19 from Lamplight Dr to N of 70th St in Albertville - extend multilane roadway
- Wright CSAH 19 from Chestnut Ave SE to Ash Ave NE in St. Michael - roadway expansion

## Strategic Capacity Enhancements

- US 169 - convert arterial to freeway from US 10 to 197th Avenue
- I-94 - expand from 4 to 6 lanes between TH 41 and Wright County 19 include interchange improvements at MN 241, Wright County 37 and Wright County 19
- I-35W - northbound lane from Cliff Road to north of Mississippi River
- I-494 - southbound lane from eastbound 1-94 to Tamarack Road in Woodbury
- MN 51 - lane add northbound from CR B2 through Lydia Street
- Carver County $10-2$ to 4 lane expansion from Clover Ridge Drive to Carver County 11 in Chaska
- Carver County 10 - 2 to 4 lane expansion from MN 41 to US 212
- Carver County $10-2$ to 4 lane expansion from Carver County 11 to Carvery County 43
- Carver County 11 - 2 to 4 lane expansion from 6th Street to US 212 in the City of Carver
- Carver County 18 - new 2-lane arterial from Bavaria Road to MN 41
- Dakota County $26-2$ to 4 lane expansion from MN 55 to MN 3
- Dakota County 70-2 to 4 lane expansion from east of I-35, east of Kenrick Avenue to Cedar Avenue/Dakota County 50
- Scott County 27 - 2 to 4 lane expansion from Scott County 21 to Scott County 44
- Scott County 42 - 2 to 4 lane expansion from Scott County 17 to Scott County 83
- US 212 at Carver County 44 - new ramps to and from the north at an existing overpass
- I-94, from MN 101 in rogers to I-494 in Maple Grove: add EB and WB lanes between MN 610 and MN 101
- I-494 from Eash Bush Lk Rd to MN 100 EB, France Ave to MN 77 EB and from MN 77 to I-35W both directions in Bloomigton - improve mobility, and on I-35W NB to WB I-494 complete Phase 1 turbine interchange, direction ramp
- US 169 at 101st Ave in Brooklyn Park - construct interchange
- MN 41 from S of Minnesota River bridge to Walnut St in Chaska - improve intersection at CSAH 61
- MN 252, at 66th Ave N in Brooklyn Center-construct interchange, convert to freeway, close intersection at 70th Ave
- CSAH 83 from US 169 north ramp to south of 4th Ave E in Shakopee-reconstruct to urban 4-lane divided roadway
- Reconstruct CSAH 21/TH 13 intersection in Prior Lake including on CSAH 21 from West Ave intersection to Franklin Trail E of MN 13 -reconstruct intersection with Main Ave to 3/4 intersection, roundabouts at TH 13 \& Arcadia Ave intersection, $3 / 4$ intersection at TH 13 \& Pleasant St
- MN 13 and Dakota Ave in Savage, from W of Dakota Ave to E of Yosemite- grade separated interchange at Dakota Ave, frontage roads and access ramps
- US 10, from W City of Anoka border to EB entrance ramp from W Main St. Includes new interchange with bridges at Thurston Ave, grade separation at Fairoak with bridge and supporting roadways on north and south side of US 10
- CSAH 70, from 0.36 mi E of I-35 to CSAH 23 in Lakeville- expand 2 to 4 lane
- I35W, from W 106th St to 0.1 Mi S of W 82nd St in Bloomington - construct auxiliary lanes
- MN252 from I-94 to MN 610 and on I-94 from Dowling Ave to MN 252 in Minneapolis, Brooklyn Center and Brooklyn Park - convert MN252 to a freeway and improve mobility in both directions from MN 610 to Dowling Ave
- US 212 from Carver (CSAH 11) to Cologne (CSAH 36)- expand 2 lane to 4 lane
- CSAH 14 from Lexington Ave NE (CSAH 17) to 0.23 mi E of Lever St in Blaine reconstruct from 2 to 4 lane

## Horizon Year 2040

- No projects identified

Figure E-1: Carbon Monoxide Maintenance Area

## Letter from MPCA

Insert Letter Here

Insert Letter Here

## Exempt Projects

Certain transportation projects eligible for funding under Title 23 U.S.C. have no impact on regional emissions. These are "exempt" projects that, because of their nature, will not affect the outcome of any regional emissions analyses and add no substance to those analyses. These projects (as listed in Section 93.126 of the Conformity Rules) are excluded from the regional emissions analyses required in order to determine conformity of the Transportation Policy Plan and the TIP.

The following is a list of "exempt" projects and their corresponding codes used in column "AQ" of the TIP. Except for projects given an "A" code, the categories listed under Air Quality should be viewed as advisory in nature, and relate to project specific requirements rather than to the air quality conformity requirements. Ultimate responsibility for determining the need for a hotspot analysis for a project rests with the U.S. Department of Transportation. The Council has provided the categorization as a guide to possible conformity requirements.

## Projects that Do Not Impact Regional Emissions

## Safety

- S-1: Railroad/highway crossing
- S-2: Hazard elimination program
- S-3: Safer non-federal-aid system roads
- S-4: Shoulder improvements
- S-5: Increasing sight distance
- S-6: Safety improvement program
- S-7: Traffic control devices and operating assistance other than signalization projects
- S-8: Railroad/highway crossing warning devices
- S-9: Guardrails, median barriers, crash cushions
- S-10: Pavement resurfacing and/or rehabilitation
- S-11: Pavement marking demonstration
- S-12: Emergency relief (23 U.S.C. 125)
- S-13: Fencing
- S-14: Skid treatments
- S-15: Safety roadside rest areas
- S-16: Adding medians
- S-17: Truck climbing lanes outside the urbanized area
- S-18: Lighting improvements
- S-19: Widening narrow pavements or reconstructing bridges (no additional travel lanes)
- S-20: Emergency truck pullovers

## Transit

- T-1: Operating assistance to transit agencies
- T-2: Purchase of support vehicles
- T-3: Rehabilitation of transit vehicles
- T-4: Purchase of office, shop, and operating equipment for existing facilities
- T-5: Purchase of operating equipment for vehicles (e.g., radios, fareboxes, lifts, etc.)
- T-6: Construction or renovation of power, signal and communications systems
- T-7: Construction of small passenger shelters and information kiosks
- T-8: Reconstruction or renovation of transit buildings and structures (e.g., rail or bus buildings, storage and maintenance facilities, stations, terminals and ancillary structures)
- T-9: Rehabilitation or reconstruction of track structures, track and trackbed in existing rights-of-way
- T-10: Purchase of new buses and rail cars to replace existing vehicles or for minor expansions of the fleet
- T-11: Construction of new bus or rail storage/maintenance facilities categorically excluded in 23 CFR 771

## Air Quality

- AQ-1: Continuation of ridesharing and vanpooling promotion activities at current levels
- AQ-2: Bicycle and pedestrian facilities

## Other

- O-1: Specific activities that do not involve or lead directly to construction, such as planning and technical studies, grants for training and research programs, planning activities conducted pursuant to titles 23 and 49 U.S.C., and Federal-aid systems revisions
- O-2: Engineering to assess social, economic and environmental effects of the proposed action or alternatives to that action
- O-3: Noise attenuation
- O-4: Advance land acquisitions (23 CFR 712 or 23 CRF 771)
- 0-5: Acquisition of scenic easements
- 0-6: Plantings, landscaping, etc.
- 0-7: Sign removal
- O-8: Directional and informational signs
- 0-9: Transportation enhancement activities (except rehabilitation and operation of historic transportation buildings, structures or facilities)
- 0-10: Repair of damage caused by natural disasters, civil unrest, or terrorist acts, except projects involving substantial functional, locational or capacity changes

## Projects Exempt from Regional Emissions Analyses that May Require Further Air Quality Analysis

The local effects of these projects with respect to carbon monoxide concentrations must be considered to determine if a "hot-spot" type of an analysis is required prior to making a projectlevel conformity determination. These projects may then proceed to the project development process even in the absence of a conforming transportation plan and Transportation Improvement Program. A particular action of the type listed below is not exempt from regional emissions analysis if the MPO in consultation with the MPCA, MnDOT, EPA, and FHWA (in the case of a highway project) or FTA (in the case of a transit project) concur that it has potential regional impacts for any reason.

Channelization projects include left and right turn lanes and continuous left turn lanes as well as those turn movements that are physically separated. Signalization projects include reconstruction of existing signals as well as installation of new signals. Signal preemption projects are exempt from hot-spot analysis. A final determination of the intersections that require an analysis by the project applicant rests with the U.S. DOT as part of its conformity determination for an individual project.

## Projects Exempt from Regional Emissions Analyses

- E-1: Intersection channelization projects
- E-2: Intersection signalization projects at individual intersections
- E-3: Interchange reconfiguration projects
- E-4: Changes in vertical and horizontal alignment
- E-5: Truck size and weight inspection stations
- E-6: Bus terminals and transfer points

## Non-Classifiable Projects

Certain unique projects cannot be classified, as denoted by "NC." These projects were evaluated through an interagency consultation process and determined not to fit into any exempt or intersection-level analysis category, but they are clearly not of a nature that would require inclusion in a regional air quality analysis.

## Traffic Signal Synchronization

Traffic signal synchronization projects (Sec. 83.128 of the Conformity Rules) may be approved, funded and implemented without satisfying the requirements of this subpart. However, all subsequent regional emissions analysis required by subparts 93.118 and 93.119 for transportation plans, Transportation Improvement Programs, or projects not from a conforming plan and Transportation Improvement Program, must include such regionally significant traffic signal synchronization projects.

## Regionally Significant Projects

The following codes identify the projects included in the "action" scenarios of the air quality analysis:

- A-20: Action Year 2020
- A-30: Action Year 2030
- A-40: Action Year 2040

## Appendix C

## Metropolitan Council Transportation Improvement Program (TIP) Amendments: Streamlined Process

## Conditions for Using a Streamlined Amendment Process

Any project that meets all of these criteria:

1) The federal funding for the project is from a program not administered by the Transportation Advisory Board and the Metropolitan Council.
2) The project is consistent with the adopted Transportation Policy Plan.
3) The project is not a regionally-significant project* or is a regionally-significant project currently in the TIP but is not changing the scope or any other elements that would potentially change the air quality conformity determination.

## OR

For projects funded through the Transportation Advisory Board and the Metropolitan Council, any project that meets these criteria as well as criteria 2 and 3 above:
4) The project does not relate to a scope change before the committee.
5) The project changes do not relate to solicitation scoring based on cost effectiveness.

## Process

The TIP amendment request is submitted as usual. Council staff will review each amendment request for these criteria. The Minnesota Interagency Air Quality and Transportation Planning Committee will, in its review of the project for air quality conformity determination, clarify if the project would be eligible for the streamlined process criterion for regional significance (\#3). If the project meets the overall criteria, Met Council staff emails the request for streamlining to the TAC Executive Committee, which approves or denies the streamlined process by email. If approved, the amendment moves as an action directly to TAB. If denied, the amendment would move through the full five-committee Council process (TAC Funding \& Programming Committee, TAC, TAB, Transportation Committee, and the Metropolitan Council). Information about streamlined amendments could be presented as information to the Funding and Programming Committee and TAC.

Example projects that could use this process:

- Congressional earmarks
- Projects funded through statewide programs, such as Section 5310 transit projects or Safe Routes to School (before 2017).
- Cost increases that do not affect the federal amount or project scope.
*In this context, "regionally significant" refers to the air quality conformity definition, which is:
"Regionally significant project means a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals
themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternatives to regional highway travel." [EPA Transportation Conformity Rules 93.101]

A project is generally considered regionally significant in the Twin Cities maintenance area if:

- It adds one or more travel lanes for over one mile,
- It involves the addition of an interchange, or
- It involves the reconfiguration of an interchange such that a movement is added or eliminated."
- [Transportation Conformity Procedures for Minnesota: A Handbook for Transportation and Air Quality Professionals, Minnesota Interagency Air Quality and Transportation Planning Committee]

## Appendix D

## Potential Changes to the Draft TIP

The project tables shown in the Transportation Improvement Program (TIP) are the result of an extensive effort undertaken by the Minnesota Department of Transportation. The attached draft shows the status of projects as of mid-April. In the meantime, project sponsors continue to refine project scopes and cost-projections. Due to ongoing efforts some projects are expected to change.

- 010-596-102 and 010-596-012F. Double-counting was recently discovered. For the final TIP, 010-596-102 will be reduced from $\$ 42,487,200$ to $\$ 23,737,200$ and 010-596-102F will be reduced from $\$ 41,296,000$ to $\$ 18,750,000$.

# INFORMATION ITEM 

DATE: May 10, 2019
TO: TAC Funding and Programming Committee
PREPARED BY: Joe Barbeau, Senior Planner (651-602-1705) Steve Peterson, Manager of Highway Planning and TAC/TAB Process (651-602-1819)
Elaine Koutsoukos, TAB Coordinator (651-602-1717)
SUBJECT: 2020 Regional Solicitation: Simple Changes
Feedback collected during and following the 2018 Regional Solicitation points to several potential improvements to the process. Some of these, including Equity (Measure 3A in all categories) and inclusion of the Regional Bicycle Barriers Study in the Gaps and Barriers measure (Measure 4A in the Multiuse Trail and Bicycle Facilities category) are ongoing and not included in the below discussion.

## General Considerations

## Federal Minimum and Maximum Funding amounts

Since the 2018 Regional Solicitation, several suggestions have been made regarding changes to the minimum and maximum federal funding awards. This includes potentially reducing the maximum Multiuse Trails and Bicycle Facilities award and increasing the maximum Roadway Expansion reward.

| Modes | Application Categories | Minimum Federal | Maximum Federal |
| :--- | :--- | :---: | :---: |
| Roadways <br> Including <br> Multimodal <br> Elements | Roadway Expansion | $\$ 1,000,000$ | $\$ 7,000,000$ |
|  | Roadway Recon / Mod and Spot Mobility | $\$ 1,000,000$ | $\$ 7,000,000$ |
|  | Traffic Management Technologies | $\$ 250,000$ | $\$ 7,000,000$ |
| Transit and TDM <br> Projects | Bridge Rehabilitation/Replacement | Transit Expansion | $\$ 1,000,000$ |
|  | Transit Modernization | $\$ 500,000$ | $\$ 7,000,000$ |
|  | Travel Demand Management (TDM) | $\$ 100,000$ | $\$ 7,000,000$ |
| Bicycle and <br> Pedestrian <br> Facilities | Multiuse Trails and Bicycle Facilities | $\$ 75,000$ | $\$ 500,000$ |
|  | Pedestrian Facilities | $\$ 250,000$ | $\$ 5,500,000$ |
|  | Safe Routes to School | $\$ 250,000$ | $\$ 1,000,000$ |

## ADA Transition Plan - Qualifying

In 2018, a public agency needed to have an Americans with Disabilities Act (ADA) transition plan or "be substantially working towards..." completion to qualify. The plan then, and now, was to require a completed plan.

## Origination of the Project

A new qualifying criterion is proposed that would require applicants to describe how the transportation problem was identified at the project location, how the potential solution was identified instead of other options, and the public involvement completed to date on the project.

## Leveraging Other Resources

The recent survey responses included some sentiment for awarding points to applications that have leveraged other funds. This could be a new measure under the Cost Effectiveness criterion. Some questions about this include:

- In which application categories would this be included? Only roadway applications?
- How many points would it be worth? It is currently shown as a part of the existing cost effectiveness measure where applicants would get the higher of the two scores (i.e., cost effectiveness or leveraging other resources)

## Multimodal Elements Scoring Tweak

Many funding categories include within their Multimodal Elements and Existing Conditions measure the following: "Scorers should make sure that new multimodal elements described in the response are accounted for on the cost estimate form earlier in the application." This has been confusing to scorers, who can score the measure just as well by reading the narrative. The application may still ask for inclusion of these elements in the cost estimate as a way to track multimodal investment requests, but it should be removed from the scoring guidance.

## Roadways

## Spot Mobility Category

Spot mobility projects (e.g., at-grade intersection improvements, turn lanes, roundabouts, reduced conflict intersections) can serve as cost-effective improvements to regional mobility and tie directly to the TPP. A $\$ 3.5$ million maximum award would be sufficient to fund most such projects, but more input is requested.

## Bridges

The Bridge application category is proposed to be folded into the Roadway Reconstruction and Modernization application category. Bridges would remain eligible for funding.

## Congestion Management Plan

Since the previous Regional Solicitation, the Congestion Management Plan (CMP) has been completed and could be included as part of Measure 1A, which measures level of congestion in the Roadway Expansion and Roadway Reconstruction/Modernization categories.

## Multiuse Trails and Bicycle Facilities - Prioritizing Criteria and Measures

## Measure 2B: Snow and Ice Control

The measure reads: "Confirm that the applicant and/or controlling jurisdiction has a maintenance plan or other policy that mandates snow and ice control to promote year-round usage." Fifty points were awarded for inclusion of (or reference to) a maintenance plan or policy for snow-removal for year-round use. Otherwise, no points were awarded.

This was a new measure in 2018 and was included after lengthy discussion that included the possibility of using it as a qualifying criterion. Its inclusion was based on the notion that the trails funded by TAB should be for year-round bicycle and pedestrian transportation. Applicants and scorers found the measure confusing in terms of what documentation should be provided and where to draw the line between a scoring and non-scoring application.

## Possible Solutions:

- Allow for partial scoring, as opposed to the "all-or-none" method used in 2018.
- Other ways to clarify or specify what needs to be provided and what results in points?

## Safe Routes to School Measures

## Measure 2B: Student Population

The measure reads: "Student population within one mile of the elementary school, middle school, or high school served by the project." In 2018, applicants interpreted this in various ways:

- Students at the school(s) in question
- Children in the age group of the school(s) in question
- Children between 5 and 18 years old
- All children below 18 years old.
- Within a mile of the project vs. within a mile of the school(s) (i.e., students to the west of a school are not served by a project to the east of the school)

The inconsistency was not able to be reconciled during the scoring period and was therefore nullified. Options to clarify one consistent way to measure this include:

- Students at the school(s) in question. Are schools able to track how many students live within a mile?
o Within a mile of the school(s)
o Within a mile of the project
o Within a mile of both the school(s) and project
- Children in the age group of the school(s) in question
- Children (between 5 and 18 years or 18 and below)
- Total population

## Linkage of Transportation Policy Plan (TPP)

 to the Regional Soliciation for Roadways

## Roadway ExpansionStrategic Capacity - Prioritizing Criteria and Measures

April 2, 2019
Definition: A roadway project that adds thru-lane capacity_-described as a Regional Mobility project under Strategic Capacity Enhancements in the TPP). Projects must be located on a non-freeway principal arterial or A-minor arterial functionally-classified roadway, consistent with the latest TAB approved functional classification map. However, A-minor connectors cannot be expanded with new thru-lane capacity with these federal funds per regional policy-and must apply in the
Reconstruction/Modernization and Spot Mobility application category.
Examples of Roadway Expansion Projects:

- New roadways
- Two-lane to four-lane expansions
- Other thru-lane expansions (excludes additions of a continuous center turn lane)
- Four-lane to six-lane expansions
- New interchanges with or without associated frontage roads
- Expanded interchanges with either new ramp movements or added thru lanes
- New bridges, overpasses and underpasses

## Scoring:

| Criteria and Measures | Points | \% of Total Points |
| :---: | :---: | :---: |
| 1. Role in the Regional Transportation System and Economy | 210 | 19\% |
| Measure A - Congestion Management Process, Level of Adjacent | 80 |  |
| Congestion, andor Principal Arterial Intersection Conversion Study |  |  |
| Priorities |  |  |
| Measure B - Project Location Relative to Jobs, Manufacturing, and | 50 |  |
| Education |  |  |
| Measure C - Regional Truck Corridor Study Tiers | 80 |  |
| 2. Usage | 175 | 16\% |
| Measure A - Current daily person throughput | 110 |  |
| Measure B - Forecast 2040 average daily traffic volume | 65 |  |
| 3. Equity and Housing Performance | 100 | 9\% |
| Measure A - Connection to disadvantaged populations and project's benefits, impacts, and mitigation | 30 |  |
| Measure B - Housing Performance Score | 70 |  |
| 4. Infrastructure Age | 40 | 4\% |
| Measure A - Date of construction | 40 |  |
| 5. Congestion Reduction/Air Quality | 150 | 14\% |
| Measure A - Vehicle delay reduced | 100 |  |
| Measure B-Kg of emissions reduced | 50 |  |
| 6. Safety | 150 | 14\% |
| Measure A - Crashes reduced | 150 |  |
| 7. Multimodal Elements and Existing Connections | 100 | 9\% |
| Measure A - Transit, bicycle, or pedestrian project elements \& connections | 100 |  |
| 8. Risk Assessment | 75 | 7\% |
| Measure A - Risk Assessment Form | 75 |  |
| 9. Cost Effectiveness | 100 | 9\% |
| Measure A - Cost effectiveness (total points awarded/total project cost)오 leveraging other resources (total points awarded/award requested) | 100 |  |

| Total |
| :--- |
| 1. Role in the Regional Transportation System and Economy (210 Points) - Tying regional |
| policy (Thrive MSP2040) to the Regional Solicitation, this criterion measures the project's ability to serve |
| a transportation purpose within the regional transportation system and economy based on the |
| Congestion Management Process speed data, congestion levels along the regional transportation system |
| near the project, how it aligns with the Principal Arterial Intersection Conversion Study, how it connects |
| to empoyment, manufacturing/distribution-related employment, and students, and how it aligns with |
| the Regional Truck Corridor Study. |

A. MEASURE: Identify the level of congestion within the project area. This measure uses speed data as was used as part of the Congestion Management Process (CMP) Plan. It is anticipated that the CMP Plan will be further incorporated into the Regional Solicitation as part of the 2022 Regional Solicitation funding cycle. Also, tidentify the level of congestion on a parallel route and how the project area is prioritized in the Principal Arterial Intersection Conversion Study. Respond to each of the two-three sub-sections below. Projects will get the highest score of the three sub-sections-sections.

Congestion within Project Area: Congestion Management Process:
The measure will analyze the level of congestion within the project area. Council staff will provide travel speed data on the "Level of Congestion" map. The analysis will compare the peak hour travel speed within the project area to free-flow conditions.

RESPONSE:

- Free-Flow Travel Speed:
- Peak Hour Travel Speed:
- Percentage Decrease in Travel Speed in Peak Hour Compared to Free-Flow (calculation):

Upload the "Level of Congestion" map used for this measure.

## Congestion on adjacent Parallel Routes:

The measure will analyze the level of congestion on an adjacent parallel A-minor arterial or principal arterial to determine the importance of the roadway in managing congestion on the Regional Highway System. Council staff will provide travel speed data on an applicant-selected adjacent parallel route that is adjacent to the proposed project on the "Level of Congestion" map. The analysis will compare the peak hour travel speed on an adjacent parallel route to free-flow conditions on this same route to understand congestion levels in the area of the project, which correlates to the role that the project plays in the regional transportation system and economy. The applicant must identify the adjacent parallel corridor as part of the response. The end points of this adjacent parallel corridor must align as closely as possible to the project end points.

## RESPONSE:

- Adjacent Parallel Corridor: $\qquad$
- Adjacent Parallel Corridor Start and End Points:
- Free-Flow Travel Speed): $\qquad$
- Peak Hour Travel Speed: $\qquad$
- Percentage Decrease in Travel Speed in Peak Hour Compared to Free-Flow (calculation): $\qquad$
Upload the "Level of Congestion" map used for this measure.
Principal Arterial Intersection Conversion Study:

The measure relies on the results of the Principal Arterial Intersection Conversion Study, which prioritized non-freeway principal arterial intersections. In addition to interchange projects, other lane expansion projects that make improvements to a low-, medium-, or high-priority intersection can also earn points in this measure.

Use the final study report for this measure: metrocouncil.org/PAICS
RESPONSE (Select one for your project, based on the Principal Arterial Intersection Conversion Study):

- Proposed interchange or at-grade project that reduces delay at a High Priority Intersection: Points)
- Proposed at-grade project that reduces delay at a Medium Priority Intersection: $\square$ (60 Points)
- Proposed at-grade project that reduces delay at a Low Priority Intersection: $\square$ (50 Points)
- Proposed interchange project that reduces delay at a Medium Priority Intersection: $\square$ (40 Points)
- Proposed interchange project that reduces delay at a Low Priority Intersection: $\square$ (0 Points)
- Not listed as a priority in the study: $\square$ (0 Points)

## SCORING GUIDANCE (80 Points)

Due to the three scoring methods, more than one project can score the maximum points. In order to be awarded points for this measure the proposed project itself must show some delay reduction in measure 5A. If the project does not reduce delay, then it will score 0 points for this measure.

Congestion within Project Area: The applicant with the most congestion within the project area (measured by the largest percentage decrease in peak hour travel speeds relative to free-flow conditions) will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored showed a $5 \%$ decrease of travel speeds in the peak hour relative to free flow conditions and the top project had a $10 \%$ reduction, this applicant would receive (5/10)*80 points, or 40 points. If the project covers more than one segment of speed data, the applicants can use the one that is most beneficial to their score.

Congestion on adjacent Parallel Routes: The applicant with the most congestion on an adjacent parallel route (measured by the largest percentage decrease in peak hour travel speeds relative to free-flow conditions) will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored showed a $5 \%$ decrease of travel speeds in the peak hour on the adjacent parallel route relative to free flow conditions and the top project had a $10 \%$ reduction, this applicant would receive $(5 / 10)^{*} 80$ points, or 40 points. Applicants can use the adjacent parallel route that is most beneficial to their score.

Principal Arterial Intersection Conversion Study: Projects will be scored based on their Principal Arterial Intersection Conversion Study priorities.

The scorer will assess if the applicant would score highest with congestion on the adjacent parallel routes part of the measure or the Principal Arterial Intersection Conversion Study part of the measure and give the applicant the highest of the two scores out of a maximum of 80 points. However, all interchange projects must only use the scoring output from the Principal Arterial Intersection Conversion Study.

Note: Due to the use of multiple sub-sections, multiple applicants may receive the full 80 points.
B. Reference the "Regional Economy" map generated at the beginning of the application process. Report the existing employment, manufacturing/distribution-related employment, and post-secondary students enrolled within one mile, as depicted on the "Regional Economy" map.

## RESPONSE (Data from the "Regional Economy" map):

- Existing Employment within 1 Mile: $\qquad$ (Maximum of 50 points)
- Existing Manufacturing/Distribution-Related Employment within 1 Mile: $\qquad$ (Maximum of 50 points)
- Existing Post-Secondary Students within 1 Mile: $\qquad$ (Maximum of 30 points)

Upload the "Regional Economy" map used for this measure.

## SCORING GUIDANCE (50 Points)

All Census block groups that are included within or intersect the buffer area around the project will be included.

The applicant with the highest existing total employment will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 1,000 workers within one mile and the top project had 1,500 workers, this applicant would receive $(1,000 / 1,500) * 50$ points or 33 points.

The applicant with the highest existing manufacturing/distribution-related employment will receive the full points. Remaining projects will receive a proportionate share of the full points equal to the existing manufacturing/distribution-related employment within one mile of the project being scored divided by the project with the highest manufacturing/distribution-related employment within one mile multiplied by the maximum points available for the measure. For example, if the application being scored had 1,000 manufacturing/distribution-related workers within one mile and the top project had 1,500 manufacturing/distribution-related workers, this applicant would receive ( $1,000 / 1,500$ ) $* 50$ points or 33 points.

The applicant with the highest number of post-secondary students will receive 30 points. Remaining projects will receive a proportionate share of the 30 points. For example, if the application being scored had 1,000 students within one mile and the top project had 1,500 students, this applicant would receive $(1,000 / 1,500) * 30$ points or 20 points.

The scorer will assess if the applicant would score highest with the total employment part of the measure, the manufacturing/distribution employment part of the measure, or the education part of the measure and give the applicant the highest of the three scores out of a maximum of 50 points.

Note: Due to the use of multiple sub-measures, two applicants can receive the full 50 points.
C. MEASURE: This criterion relies on the results on the Truck Highway Corridor Study, which prioritized all principal and minor arterials based on truck volume, truck percentage of total traffic, proximity to freight industry clusters, and proximity to regional freight terminals. (80 points)

Use the final study report for this measure:
https://metrocouncil.org/Transportation/Planning-2/Transit-Plans,-Studies-Reports/Highways-
Roads/Truck-Freight-Corridor-Study.aspx
RESPONSE: (Select one for your project, based on the Regional Truck Corridor Study):

- Along Tier 1:
- Along Tier 2:
- Along Tier 3:
- The project provides a direct and immediate connection (i.e., intersects) with either a Tier 1, Tier 2, or Tier 3 corridor:
- None of the tiers:

## SCORING GUIDANCE (80 Points)

Applicants will be awarded points as assigned in the above tiers:

- Projects along Tier 1: 80 points
- Projects along Tier 2: 60 points
- Projects along Tier 3: 40 points
- Projects that that provide a direct and immediate connection to a corridor: 10 points.
- None of the tiers: 0 points

If no applicant is along Tier 1, the top-scoring application(s) will be adjusted to 80 points, with the others adjusted proportionately.

Note: Due to the use of tiered scoring, multiple applications can receive the full points.
2. Usage (175 Points) - This criterion quantifies the project's potential impact by measuring the current daily person throughput and future vehicular traffic that will be served by the project. These roadway users directly benefit from the project improvements on the A-minor arterial or non-freeway principal arterial.
A. MEASURE: The applicant must identify the location along the project length and provide the current AADT volume from the MnDOT 50-series maps (select Twin Cities Metro Area Street Series under Traffic Volume (AADT)) and existing transit routes that travel on the road (reference "Transit Connections" map). Ridership data will be provided by the Metropolitan Council staff, if public transit is currently provided on the project length. Metropolitan Council staff will calculate the current daily person throughput at one location along the A-minor arterial or non-freeway principal arterial project length using the current average annual daily traffic (AADT) volume and average annual ridership.

- Current Daily Person Throughput = (current average annual daily traffic volume $\times 1.30$ vehicle occupancy) + average annual daily transit ridership (Z0172019)
- For new roadways, identify the estimated existing daily traffic volume based on traffic modeling.

## RESPONSE:

- Location:
- Current AADT volume:
- Existing Transit Routes on the Project:

Transit routes that will likely be diverted to the new proposed roadway (if applicable): $\qquad$ Upload "Transit Connections" map.

## SCORING GUIDANCE (110 Points)

The applicant with highest current daily person throughput will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily person throughput of 1,000 wicles-people and the top project the same functional classification-had a daily person throughput of 1,500 vehiclespeople, this applicant would receive $(1,000 / 1,500)^{*} 110$ points or 73 points.
B. MEASURE: Provide the forecast (2040) average daily traffic volume at the same location along the Aminor arterial or non-freeway principal arterial project length, as identified in the previous measure. The applicant may choose to use a county or city travel demand model based on the Metropolitan Council model to identify the forecast (2040) average daily traffic volume or have Metropolitan Council staff determine the forecast volume using the Metropolitan Council model and project location. Respond as appropriate to the use of one type of forecast model. ( 65 Points)

- For new roadways, identify the modeled forecast daily traffic volume

## RESPONSE:

- Use Metropolitan Council model to determine forecast (2040) ADT volume $\square$
- If checked, METC Staff will provide Forecast (2040) ADT volume $\qquad$
OR

## RESPONSE:

- Identify the approved county or city travel demand model to determine forecast (2040) ADT volume: $\qquad$
- Forecast (2040) ADT volume :

The applicant with the highest forecast (2040) ADT volume will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily forecast of 28,000 vehicles and the top project had a daily forecast of 32,000 vehicles, this applicant would receive $(28,000 / 32,000) * 65$ points or 57 points.
3. Equity and Housing Performance (100 Points) - This criterion addresses the Council's role in advancing equity by examining the project's positive and negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly along with outreach to those groups. The criterion also evaluates a community's efforts to promote affordable housing.
A. MEASURE: Reference the "Socio-Economic Conditions" map generated at the beginning of the application process. Identify the project's location from the list below, as depicted on the map. Geographic proximity alone is not sufficient to receive the full points. In order to receive the maximum points, the response should address equitable distribution of benefits, mitigation of negative impacts, and community engagement for the populations selected. ( 30 Points)

Upload the "Socio-Economic Conditions" map used for this measure.

## RESPONSE (Select one, based on the "Socio-Economic Conditions" map):

- Project located in Area of Concentrated Poverty with $50 \%$ or more of residents are people of color (ACP50): $\square$ (up to $100 \%$ of maximum score)
- Project located in Area of Concentrated Poverty: $\square$ (up to $80 \%$ of maximum score)
- Project's census tracts are above the regional average for population in poverty or population of color: $\square$ (up to $60 \%$ of maximum score)
- Project located in a census tract that is below the regional average for population in poverty or populations of color, or includes children, people with disabilities, or the elderly: $\square$ (up to $40 \%$ of maximum score)

1. ( 0 to 3 points) A successful project is one that has actively engaged in low-income populations, people of color, children, persons with disabilities, and the elderly during the project's development with the intent to limit negative impacts on them and, at the same time, provide the most benefits. Describe how the project has encouraged or will engage the full cross-section of community in decision-making. Identify the communities to be engaged and where in the project development process engagement has occurred or will occur. Elements of quality engagement include: outreach to specific communities and populations that are likely to be directly impacted by the project; techniques to reach out to populations traditionally not involved in the community engagement related to transportation projects; residents or users identifying potential positive and negative elements of the project; and surveys, study recommendations, or plans that provide feedback from populations that may be impacted by the proposed project. If relevant, describe how NEPA or Title VI regulations will guide engagement activities.
(Limit 1,400 characters; approximately 200 words):
2. ( 0 to 7 points) Describe the project's benefits to low-income populations, people of color, children, people with disabilities, and the elderly. Benefits could relate to safety; public health; access to destinations; travel time; gap closure; leveraging of other beneficial projects and investments; and/or community cohesion. Note that this is not an exhaustive list.

[^3]3. ( -3 to 0 points) Describe any negative externalities created by the project along with measures that will be taken to mitigate them. Negative externalities can result in a reduction in points, but mitigation of externalities can offset reductions.
(Limit 2,800 characters; approximately 400 words):

Below is a list of negative impacts. Note that this is not an exhaustive list.

- Increased difficulty in street crossing caused by increased roadway width, increased traffic speed, wider turning radii, or other elements that negatively impact pedestrian access.
- Increased noise.
- Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.
- Project elements that are detrimental to location-based air quality by increasing stop/start activity at intersections, creating vehicle idling areas, directing an increased number of vehicles to a particular point, etc.
- Increased speed and/or "cut-through" traffic.
- Removed or diminished safe bicycle access.
- Inclusion of some other barrier to access to jobs and other destinations.
- Displacement of residents and businesses.
- Construction/implementation impacts such as dust; noise; reduced access for travelers and to businesses; disruption of utilities; and eliminated street crossings. These tend to be temporary.
- Other

## SCORING GUIDANCE (30 Points)

Each application will be scored on a 10-point scale as described below.

1. (3 points): The project(s) with the most impactful and meaningful community engagement will receive the full three points. Remaining projects will receive a share of the full points at the scorer's discretion.
2. (7 points) The project(s) with the most positive benefits will receive the full seven points. Remaining projects will receive a share of the full points at the scorer's discretion.
3. ( -3 to 0 points) The scorer will reduce the score by one point (up to three total) for each negative externality. Note that the scorer can deduct points for negatives not acknowledged in the application; the scorer will document any negatives not acknowledged in the application and the reasons for any associated point reductions. The scorer can add one to three points for successful mitigation of negative project elements based on the degree to which they are mitigated. Note that this score cannot provide more points than are deducted.
Each score from the above 10-point scale will then be adjusted to the appropriate geography.
Note: Due to the geographic adjustment to scores, it is possible that the above process will result in no project receiving the maximum allotment of points. In this case, the highest-scoring application for this measure will be adjusted to receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 10 points and the top project had 20 points, this applicant would receive $(10 / 20)^{*} 30$ points or 15 points. Note also that it is possible to score negative points on this measure.
B. MEASURE: Metropolitan Council staff will award points to the project based on the $2017 \underline{20189}$ Housing Performance Score for the city or township in which the project is located. The score includes consideration of affordability and diversification, local initiatives to facilitate affordable workforce housing development or preservation, and density of residential development. If the project is in more than one jurisdiction, the points will be awarded based on a weighted average using the length or population of the project in each jurisdiction.

For stand-alone intersection, bridge, underpass, and interchange projects, a one-mile radius-buffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

## RESPONSE:

- City/Township:
- Length of Segment (For stand-alone projects, enter population from Regional Economy map) within each City/Township:
- Housing Score: $\qquad$ (online calculation)

## SCORING GUIDANCE (70 Points)

The applicant with the highest Z0172019 Housing Performance Score will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a Housing Performance Score of 55 and the top project had a Housing Performance Score of 90, this applicant would receive $(55 / 90) * 70$ points or 43 points.

Note: Metropolitan Council staff will score this measure.
Projects will use the city Housing Performance Score based on the project location. If a project is located in more than one jurisdiction, the points will be awarded based on a weighted average of the city or township scores for the project location based on the length of the project in each jurisdiction. For stand-alone intersection, bridge, underpass, and interchange projects, a one-mile radius-buffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

If this is the case, then the total points possible in the application will be 930 instead of 1,000 . The total points awarded through the rest of the application ( 900 as a hypothetical example) will be divided by 930 , then multiplied by 1,000 . Therefore, a project scoring 900 out of 930 , will equate to 968 points on a 1,000point scale.

If a portion of the project is located in a city with an affordable housing allocation and the other portion is located in a township with no affordable housing allocation, then a combination of the weighted average and no affordable housing methodologies should be used. This will result in a total score that will be somewhere between 930 and 1,000; then the score will need to be adjusted to fit a 1,000-point scale.
4. Infrastructure Age (40 Points) - This criterion will assess the age of the roadway facility being improved. Roadway improvement investments should focus on the higher needs of an aging facility, whereas improvements to a recently reconstructed roadway does not display an as efficient use of funds.
A. MEASURE: Identify the year of the roadway's original construction or most recent reconstruction. If the reconstruction date is used for the roadway, a full reconstruction must have been completed during the indicated year. Routine maintenance, such as an overlay or sealcoating project does not constitute a reconstruction and should not be used to determine the infrastructure age.

If construction was completed over several years, enter the segment lengths for each year. The average age will be calculated.

In order to enter information, click "Add" (in the upper right-hand corner of the page) and then click "Save". If the project length has more than one construction year, repeat the "Add" and "Save" process for each segment.

- For new roadways, identify the average age of the parallel roadways from which traffic will be diverted to the new roadway.

## RESPONSE:

- Year of original roadway construction or most recent reconstruction: $\qquad$
- Segment length: $\qquad$
- Average Age: $\qquad$ (online calculation)

## SCORING GUIDANCE (40 Points)

The applicant with the oldest roadway will receive full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored was constructed 41 years ago and the oldest project was constructed 48 years ago, this applicant would receive (41/48)*40 points or 34 points.

This measure is not applicable to new roadway projects, so the project's total score for new roadways will be adjusted as a result.

If this is the case, then the total points possible in the application will be 960 instead of 1,000. The total points awarded through the rest of the application ( 900 as a hypothetical example) will be divided by 960 , then multiplied by 1,000. Therefore, a project scoring 900 out of 940 , will equate to 957 points on a 1,000-point scale.

Note: Because of the reporting of year of construction, it is possible for multiple projects to receive the full allotment of 40 points.
5. Congestion Reduction/Air Quality (150 Points) - This criterion measures the project's ability to reduce intersection delay and emissions during peak hour conditions. In addition, it will address its ability to improve congested intersections operating at unacceptable levels of service during peak hour conditions.
A. MEASURE: Conduct a capacity analysis at one or more of the intersections (or rail crossings) being improved by the roadway project using existing turning movement counts (collected within the last three years) in the weekday a.m. or p.m. peak hour and Synchro or HCM software. The analysis must include build and no build conditions (with and without the project improvements). The applicant must show the current total peak hour delay at one or more intersections (or rail crossings) and the reduction in total peak hour intersection delay at these intersections (or rail crossings) in seconds, due to the project. If more than one intersection is examined, then the delay reduced by each intersection (or rail crossing) can be can added together to determine the total delay reduced by the project.

- For new roadways, identify the key intersection(s) on any parallel roadway(s) that will experience reduced delay as a result of traffic diverting to the new roadway. If more than one intersection is examined, then the delay reduced by each intersection can be can added together.
- For roadway projects that include a railroad crossing, the applicant should conduct fieldwork during either the weekday a.m. or p.m. peak hour to determine the total peak hour delay reduced by the project. Applicants can also add together intersection delay reduced and railroad delay reduced, if they both will be improved by the project.

The applicant should include the appropriate Synchro or HCM full reports (including the Timing Page Report) that support the improvement in total peak hour delay and should conduct the analysis using the following:

- Under the network settings, all defaults should be used for lanes, saturation flow rates, volumes, and simulation
- Use Synchro's automatic optimization to determine cycle, offset and splits (for traffic signals). Use the setting when assessing delay both with and without the project. This methodology will ensure that all applicants start with their signal systems optimized when determining existing delay.
- Project improvements assumed in the build condition should be reflected in the total project cost, such as additional through or turn lanes and protective left-turn phasing
- Roadway lengths for intersection approaches must be the same length for before and after scenarios
- An average weekday should be used for the existing conditions instead of a weekend, peak holiday, or special event time period that is not representative of the corridor for most of the year
- For most projects, the volumes with and without the project should be the same; however, some project types such as new roadways, new ramps, or new interchanges may have different volumes.

Total Peak Hour Delay Reduced (Seconds) = Total Peak Hour Delay Per Vehicle x Vehicles Per Hour
RESPONSE:

- Total Peak Hour Delay/Vehicle without the Project (Seconds/Vehicle):
- Total Peak Hour Delay/Vehicle with the Project (Seconds/Vehicle):
- Total Peak Hour Delay/Vehicle Reduced by the Project (Seconds/Vehicle): (automatically calculated)
- Volume without the Project (Vehicles Per Hour): $\qquad$
- Volume with the Project (Vehicles Per Hour):
- Total Peak Hour Delay Reduced by the Project (Seconds): $\qquad$ (automatically calculated)

## EXPLANATION of methodology used to calculate railroad crossing delay, if applicable, or date of last signal retiming for signalized corridors (Limit 1,400 characters; approximately 200 words):

Upload Synchro or HCM Report

## SCORING GUIDANCE (100 Points)

The applicant with the most peak hour vehicle delay reduced by the project improvement will receive the full points for the measure. Remaining projects will receive a proportionate share of the points. For example, if the application being scored reduced delay by 5,000 seconds and the top project reduced delay by 25,000 seconds, this applicant would receive $(5,000 / 25,000) * 100$ points, or 20 points.
B. MEASURE: Using the Synchro or HCM analysis completed in the previous measure, identify the total peak hour emissions reduction in kilograms ( $\mathrm{CO}, \mathrm{NO}_{x}, \mathrm{VOC}$ ) due to the project. The applicant should include the appropriate Synchro or HCM reports (including the Timing Page Report) that support the improvement in total peak hour emissions. If more than one intersection is examined, then the emissions reduced by each intersection can be can added together to determine the total emissions reduced by the project.

## Roadway projects that do not include new roadway segments or railroad grade-separation elements:

- Total Peak Hour Emissions Reduced (Kilograms) = Total Peak Hour Emissions without the project - Total Peak Hour Emissions with the Project

## RESPONSE (Calculation):

- Total (CO, NO $x$, and VOC) Peak Hour Emissions without the Project (Kilograms): $\qquad$
- Total (CO, NOx , and VOC) Peak Hour Emissions with the Project (Kilograms):
- Total (CO, NOx , and VOC) Peak Hour Emissions Reduced by the Project (Kilograms):

Roadway projects that are constructing new roadway segments, but do not include railroad gradeseparation elements:

For new roadways, identify the key intersection(s) on any parallel roadway(s) that will experience reduced emissions as a result of traffic diverting to the new roadway (using Synchro). If more than one intersection is examined, then the emissions reduced by each intersection can be can added together.

However, new roadways will also generate new emissions compared to existing conditions as traffic diverts from the parallel roadways. The applicant needs to estimate four variables to determine the new emissions generated once the project is completed on any major intersections. Those variables include: speed, vehicle mile traveled, delay, and total vehicle stops. The applicant needs to detail any assumptions used for conditions after the project is built. The variables will be used in the exact same equation used Synchro required of the other project types.

The equation below should only be used to estimate the new emissions generated by new roadways.
Enter data for Parallel Roadways and New Roadways.

## Parallel Roadways

- Total Peak Hour Emissions Reduced (Kilograms) = Total Peak Hour Emissions without the project - Total Peak Hour Emissions with the Project

## RESPONSE:

- Total (CO, $\mathrm{NO}_{\mathrm{x}}$, and VOC) Peak Hour Emissions without the Project (Kilograms): $\qquad$ (Applicant inputs number)
- Total (CO, $\mathrm{NO}_{x}$, and VOC) Peak Hour Emissions with the Project (Kilograms): $\qquad$ (Applicant inputs number)
- Total (CO, NOx, and VOC) Peak Hour Emissions Reduced by the Project (Kilograms): $\qquad$ (Online Calculation)

## New Roadway Portion

Enter data for New Roadway.

- Cruise speed in miles per hour with the project: $\qquad$ (Applicant inputs number)
- Vehicle miles traveled with the project: $\qquad$ (Applicant inputs number)
- Total delay in hours with the project: $\qquad$ (Applicant inputs number)
- Total stops in vehicles per hour with the project: $\qquad$ (Applicant inputs number)
- Fuel consumption in gallons: $\qquad$ (Applicant inputs number)
- Total (CO, NOX, and VOC) Peak Hour Emissions Reduced or Produced on New Roadway (Kilograms): $\qquad$
- EXPLANATION of methodology and assumptions used: (Limit 1,400 characters; approximately 200 words)

Speed = cruise speed in miles per hour
Total Travel = vehicle miles traveled
Total Delay = total delay in hours
Stops = total stops in vehicles per hour
$K 4=0.075283-0.0015892 *$ Speed $+0.000015066 *$ Speed $^{2}$
$K 2=0.7329$
$K 5=0.0000061411 *$ Speed $^{2}$
F2 = Fuel consumption in gallons
$C O=F 2$ * $0.0699 \mathrm{~kg} / \mathrm{gallon}$
$\mathrm{NO}_{\mathrm{x}}=F 2$ * $0.0136 \mathrm{~kg} /$ gallon
VOC $=F 2$ * $0.0162 \mathrm{~kg} /$ gallon
Total $=$ Total Peak Hour Emissions reduced on Parallel Roadways $-(C O+N O x+V O C)$

- Total (CO, NOX, and VOC) Peak Hour Emissions Reduced by the Project (Kilograms):
$\qquad$ (calculated online)

## Roadway projects that include railroad grade-separation elements:

For roadway projects that include a railroad crossing, the applicant needs to input four variables before and after the project to determine the change in emissions. Those variables include: speed, vehicle mile traveled, delay, and total vehicle stops. The applicant needs to conduct fieldwork during
either the a.m. or p.m. peak hour to determine the existing conditions and then detail any assumptions used for conditions after the project is built. The variables will be used in the exact same equation used within the software program (i.e., Synchro) required of the other project types. Therefore, the approach to calculate the kilograms emissions reduced for railroad grade-separation projects will be comparable to intersection improvement projects.

## RESPONSE:

- Cruise speed in miles per hour without the project: $\qquad$ (Applicant inputs number)
- Vehicle miles traveled without the project: $\qquad$ (Applicant inputs number)
- Total delay in hours without the project: $\qquad$ (Applicant inputs number)
- Total stops in vehicles per hour without the project: $\qquad$ (Applicant inputs number)
- Cruise speed in miles per hour with the project: $\qquad$ (Applicant inputs number)
- Vehicle miles traveled with the project: $\qquad$ (Applicant inputs number)
- Total delay in hours with the project: $\qquad$ (Applicant inputs number)
- Total stops in vehicles per hour with the project: $\qquad$ (Applicant inputs number)
- Fuel consumption in gallons (F1)
- Fuel consumption in gallons (F2)
- Fuel consumption in gallons (F3)

$$
\begin{aligned}
& \text { Speed = cruise speed in miles per hour } \\
& \text { Total Travel = vehicle miles traveled } \\
& \text { Total Delay = total delay in hours } \\
& \text { Stops = total stops in vehicles per hour } \\
& \text { K1 }=0.075283-0.0015892 * \text { Speed }+0.000015066 * \text { Speed }^{2} \\
& K 2=0.7329 \\
& K 3=0.0000061411 * \text { Speed }^{2} \\
& \text { F1 (or F2 - without the project) = Fuel consumption in gallons } \\
& \text { F1 }=\text { Total Travel * k1 + Total Delay * k2 + Stops * k3 } \\
& \text { F2 }=\text { Total Travel } * k 1+\text { Total Delay * k2 + Stops * k3 } \\
& F 3=F 1-F 2 \\
& \text { CO = F3 * } 0.0699 \mathrm{~kg} / \mathrm{gallon} \\
& \mathrm{NO}_{\mathrm{x}}=F 3 \text { * } 0.0136 \mathrm{~kg} / \text { gallon } \\
& \text { VOC }=F 3 \text { * } 0.0162 \mathrm{~kg} / \text { gallon }
\end{aligned}
$$

Equation Automatically Provides Emissions Reduced:

- Total (CO, NOx and VOC) Peak Hour Emissions Reduced by the Project (Kilograms): (Online Calculation)
EXPLANATION of methodology and assumptions used (Limit 1,400 characters; approximately 200 words):

## SCORING GUIDANCE (50 Points)

The applicant with the most kilograms reduced by the project improvement will receive the full points for the measure. Remaining projects will receive a proportionate share of the full. For example, if the application being scored reduced emissions by 3 kilograms and the top project reduced emissions by 5 kilograms, this applicant would receive $(3 / 5) * 50$ points or 30 points.
6. Safety (150 Points) - This criterion addresses the project's ability to correct deficiencies and improve the overall safety of an existing or future roadway facility. It will assess the project's monetized safety benefits.
A. MEASURE: Respond as appropriate to one of the two project types below.

## Roadway projects that do not include railroad grade-separation elements:

Calculate the reduction in the total number of crashes due to improvements on the A-minor arterial or non-freeway principal arterial made by the project. The applicant must base the estimate of crash reduction on the methodology consistent with the latest Highway Safety Improvement Program (HSIP) application (www.dot.state.mn.us/stateaid/trafficsafety.html). Applicants should focus on the crash analysis for reactive projects.

Crash data must be obtained for the project length using the MnDOT TIS system average for calendar years 2013-2017 through 20152019. Crash data should include all crash types and severities, including pedestrian and bicycle crashes.
Applicants should request crash data from MnDOT as early as possible. The applicant must then attach a listing of the crashes reduced and the HSIP Benefit/Cost (B/C) worksheet (www.dot.state.mn.us/stateaid/trafficsafety.html) that identifies the resulting benefit associated with the project. As part of the response, please detail and attach the crash modification factor(s) used from FHWA's Crash Modification Factors Clearinghouse: http://www.cmfclearinghouse.org/. This measure requests the monetized safety benefit of the project. The cost of the project is scored in the Cost Effectiveness criterion.

## New Roadways:

1. For new roadways, identify the parallel roadway(s) from which traffic will be diverted to the new roadway.
2. Using the crash data for 20132017-20152019, calculate the existing crash rate for the parallel roadway(s) identified in Step 1.
3. Identify the daily traffic volume that will be relocated from the parallel roadway(s) to the new roadway.
4. Calculate the number of crashes on the parallel roadway(s) using the existing crash rate from Step 2 and the relocated traffic volume to determine the change in number of crashes due to the relocated traffic volume. For instance, if 5,000 vehicles are expected to relocate from the existing parallel roadway to the new roadway, calculate the number of crashes related to the 5,000 vehicles.
5. Identify the average crash rate for the new roadway using MnDOT's average crash rates by roadway type. Using the average crash rate for the new roadway, calculate the number of crashes related to the relocated traffic (i.e., the 5,000 vehicles).
6. Calculate the crash reduction factor using the existing number of crashes on the existing parallel roadway (Step 4) compared to the estimated crashes calculated for the new roadway (Step 5), due to the relocated traffic volume (i.e., the 5,000 vehicles).
7. The calculated crash reduction factor should be used in the HSIP B/C worksheet.
8. Upload additional documentation materials into the "Other Attachments" Form in the online application.

## RESPONSE:

- Crash Modification Factor Used (Limit 700 characters; approximately 100 words): $\qquad$
- Rationale for Crash Modifications Selected (Limit 1,400 characters; approximately 200 words):
- Project Benefit (\$) from B/C ratio: $\qquad$

## Roadway projects that include railroad grade-separation elements:

Since the number of observed crashes at an existing at-grade railroad crossing is minor compared to an intersection, this measure will assess crash risk exposure that exists in order to compare projects. As a proactive safety measure, railroad grade-separation projects eliminate the crash risk exposure.

- Crash Risk Exposure Eliminated = current average annual daily traffic volume $x$ average number of daily trains at the at-grade crossing

## RESPONSE (Calculation):

- Current AADT volume: $\qquad$
- Average daily trains: $\qquad$
- Crash Risk Exposure eliminated: (automatically calculated)

## SCORING GUIDANCE (150 Points)

This measure will be considered separately for projects that do and do not include a railroad gradeseparation project. As a result, two projects (one project without a railroad grade-separation project and one with a railroad grade-separation project) may receive the full points.

For projects that do not include a grade-separation project, the applicant with the highest dollar value of benefits will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had safety benefits of $\$ 11,000,000$ and the top project had safety benefits of $\$ 16,000,000$, this applicant would receive $(11,000,000 / 16,000,000) * 150$ points or 103 points.

For railroad grade-separation projects, the applicant with the highest crash risk exposure eliminated due to the project will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored reduced 11,000 exposures and the top project reduced 16,000 exposures this applicant would receive (11,000 $/ 16,000)^{*} 150$ points or 103 points.
7. Multimodal Elements and Existing Connections (100 Points) - This criterion measures how the project improves the travel experience, safety, and security for other modes of transportation and addresses the safe integration of these modes. The Transportation Policy Plan requires that explicit consideration of all users of the transportation system be considered in the planning and scoping phase of roadway projects.
A. MEASURE: Describe how the project positively affects the multimodal system.

- Discuss any bicycle, pedestrian, or transit elements that are included as part of the project and how they improve the travel experience, safety, and security for users of these modes. Applicants should make sure that new multimodal elements described in the response are accounted for as part of the cost estimate form earlier in the application. Applicants should note if there is no transit service in the project area and identify supporting studies or plans that address why a mode may not be incorporated in the project (e.g., a bicycle system plan that locates bikeway facilities on a lower-volume parallel route).
- Describe how the proposed multimodal improvements positively affect identified alignments in the Regional Bicycle Transportation Network (RBTN) or along a regional trail, if applicable.
- Describe how the proposed multimodal improvements either provide a new, or improve an existing a Major River Bicycle Barrier Crossing (MRBBC) as defined in the 2040 Transportation Policy Plan (TPP) or an identified Regional Bicycle Barrier Improvement Area as defined in the TPP and Technical Addendum to the Regional Bicycle Barriers Study (May 2019), if applicable.
- Discuss the existing bicycle, pedestrian, and transit connections and how the project enhances these connections.
- Discuss whether the project implements specific locations identified as being deficient in a completed ADA Transition Plan.
RESPONSE (Limit 2, 800 characters; approximately 400 words):

[^4]8. Risk Assessment ( 75 Points) - This criterion measures the number of risks associated with successfully building the project. High-risk applications increase the likelihood that projects will withdraw at a later date. If this happens, the region is forced to reallocate the federal funds in a short amount of time or return them to the US Department of Transportation. These risks are outlined in the checklist in the required Risk Assessment.
A. MEASURE: Applications involving construction must complete the Risk Assessment. This checklist includes activities completed to-date, as well as an assessment of risks (e.g., right-of-way acquisition, proximity to historic properties, etc.).

## RESPONSE (Complete Risk Assessment):

Please check those that apply and fill in anticipated completion dates for all projects, except for new/expanded transit service projects or transit vehicle purchases.

1) Layout (30 Percent of Points)

Layout should include proposed geometrics and existing and proposed right-of-way boundaries $100 \% \square$ Layout approved by the applicant and all impacted jurisdictions (i.e., cities/counties that the project goes through or agencies that maintain the roadway(s)). A PDF of the layout must be attached along with letters from each jurisdiction to receive points.
$50 \% \quad \square$ Layout completed but not approved by all jurisdictions. A PDF of the layout must be attached to receive points.
0\% $\quad \square$ Layout has not been started
Anticipated date or date of completion: $\qquad$
2) Review of Section 106 Historic Resources ( $\mathbf{2 0}$ Percent of Points)
$100 \% \square$ No known historic properties eligible for or listed in the National Register of Historic Places are located in the project area, and project is not located on an identified historic bridge
$100 \% \square$ There are historical/archeological properties present but determination of "no historic properties affected" is anticipated.
80\% $\square$ Historic/archeological property impacted; determination of "no adverse effect" anticipated
40\% $\square$ Historic/archeological property impacted; determination of "adverse effect" anticipated
$0 \% \quad \square$ Unsure if there are any historic/archaeological properties in the project area.
Project is located on an identified historic bridge:
3) Right-of-Way (30 Percent of Points)
$100 \% \square$ Right-of-way, permanent or temporary easements either not required or all have been acquired
50\% $\square$ Right-of-way, permanent or temporary easements required, plat, legal descriptions, or official map complete
25\% $\square$ Right-of-way, permanent or temporary easements required, parcels identified
$0 \% \quad \square$ Right-of-way, permanent or temporary easements required, parcels not all identified
Anticipated date or date of acquisition $\qquad$

## 4) Railroad Involvement ( 20 Percent of Points)

$100 \% \square$ No railroad involvement on project or railroad Right-of-Way agreement is executed (include signature page, if applicable)
50\% $\square$ Railroad Right-of-Way Agreement required; negotiations have begun
0\% $\quad \square$ Railroad Right-of-Way Agreement required; negotiations have not begun.
Anticipated date or date of executed Agreement $\qquad$
SCORING GUIDANCE (75 Points)
The applicant with the most points on the Risk Assessment (more points equate to less project risk) will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 40 points and the top project had 70 points, this applicant would receive $(40 / 70) * 75$ points or 43 points.
9. Cost Effectiveness (100 Points) - This criterion will assess the project's cost effectiveness or ability to leverage outside funding sources aned on the total TAB-eligible project cost (not including noise walls) and total points awarded in the previous 8 criteria.

## A. MEASURE:

## Cost Effectiveness:

This measure will calculate the cost effectiveness of the project. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the TAB-eligible project cost (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/total TAB-eligible project cost (not including noise walls)
RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):
- Total Project Cost (entered in Project Cost Form): $\qquad$ (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: $\qquad$ (entered by Metropolitan Council staff)

## Leveraging Outside Funding Sources:

This measure will calculate the cost effectiveness of the project and how well the project leverages outside funding sources. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the requested award (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/requested award (not including noise walls)

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Award Request: (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: (entered by Metropolitan Council staff)

SCORING GUIDANCE (100 Points)
Due to the two scoring methods, more than one project can score the maximum points
Cost Effectiveness: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

Leveraging Outside Funding Sources: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

The scorer for this measure will also complete a reasonableness check of the total project cost that is used for this measure. The scorer may follow up with the applicant to clarify any questions. Up to 50 percent of points awarded for this measure can be deducted if the scorer does not believe that the cost estimate is reasonable.
The scorer will assess if the applicant would score highest with the cost effectiveness part of the measure or the leveraging of outside funding sources part of the measure and give the applicant the highest of the two scores out of a maximum of 100 points.

Note: Due to the use of multiple sub-sections, multiple applicants may receive the full 100 points.

## TOTAL: 1,100 POINTS

# Roadway and Bridge Reconstruction/Modernization and Spot Mobility- Prioritizing Criteria and Measures 

April 15, 2019
Definition: A roadway project that does not add thru-lane capacity, but reconstructs, reclaims, and/or modernizes the roadway with improved safety, multimodal, or,or_adds new-spot_mobility elements (e.g., new turn lanes, traffic signal, or roundabout). Bridge rehabilitation or replacement projects are also eligible. Routine maintenance including mill and overlay projects are not eligible. Projects must be located on a non-freeway principal arterial or A-minor arterial functionally-classified roadway, consistent with the latest TAB approved functional classification map.
Examples of Roadway and Bridge Reconstruction/Modernization and Spot MobilityProjects:

- Bridge Rehabilitation or Replacement
- Intersection improvements or alternative intersections such as unsignalized or signalized reduced conflict intersections.
- Interchange reconstructions that do not involve new ramp movements or added thru lanes
- Turn lanes
- Two-lane to three-lane conversions (with a continuous center turn lane)
- Four-lane to three-lane conversions
- Roundabouts

## Scoring:

| Criteria and Measures | Points | \% of Total Points |
| :---: | :---: | :---: |
| 1. Role in the Regional Transportation System and Economy | 170 | 15\% |
| Measure A - Congestion Management Process, Level of Adjacent Congestion, Principal Arterial Intersection Conversion Study Priorities, andor Congestion Management and Safety Plan Opportunity Areas <br> Measure B - Project Location Relative to Jobs, Manufacturing, and Education Measure C - Regional Truck Corridor Study Tiers | 65 40 65 |  |
| 2. Usage | 175 | 16\% |
| Measure A - Current daily person throughput | 110 |  |
| Measure B - Forecast 2040 average daily traffic volume | 65 |  |
| 3. Equity and Housing Performance | 100 | 9\% |
| Measure A - Connection to disadvantaged populations and project's benefits | 30 |  |
| Measure B - Housing Performance Score | 70 |  |
| 4. Infrastructure Age/Condition | 150 | 14\% |
| Measure A - Date of construction | 50 |  |
| Measure B-Geometric, structural, or infrastructure improvements or bridge sufficiency rating | 100 |  |
| 5. Congestion Reduction/Air Quality | 80 | 7\% |
| Measure A - Vehicle delay reduced | 50 |  |
| Measure B-Kg of emissions reduced | 30 |  |
| 6. Safety | 150 | 14\% |
| Measure A - Crashes reduced | 150 |  |
| 7. Multimodal Elements and Existing Connections | 100 | 9\% |
| Measure A - Transit, bicycle, or pedestrian project elements and connections | 100 |  |
| 8. Risk Assessment | 75 | 7\% |
| Measure A - Risk Assessment Form | 75 |  |

Roadway and Bridge Reconstruction/Modernization and Spot Mobility

| Criteria and Measures | Points | \% of Total Points |
| :--- | :---: | :---: | :---: |
| 9. Cost Effectiveness | $\mathbf{1 0 0}$ | $\mathbf{9 \%}$ |
| Measure A - Cost effectiveness (total points awarded/total project cost) or <br> leveraging other resources (total points awarded/award requested) | $\mathbf{1 0 0}$ |  |
| Total | $\mathbf{1 , 1 0 0}$ |  |

1. Role in the Regional Transportation System and Economy (170 Points) - Tying regional policy (Thrive MSP2040) to the Regional Solicitation, this criterion measures the project's ability to serve a transportation purpose within the regional transportation system and economy based on congestion levels along the regional transportation system near the project; how it aligns with the Principal Arterial Intersection Conversion Study and Congestion Management and Safety Plan IV; how it connects to employment, manufacturing/distribution-related employment, and post-secondary students; and how it aligns with the Regional Truck Corridor Study.
A. MEASURE: Identify the level of congestion within the project area. This measure uses speed data as was used as part of the Congestion Management Process (CMP) Plan. It is anticipated that the CMP Plan will be further incorporated into the Regional Solicitation as part of the 2022 Regional Solicitation funding cycle. Also, itdentify the level of congestion on a parallel route and how the project area is prioritized in the Principal Arterial Intersection Conversion Study and the latest Congestion Management and Safety Plan. Respond to each of the three-four sub-sections below. Projects will get the highest score of the four three-sub-sections sections.

Congestion within Project Area: Congestion Management Process:
The measure will analyze the level of congestion within the project area. Council staff will provide travel speed data on the "Level of Congestion" map. The analysis will compare the peak hour travel speed within the project area to free-flow conditions.

RESPONSE:

- Free-Flow Travel Speed:
- Peak Hour Travel Speed:
- Percentage Decrease in Travel Speed in Peak Hour Compared to Free-Flow (calculation):

Upload the "Level of Congestion" map used for this measure.

## Congestion on Adjacent Parallel Routes:

The measure will analyze the level of congestion on an adjacent parallel A-minor arterial or principal arterial to determine the importance of the roadway in managing congestion on the Regional Highway System. Council staff will provide travel speed data on an applicant-selected parallel route that is adjacent to the proposed project on the "Level of Congestion" map. The analysis will compare the peak hour travel speed on an adjacent parallel route to free-flow conditions on this same route to understand congestion levels in the area of the project, which correlates to the role that the project plays in the regional transportation system and economy. The applicant must identify the adjacent parallel corridor as part of the response. The end points of this adjacent parallel corridor must align as closely as possible to the project end points.

## RESPONSE :

- Adjacent Parallel Corridor: $\qquad$
- Adjacent Parallel Corridor Start and End Points: $\qquad$
- Free-Flow Travel Speed:
- Peak Hour Travel Speed: $\qquad$
- Percentage Decrease in Travel Speed in Peak Hour Compared to Free-Flow (calculation):

Upload the "Level of Congestion" map used for this measure.

## Principal Arterial Intersection Conversion Study:

The measure relies on the results of the Principal Arterial Intersection Conversion Study, which prioritized non-freeway principal arterial intersections.

Use the final study report for this measure: metrocouncil.org/PAICS

## RESPONSE (Select one for your project):

- Proposed at-grade project that reduces delay at a High Priority Intersection: $\square$ ( 65 Points)
- Proposed at-grade project that reduces delay at a Medium Priority Intersection: $\square$ (55 Points)
- Proposed at-grade project that reduces delay at a Low Priority Intersection: $\square$ (45 Points)
- Not listed as a priority in the study: $\square$ (0 Points)

## Congestion Management and Safety Plan IV:

The measure relies on the results on MnDOT's Congestion Management and Safety Plan IV (CMSP IV), which prioritized lower cost/high benefit, spot mobility projects on MnDOT-owned roadways. For the Regional Solicitation, only the CMSP opportunity areas on the A-minor arterial or non-freeway principal arterial systems are eligible. Principal arterial projects on the freeway system are not eligible for funding per TAB-adopted rules.

Use the final list of CMSP IV opportunity area locations as depicted in the draft 2040 Transportation Policy Plan (2018).

## RESPONSE (Select one for your project):

- Proposed at-grade project that reduces delay at a CMSP opportunity area: $\square$ (65 Points)
- Not listed as a CMSP priority location: $\square$ (0 Points)

## SCORING GUIDANCE ( 65 Points)

Due to the three four scoring methods, more than one project can score the maximum points. In order to be awarded points for this measure the proposed project itself must show some delay reduction in measure 5A. If the project does not reduce delay, then it will score 0 points for this measure.

Congestion within Project Area: The applicant with the most congestion within the project area (measured by the largest percentage decrease in peak hour travel speeds relative to free-flow conditions) will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored showed a $5 \%$ decrease of travel speeds in the peak hour relative to free flow conditions and the top project had a $10 \%$ reduction, this applicant would receive ( $5 / 10$ )*65 points, or 33 points. If the project covers more than one segment of speed data, the applicants can use the one that is most beneficial to their score.

Congestion on Adjacent Parallel Routes: The applicant with the with the most congestion on an adjacent parallel route (measured by the largest percentage decrease in peak hour travel speeds relative to freeflow conditions) will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored showed a $5 \%$ decrease of travel speeds in the peak hour on the adjacent parallel route relative to free flow conditions and the top project had a 10\% reduction, this applicant would receive (5/10)*65 points, or 33 points. Applicants can use the adjacent parallel route that is most beneficial to their score.

Principal Arterial Intersection Conversion Study: Projects will be scored based on their Principal Arterial Intersection Conversion Study priorities.

Congestion Management and Safety Plan IV: Projects will be scored based on whether their project location is in a Congestion Management and Safety Plan opportunity area.

The scorer will assess if the applicant would score highest with congestion part of the measure, congestion on adjacent parallel routes part of the measure, the Principal Arterial Intersection Conversion Study part of the measure, or the CMSP IV part of the measure and give the applicant the highest of the three-four scores out of a maximum of 65 points.

Note: Due to the use of multiple sub-sections, three-multiple applicants may receive the full 65 points.
B. MEASURE: Reference the "Regional Economy" map generated at the beginning of the application process. Report the existing employment and manufacturing/distribution-related employment, and post-secondary students enrolled within one mile, as depicted on the "Regional Economy" map.

RESPONSE (Data from the "Regional Economy" map):

- Existing Employment within 1 Mile: $\qquad$ (Maximum of 40 points)
- Existing Manufacturing/Distribution-Related Employment within 1 Mile: $\qquad$ (Maximum of 40 points)
- Existing Post-Secondary Students within 1 Mile: $\qquad$ (Maximum of 24 points)

Upload the "Regional Economy" map used for this measure.

## SCORING GUIDANCE (40 Points)

All Census block groups that are included within or intersect the buffer area around the project will be included.

The applicant with the highest existing total employment will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 1,000 workers within one mile and the top project had 1,500 workers, this applicant would receive $(1,000 / 1,500) * 40$ points or 27 points.

The applicant with the highest existing manufacturing/distribution-related employment will receive the full points. Remaining projects will receive a proportionate share of the full points equal to the existing manufacturing/distribution-related employment within one mile of the project being scored divided by the project with the highest manufacturing/distribution-related employment within one mile multiplied by the maximum points available for the measure (30). For example, if the application being scored had 1,000 manufacturing/distribution-related workers within one mile and the top project had 1,500 manufacturing/distribution-related workers, this applicant would receive (1,000/1,500)*40 points or 27 points.

The applicant with the highest number of post-secondary students will receive 30 points. Remaining projects will receive a proportionate share of the 30 points. For example, if the application being scored had 1,000 students within one mile and the top project had 1,500 students, this applicant would receive $(1,000 / 1,500) * 24$ points or 16 points.

The scorer will assess if the applicant would score highest with the total employment part of the measure, the manufacturing/distribution employment part of the measure, or the education part of the measure and give the applicant the highest of the three scores out of a maximum of 40 points.

Note: Due to the use of multiple sub-measures, two applicants can receive the full 40 points.
C. MEASURE: This criterion relies on the results on the Regional Truck Corridor Study, which prioritized all principal and minor arterials based on truck volume, truck percentage of total traffic, proximity to freight industry clusters, and proximity to regional freight terminals. ( 65 points)

Use the final study report for this measure:
https://metrocouncil.org/Transportation/Planning-2/Transit-Plans,-Studies-Reports/Highways-Roads/Truck-Freight-Corridor-Study.aspx
RESPONSE: (Select one for your project, based on the Regional Truck Corridor Study):

- Along Tier 1:
- Along Tier 2:
- Along Tier 3:
- The project provides a direct and immediate connection (i.e., intersects) with either a Tier 1, Tier 2, or Tier 3 corridor:
- None of the tiers:

## SCORING GUIDANCE (65 Points)

Applicants will be awarded points as assigned in the above tiers:

- Projects along Tier 1: 65 points
- Projects along Tier 2: 45 points
- Projects along Tier 3: 25 points
- Projects that that provide a direct and immediate connection to a corridor: 10 points.
- None of the tiers: 0 points

If no applicant is along Tier 1, the top-scoring application(s) will be adjusted to 65 points, with the others adjusted proportionately.
Note: Due to the use of tiered scoring, multiple applications can receive the full points.
2. Usage (175 Points) - This criterion quantifies the project's potential impact by measuring the current daily person throughput and future vehicular traffic that will be served by the project. These roadway users directly benefit from the project improvements on the A-minor arterial or non-freeway principal arterial.
A. MEASURE: The applicant must identify the location along the project length and provide the current AADT volume from the MnDOT 50-series maps (select Twin Cities Metro Area Street Series under Traffic Volume (AADT)) and existing transit routes that travel on the road (reference "Transit Connections" map). Ridership data will be provided by the Metropolitan Council staff, if public transit is currently provided on the project length. Metropolitan Council staff will calculate the current daily person throughput at one location along the A-minor arterial or non-freeway principal arterial project length using the current average annual daily traffic (AADT) volume and average annual ridership.

- Current Daily Person Throughput = (current average annual daily traffic volume $\times 1.30$ vehicle occupancy) + average annual daily transit ridership (20172019)

## RESPONSE:

- Location:
- Current AADT volume:
$\qquad$ Existing Transit Routes on the Project:
Upload "Transit Connections" map.

## SCORING GUIDANCE (110 Points)

The applicant with highest current daily person throughput will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily person throughput of 1,000 vehicles-people and the top project within the same functionalclassification-had a daily person throughput of 1,500 whiclespeople, this applicant would receive $(1,000 / 1,500) * 110$ points or 73 points.
B. MEASURE: Provide the forecast (2040) average daily traffic volume at the same location along the Aminor arterial or non-freeway principal arterial project length, as identified in the previous measure. The applicant may choose to use a county or city travel demand model based on the Metropolitan Council model to identify the forecast (2040) average daily traffic volume or have Metropolitan Council staff determine the forecast volume using the Metropolitan Council model and project location. Respond as appropriate to the use of one type of forecast model.

## RESPONSE:

- Use Metropolitan Council model to determine forecast (2040) ADT volume $\square$
- If checked, METC Staff will provide Forecast (2040) ADT volume $\square$

OR
RESPONSE:

- Identify the approved county or city travel demand model to determine forecast (2040) ADT volume:
- Forecast (2040) ADT volume : $\qquad$

## SCORING GUIDANCE (65 Points)

The applicant with the highest forecast (2040) ADT volume will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application

Roadway and Bridge Reconstruction/Modernization and Spot Mobility being scored had a daily forecast of 28,000 vehicles and the top project had a daily forecast of 32,000 vehicles, this applicant would receive $(28,000 / 32,000) * 65$ points or 57 points.
3. Equity and Housing Performance (100 Points) - This criterion addresses the Council's role in advancing equity by examining the project's positive and negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly along with outreach to those groups. The criterion also evaluates a community's efforts to promote affordable housing.
A. MEASURE: Reference the "Socio-Economic Conditions" map generated at the beginning of the application process. Identify the project's location from the list below, as depicted on the map. Geographic proximity alone is not sufficient to receive the full points. In order to receive the maximum points, the response should address equitable distribution of benefits, mitigation of negative impacts, and community engagement for the populations selected. ( 30 Points)

Upload the "Socio-Economic Conditions" map used for this measure.
RESPONSE (Select one, based on the "Socio-Economic Conditions" map):

- Project located in Area of Concentrated Poverty with $50 \%$ or more of residents are people of color (ACP50): $\square$ (up to $100 \%$ of maximum score)
- Project located in Area of Concentrated Poverty: $\square$ (up to $80 \%$ of maximum score)
- Project's census tracts are above the regional average for population in poverty or population of color: $\square$ (up to $60 \%$ of maximum score)
- Project located in a census tract that is below the regional average for population in poverty or populations of color, or includes children, people with disabilities, or the elderly: $\square$ (up to $40 \%$ of maximum score)

1. ( 0 to 3 points) A successful project is one that has actively engaged in low-income populations, people of color, children, persons with disabilities, and the elderly during the project's development with the intent to limit negative impacts on them and, at the same time, provide the most benefits. Describe how the project has encouraged or will engage the full cross-section of community in decision-making. Identify the communities to be engaged and where in the project development process engagement has occurred or will occur. Elements of quality engagement include: outreach to specific communities and populations that are likely to be directly impacted by the project; techniques to reach out to populations traditionally not involved in the community engagement related to transportation projects; residents or users identifying potential positive and negative elements of the project; and surveys, study recommendations, or plans that provide feedback from populations that may be impacted by the proposed project. If relevant, describe how NEPA or Title VI regulations will guide engagement activities.
(Limit 1,400 characters; approximately 200 words):
2. ( 0 to 7 points) Describe the project's benefits to low-income populations, people of color, children, people with disabilities, and the elderly. Benefits could relate to safety; public health; access to destinations; travel time; gap closure; leveraging of other beneficial projects and investments; and/or community cohesion. Note that this is not an exhaustive list.

[^5]3. (-3 to 0 points) Describe any negative externalities created by the project along with measures that will be taken to mitigate them. Negative externalities can result in a reduction in points, but mitigation of externalities can offset reductions.
(Limit 2,800 characters; approximately 400 words):

Below is a list of negative impacts. Note that this is not an exhaustive list.

- Increased difficulty in street crossing caused by increased roadway width, increased traffic speed, wider turning radii, or other elements that negatively impact pedestrian access.
- Increased noise.
- Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.
- Project elements that are detrimental to location-based air quality by increasing stop/start activity at intersections, creating vehicle idling areas, directing an increased number of vehicles to a particular point, etc.
- Increased speed and/or "cut-through" traffic.
- Removed or diminished safe bicycle access.
- Inclusion of some other barrier to access to jobs and other destinations.
- Displacement of residents and businesses.
- Construction/implementation impacts such as dust; noise; reduced access for travelers and to businesses; disruption of utilities; and eliminated street crossings. These tend to be temporary.
- Other

## SCORING GUIDANCE (30 Points)

Each application will be scored on a 10-point scale as described below.

1. (3 points): The project(s) with the most impactful and meaningful community engagement will receive the full three points. Remaining projects will receive a share of the full points at the scorer's discretion.
2. (7 points) The project(s) with the most positive benefits will receive the full seven points. Remaining projects will receive a share of the full points at the scorer's discretion.
3. ( -3 to 0 points) The scorer will reduce the score by one point (up to three total) for each negative externality. Note that the scorer can deduct points for negatives not acknowledged in the application; the scorer will document any negatives not acknowledged in the application and the reasons for any associated point reductions. The scorer can add one to three points for successful mitigation of negative project elements based on the degree to which they are mitigated. Note that this score cannot provide more points than are deducted.
Each score from the above 10-point scale will then be adjusted to the appropriate geography.
Note: Due to the geographic adjustment to scores, it is possible that the above process will result in no project receiving the maximum allotment of points. In this case, the highest-scoring application for this measure will be adjusted to receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 10 points and the top project had 20 points, this applicant would receive $(10 / 20) * 30$ points or 15 points. Note also that it is possible to score negative points on this measure.

## Roadway and Bridge Reconstruction/Modernization and Spot Mobility

B. MEASURE: Metropolitan Council staff will award points to the project based on the 20172019 Housing Performance Score for the city or township in which the project is located. The score includes consideration of affordability and diversification, local initiatives to facilitate affordable workforce housing development or preservation, and density of residential development. If the project is in more than one jurisdiction, the points will be awarded based on a weighted average using the length or population of the project in each jurisdiction.

For stand-alone intersection, bridge, underpass, and interchange projects, a one-mile radius-buffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

## RESPONSE:

- City/Township:
- Length of Segment (For stand-alone projects, enter population from Regional Economy map) within each City/Township: $\qquad$
- Housing Score: $\qquad$ (online calculation)

## SCORING GUIDANCE (70 Points)

The applicant with the highest Z017 2019 Housing Performance Score will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a Housing Performance Score of 55 and the top project had a Housing Performance Score of 90, this applicant would receive $(55 / 90) * 70$ points or 43 points.

Note: Metropolitan Council staff will score this measure.
Projects will use the city Housing Performance Score based on the project location. If a project is located in more than one jurisdiction, the points will be awarded based on a weighted average of the city or township scores for the project location based on the length of the project in each jurisdiction. For stand-alone intersection, bridge, underpass, and interchange projects, a one-mile radius-buffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

If this is the case, then the total points possible in the application will be 930 instead of 1,000 . The total points awarded through the rest of the application ( 900 as a hypothetical example) will be divided by 930 , then multiplied by 1,000 . Therefore, a project scoring 900 out of 930 , will equate to 968 points on a 1,000point scale.

If a portion of the project is located in a city with an affordable housing allocation and the other portion is located in a township with no affordable housing allocation, then a combination of the weighted average and no affordable housing methodologies should be used. This will result in a total score that will be somewhere between 930 and 1,000; then the score will need to be adjusted to fit a 1,000-point scale.
4. Infrastructure Age/Condition (150 Points) - This criterion will assess the age of the roadway or bridge facility being improved. Roadway improvement investments should focus on the higher needs of an aging facility, whereas, improvements to a recently reconstructed roadway does not display an efficient use of funds. For bridge projects, the scoring will focus on the bridge sufficiency rating. If there are two separate spans, then the applicant should take the average bridge sufficiency rating of the two spans.
A. MEASURE: Identify the year of the roadway's original construction or most recent reconstruction. If the reconstruction date is used for the roadway, a full reconstruction must have been completed during the indicated year. Routine maintenance, such as an overlay or sealcoating project does not constitute a reconstruction and should not be used to determine the infrastructure age.

If construction was completed over several years, enter the segment lengths for each year. The average age will be calculated.
In order to enter information, click "Add' (in the upper right-hand corner of the page), enter the year and click "Save". If the project length has more than one construction year, repeat the "Add" and "Save" process for each segment.

## RESPONSE:

- Year of original roadway construction or most recent reconstruction: $\qquad$
- Location(s) used:

## SCORING GUIDANCE (50 Points)

The applicant with the oldest roadway will receive full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored was constructed 41 years ago and the oldest project was constructed 48 years ago, this applicant would receive (41/48)*50 points or 43 points.

Note: Because of the reporting of year of construction, it is possible for multiple projects to receive the full allotment of 50 points.
B. MEASURE: For roadway projects, describe Select the geometric, structural, or infrastructure deficiencies listed below that will be improved as part of this project, as reflected in the project cost estimate. For bridge projects, identify the bridge sufficiency rating, from the most recent Structure Inventory Report. Attach the report to the application. (100 Points)

## Roadway Projects:

RESPONSE (Select all that apply. Please identify the proposed improvement):

- Improved roadway to better accommodate freight movements: $\square 0-15$ pts o RESPONSE (Limit 700 characters; approximately 100 words):
- Improved clear zones or sight lines: $\square 0-10$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)
- Improved roadway geometrics: $\square 0-15$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)
- Access management enhancements: $\square 0-20$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)
- Vertical/horizontal alignment improvements: $\square 0-10$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)
- Improved stormwater mitigation: $\square 0-10 \mathrm{pts}$
o RESPONSE (Limit 700 characters; approximately 100 words)
- Signals/lighting upgrades: $\square 0-10$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)
- Other Improvements: $\square 0-10$ pts
o RESPONSE (Limit 700 characters; approximately 100 words)

Bridge Projects:

- Bridge Sufficiency Rating:

Upload Structure Inventory Report.

## SCORING GUIDANCE (100 Points)

This measure will be considered separately for roadway and bridge projects. As a result, two projects may receive the full points.

For roadway projects, within each improvement sub-measure, the answer most responsive to the need will receive full points (e.g., the top project that improves clear zones or sight lines will receive 10 points), with each remaining project receiving a share of the full points at the scorer's discretion. It is possible for more than one project to receive maximum points for a sub-measure.

The highest-scoring application for this measure will be adjusted to receive the full 100 points. Remaining projects will receive a proportionate share of the full points equal to the points for the project being scored divided by the points assigned to the highest-scoring project multiplied by the maximum points available for the measure (100). For example, if the application being scored had 25 points and the top project had 50 points, this applicant would receive $(25 / 50) * 100$ points or 50 points.

For bridge projects, the applicant with the lowest bridge sufficiency rating will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points equal to the rating for the project with the lowest bridge sufficiency rating divided by the project being scored multiplied by the maximum points available for the measure (100). For example, if the top project had a bridge sufficiency rating of 35 and the application being scored had a score of 55 , this applicant would receive $(35 / 55) * 100$ points or 60 points.
5. Congestion Reduction/Air Quality ( 80 Points) - This criterion measures the project's ability to reduce congestion. In addition, it will address its ability to improve congested intersections operating at unacceptable levels of service during peak hour conditions. The project will also be measured based on its ability to reduce emissions.
A. MEASURE: Conduct a capacity analysis at one or more of the intersections (or rail crossings) being improved by the roadway project using existing turning movement counts (collected within the last three years) in the weekday a.m. or p.m. peak hour and the Synchro or HCM software. The applicant must show the current total peak hour delay at one or more intersections (or rail crossings) and the reduction in total peak hour intersection delay at these intersections (or rail crossings) in seconds due to the project. If more than one intersection (or rail crossing) is examined, then the delay reduced by each intersection can be can added together to determine the total delay reduced by the project.

- For roadway projects that include a railroad crossing, the applicant should conduct fieldwork during either the weekday a.m. or p.m. peak hour to determine the total peak hour delay reduced by the project. Applicants can also add together intersection delay reduced and railroad delay reduced, if they both will be improved by the project.

The applicant should include the appropriate Synchro or HCM full reports (including the Timing Page Report) that support the improvement in total peak hour delay and should conduct the analysis using the following:

- Under the network settings, all defaults should be used for lanes, saturation flow rates, volumes, and simulation
- Use Synchro's automatic optimization to determine cycle, offset and splits (for traffic signals). Use the setting when assessing delay both with and without the project. This methodology will ensure that all applicants start with their signal systems optimized when determining existing delay.
- Project improvements assumed in the build condition should be reflected in the total project cost, such as additional through or turn lanes and protective left-turn phasing
- Roadway lengths for intersection approaches must be the same length for before and after scenarios
- An average weekday should be used for the existing conditions instead of a weekend, peak holiday, or special event time period that is not representative of the corridor for most of the year
Total Peak Hour Delay Reduced (Seconds) = Total Peak Hour Delay/Vehicle x Vehicles Per Hour

## RESPONSE):

- Total Peak Hour Delay/Vehicle without the Project (Seconds/Vehicle):
- Total Peak Hour Delay/Vehicle with the Project (Seconds/Vehicle):
- Total Peak Hour Delay/Vehicle Reduced by the Project (Seconds/Vehicle): (automatically calculated)
- Volume (Vehicles Per Hour):
- Total Peak Hour Delay Reduced by the Project (Seconds): $\qquad$ (automatically calculated)

EXPLANATION of methodology used to calculate railroad crossing delay, if applicable (Limit 1,400 characters; approximately 200 words):

## SCORING GUIDANCE (50 Points)

The applicant with the most peak hour vehicle delay reduced by the project improvement will receive the full points for the measure. Remaining projects will receive a proportionate share of the points. For example, if the application being scored reduced delay by 5,000 seconds and the top project reduced delay by 25,000 seconds, this applicant would receive $(5,000 / 25,000) * 50$ points, or 10 points.
B. MEASURE: Using the Synchro or HCM analysis completed in the previous measure, identify the total peak hour emissions reduction in kilograms (CO, NOx, VOC) due to the project. The applicant should include the appropriate Synchro or full HCM reports (including the Timing Page Report) that support the improvement in total peak hour emissions. If more than one intersection is examined, then the emissions reduced by each intersection can be can added together to determine the total emissions reduced by the project.

## Roadway projects that do not include railroad grade-separation elements:

- Total Peak Hour Emissions Reduced (Kilograms)= Total Peak Hour Emissions without the project Total Peak Hour Emissions with the Project

## RESPONSE:

- Total (CO, NO ${ }_{\mathrm{x}}$, and VOC) Peak Hour Emissions without the Project (Kilograms): $\qquad$
- Total (CO, NO ${ }_{x}$, and VOC) Peak Hour Emissions with the Project (Kilograms):
- Total (CO, NOx and VOC) Peak Hour Emissions Reduced by the Project (Kilograms): (calculated online)

If more than one intersection is examined, the response should include a total of all emissions reduced.

## Roadway projects that include railroad grade-separation elements:

- For roadway projects that include a railroad crossing, the applicant needs to input four variables before and after the project to determine the change in emissions. Those variables include: speed, vehicle mile traveled, delay, and total vehicle stops. The applicant needs to conduct fieldwork during either the a.m. or p.m. peak hour to determine the existing conditions and then detail any assumptions used for conditions after the project is built. The variables will be used in the exact same equation used within the software program (i.e., Synchro) required of the other project types. Therefore, the approach to calculate the kilograms emissions reduced for railroad gradeseparation projects will be comparable to intersection improvement projects.

## RESPONSE:

- Cruise speed in miles per hour without the project: $\qquad$ (Applicant inputs number)
- Vehicle miles traveled without the project: $\qquad$ (Applicant inputs number)
- Total delay in hours without the project: $\qquad$ (Applicant inputs number)
- Total stops in vehicles per hour without the project: $\qquad$ (Applicant inputs number)
- Cruise speed in miles per hour with the project: $\qquad$ (Applicant inputs number)
- Vehicle miles traveled with the project: $\qquad$ (Applicant inputs number)
- Total delay in hours with the project: $\qquad$ (Applicant inputs number)
- Total stops in vehicles per hour with the project: $\qquad$ (Applicant inputs number)
- Fuel consumption in gallons (F1)
- Fuel consumption in gallons (
- Fuel consumption in gallons (F3)

```
Speed = cruise speed in miles per hour
```

Total Travel = vehicle miles traveled
Total Delay = total delay in hours
Stops = total stops in vehicles per hour
K1 $=0.075283-0.0015892 *$ Speed $+0.000015066 *$ Speed $^{2}$
$K 2=0.7329$
$K 3=0.0000061411 *$ Speed $^{2}$
F1 (or F2 - without the project) = Fuel consumption in gallons
F1 = Total Travel * k1 + Total Delay * k2 + Stops * k3
F2 $=$ Total Travel * k1 + Total Delay * k2 + Stops * k3
F3 $=$ F1 - F2
$C O=F 3 * 0.0699 \mathrm{~kg} /$ gallon
$\mathrm{NO}_{\mathrm{x}}=F 3 * 0.0136 \mathrm{~kg} / \mathrm{gallon}$
$V O C=F 3 * 0.0162 \mathrm{~kg} / \mathrm{gallon}$

Equation Automatically Provides Emissions Reduced:

- Total (CO, NOx, and VOC) Peak Hour Emissions Reduced by the Project (Kilograms):
$\qquad$ (Online Calculation)

EXPLANATION of methodology and assumptions used (Limit 1,400 characters; approximately 200 words):

## SCORING GUIDANCE ( 30 Points)

The applicant with the most kilograms reduced by the project improvement will receive the full points for the measure. Remaining projects will receive a proportionate share of the full. For example, if the application being scored reduced emissions by 3 kilograms and the top project reduced emissions by 5 kilograms, this applicant would receive (3/5)*30 points or 18 points.
6. Safety (150 Points) - This criterion addresses the project's ability to correct deficiencies and improve the overall safety of a roadway facility. It will assess the project's monetized safety benefits.
A. MEASURE: Respond as appropriate to one of the two project types below. (150 Points)

## Roadway projects that do not include railroad grade-separation elements:

Calculate the reduction in the total number of crashes due to improvements on the A-minor arterial or non-freeway principal arterial made by the project. The applicant must base the estimate of crash reduction on the methodology consistent with the latest Highway Safety Improvement Program (HSIP) application (www.dot.state.mn.us/stateaid/trafficsafety.html). Applicants should focus on the crash analysis for reactive projects.

Crash data must be obtained for the project length using the MnDOT TIS system average for calendar years 2013-2017 through 20159. Crash data should include all crash types and severities, including pedestrian and bicycle crashes.

Applicants should request crash data from MnDOT as early as possible. The applicant must then attach a listing of the crashes reduced and the HSIP Benefit/Cost (B/C) worksheet (www.dot.state.mn.us/stateaid/trafficsafety.html) that identifies the resulting benefit associated with the project. As part of the response, please detail and attach the crash modification factor(s) used from FHWA's Crash Modification Factors Clearinghouse: http://www.cmfclearinghouse.org/. This measure requests the monetized safety benefit of the project. The cost of the project is scored in the Cost Effectiveness criterion.

## RESPONSE:

- Crash Modification Factors Used (Limit 700 characters; approximately 100 words):
- Rationale for Crash Modifications Selected (Limit 1,400 characters; approximately 200 words):
- Project Benefit (\$) from $B / C$ ratio:
- Explanation of Methodology:

## Roadway projects that include railroad grade-separation elements:

Since the number of observed crashes at an existing at-grade railroad crossing is minor compared to an intersection, this measure will assess crash risk exposure that exists in order to compare projects. As a proactive safety measure, railroad grade-separation projects eliminate the crash risk exposure.

- Crash Risk Exposure Eliminated = current average annual daily traffic volume x average number of daily trains at the at-grade crossing

## RESPONSE:

- Current AADT volume:
- Average daily trains:
$\qquad$
- Crash Risk Exposure eliminated:

## SCORING GUIDANCE (150 Points)

This measure will be considered separately for projects that do and do not include a railroad gradeseparation project. As a result, two projects (one without a railroad grade-separation project and one with a railroad grade-separation) may receive the full points.

For projects that do not include a grade-separation project, the applicant with the highest dollar value of benefits will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had safety benefits of $\$ 11,000,000$
and the top project had safety benefits of $\$ 16,000,000$, this applicant would receive $(11,000,000 / 16,000,000) * 150$ points or 103 points.

For railroad grade-separation projects, the applicant with the highest crash risk exposure eliminated due to the project will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored reduced 11,000 exposures and the top project reduced 16,000 , this applicant would receive ( $11,000 / 16,000$ )*150 points or 103 points.
7. Multimodal Elements and Existing Connections (100 Points) - This criterion measures how the project improves the travel experience, safety, and security for other modes of transportation and addresses the safe integration of these modes. The Transportation Policy Plan requires that explicit consideration of all users of the transportation system be considered in the planning and scoping phase of roadway projects.
A. MEASURE: Describe how the project positively affects the multimodal system.

- Discuss any bicycle, pedestrian, or transit elements that are included as part of the project and how they improve the travel experience, safety, and security for users of these modes. Applicants should make sure that new multimodal elements described in the response are accounted for as part of the cost estimate form earlier in the application. Applicants should note if there is no transit service in the project area and identify supporting studies or plans that address why a mode may not be incorporated in the project (e.g., a bicycle system plan that locates bikeway facilities on a lower-volume parallel route).
- Describe how the proposed multimodal improvements positively affect identified alignments in the Regional Bicycle Transportation Network (RBTN) or along a regional trail, if applicable.
- Describe how the proposed multimodal improvements either provide a new, or improve an existing a Major River Bicycle Barrier Crossing (MRBBC) as defined in the 2040 Transportation Policy Plan (TPP) or an identified Regional Bicycle Barrier Improvement Area as defined in the TPP and Technical Addendum to the Regional Bicycle Barriers Study (May 2019), if applicable.
- Discuss the existing bicycle, pedestrian, and transit connections and how the project enhances these connections.
- Discuss whether the project implements specific locations identified as being deficient in a completed ADA Transition Plan.

## RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (100 Points)

The project that most positively affects the multimodal elements system will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion. The project score will be based on the quality of the improvements, as opposed to being based solely on the number of modes addressed. Points can be earned for incorporating multimodal project elements, positively affecting identified alignments in the Regional Bicycle Transportation Network (RBTN), orregional trail, Major River Bicycle Barrier Crossing, or Regional Bicycle Barrier, or for making connections with existing multimodal systems or helping to implement an ADA Transition Plan. Multimodal elements for rural roadway projects may include wider shoulders that will be used by bicyclists and pedestrians.
Scorers should make sure that new multimodal elements described in the response are accounted for on the cost estimate form earlier in the application.
8. Risk Assessment ( 75 Points) - This criterion measures the number of risks associated with successfully building the project. High-risk applications increase the likelihood that projects will withdraw at a later date. If this happens, the region is forced to reallocate the federal funds in a short amount of time or return them to the US Department of Transportation. These risks are outlined in the checklist in the required Risk Assessment.
A. MEASURE: Applications involving construction must complete the Risk Assessment. This checklist includes activities completed to-date, as well as an assessment of risks (e.g., right-of-way acquisition, proximity to historic properties, etc.).

## RESPONSE (Complete Risk Assessment):

Please check those that apply and fill in anticipated completion dates for all projects, except for new/expanded transit service projects or transit vehicle purchases.

## 1) Layout ( 30 Percent of Points)

Layout should include proposed geometrics and existing and proposed right-of-way boundaries
$100 \% \square$ Layout approved by the applicant and all impacted jurisdictions (i.e., cities/counties that the project goes through or agencies that maintain the roadway(s)). A PDF of the layout must be attached along with letters from each jurisdiction to receive points.
$50 \% \quad \square$ Layout completed but not approved by all jurisdictions. A PDF of the layout must be attached to receive points.
$0 \% \quad \square$ Layout has not been started
Anticipated date or date of completion: $\qquad$
2) Review of Section 106 Historic Resources ( $\mathbf{2 0}$ Percent of Points)
$100 \% \square$ No known historic properties eligible for or listed in the National Register of Historic Places are located in the project area, and project is not located on an identified historic bridge
$100 \% \square$ There are historical/archeological properties present but determination of "no historic properties affected" is anticipated.
80\% $\square$ Historic/archeological property impacted; determination of "no adverse effect" anticipated
40\% $\square$ Historic/archeological property impacted; determination of "adverse effect" anticipated
$0 \% \quad \square$ Unsure if there are any historic/archaeological properties in the project area.
Project is located on an identified historic bridge:
3) Right-of-Way (30 Percent of Points)
$100 \% \square$ Right-of-way, permanent or temporary easements either not required or all have been acquired
50\% $\square$ Right-of-way, permanent or temporary easements required, plat, legal descriptions, or official map complete
25\% $\square$ Right-of-way, permanent or temporary easements required, parcels identified
0\% $\quad \square$ Right-of-way, permanent or temporary easements required, parcels not all identified
Anticipated date or date of acquisition $\qquad$

## 4) Railroad Involvement ( 20 Percent of Points)

$100 \% \square$ No railroad involvement on project or railroad Right-of-Way agreement is executed
(include signature page, if applicable)
50\% $\square$ Railroad Right-of-Way Agreement required; negotiations have begun
0\% $\quad \square$ Railroad Right-of-Way Agreement required; negotiations have not begun.
Anticipated date or date of executed Agreement $\qquad$

## SCORING GUIDANCE (75 Points)

The applicant with the most points on the Risk Assessment (more points equate to less project risk) will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 40 points and the top project had 70 points, this applicant would receive $(40 / 70) * 75$ points or 43 points.
9. Cost Effectiveness (100 Points) - This criterion will assess the project's cost effectiveness or ability to leverage outside funding sources based on the totalTAB-eligible project cost (not including noise walls) and total points awarded in the previous criteria.
A. MEASURE:

## Cost Effectiveness:

This measure will calculate the cost effectiveness of the project. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the TAB-eligible project cost (not including noise walls).

- Cost- effectiveness = total number of points awarded in previous criteria/total TAB-eligible project cost

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Project Cost (entered in Project Cost Form): $\qquad$ (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: $\qquad$ (entered by Metropolitan Council staff)

## Leveraging Outside Funding Sources:

This measure will calculate the cost effectiveness of the project and how well the project leverages outside funding sources. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the requested award (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/requested award (not including noise walls)

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Award Request: (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: (entered by Metropolitan Council staff)

# Roadway and Bridge Reconstruction/Modernization and Spot Mobility 

## SCORING GUIDANCE (100 Points)

Due to the two scoring methods, more than one project can score the maximum points
Cost Effectiveness: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive $(.0005 / .00025) * 100$ points for 50 points.

Leveraging Outside Funding Sources: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

The scorer for this measure will also complete a reasonableness check of the total project cost that is used for this measure. The scorer may follow up with the applicant to clarify any questions. Up to 50 percent of points awarded for this measure can be deducted if the scorer does not believe that the cost estimate is reasonable.

The scorer will assess if the applicant would score highest with the cost effectiveness part of the measure or the leveraging of outside funding sources part of the measure and give the applicant the highest of the two scores out of a maximum of 100 points.
Note: Due to the use of multiple sub-sections, multiple applicants may receive the full 100 points.

## TOTAL: 1,100 POINTS

## Traffic Management Technologies (Roadway System Management) - Prioritizing Criteria and Measures

April 15, 2019
Definition: An Intelligent Transportation System (ITS) or similar project that primarily benefits roadway users. Traffic Management Technology are described under Regional Mobility in the TPP and projects can include project elements along a single corridor, multiple corridors, or within a specific geographic area such as a downtown area. To be eligible, projects must make improvements to at least one A-minor arterial or non-freeway principal arterial. Projects that are more transit-focused must apply in the Transit Modernization application category.

## Examples of Traffic Management Technology Projects:

- Flashing yellow arrow traffic signals
- Traffic signal retiming projects
- Integrated corridor signal coordination
- Traffic signal control system upgrades
- New/replacement detectors
- Passive detectors for bicyclists and pedestrians
- New/replacement traffic mgmt. centers
- New/replacement traffic communication
- New/replacement CCTV cameras
- New/replacement variable message signs \& other info improvements
- Incident management coordination

## Scoring:

| Criteria and Measures | Points | $\%$ of Total <br> Points |
| :--- | :---: | :---: |
| 1. Role in the Regional Transportation System and Economy | $\mathbf{1 7 5}$ | $\mathbf{1 6 \%}$ |
| Measure A - Functional classification of project | 50 |  |
| Measure B - Regional Truck Corridor Study Tiers | 50 |  |
| Measure C - Integration within existing traffic management systems | 50 |  |
| Measure D - Coordination with other agencies | 25 |  |
| 2. Usage | $\mathbf{1 2 5}$ | $\mathbf{1 1 \%}$ |
| Measure A - Current daily person throughput | 85 |  |
| Measure B - Forecast 2040 average daily traffic volume | 40 |  |
| 3. Equity and Housing Performance | $\mathbf{1 0 0}$ | $\mathbf{9 \%}$ |
| Measure A - Connection to disadvantaged populations and project's benefits | $\mathbf{3 0}$ |  |
| Measure B - Housing Performance Score | $\mathbf{7 0}$ |  |
| 4. Infrastructure Age | $\mathbf{7 5}$ | $\mathbf{7 \%}$ |
| Measure A - Upgrades to obsolete equipment | $\mathbf{7 5}$ |  |
| 5. Congestion Reduction/Air Quality | $\mathbf{2 0 0}$ | $\mathbf{1 8 \%}$ |
| Measure A - Congested roadwayCongestion Management Process | $\mathbf{1 5 0}$ |  |
| Measure B - Emissions and congestion benefits of project | 50 |  |
| 6. Safety | $\mathbf{2 0 0}$ | $\mathbf{1 8 \%}$ |
| Measure A - Crashes reduced | 50 |  |
| Measure B - Safety issues in project area | 150 |  |
| 7. Multimodal Elements and Existing Connections | $\mathbf{5 0}$ | $\mathbf{5 \%}$ |
| Measure A - Transit, bicycle, or pedestrian project elements and connections | 50 |  |
| 8. Risk Assessment | $\mathbf{7 5}$ | $\mathbf{7 \%}$ |
| Measure A- Risk Assessment Form | $\mathbf{7 5}$ |  |
| 9. Cost Effectiveness | $\mathbf{1 0 0}$ | $\mathbf{9 \%}$ |

## Points

\% of Total Points
Measure A - Cost effectiveness (total points awarded/ total project cost) or leveraging other resources (total points awarded/award requested)
Total $\mathbf{1 , 1 0 0}$

1. Role in the Regional Transportation System and Economy (175 Points) - Tying regional policy (Thrive MSP2040) to the Regional Solicitation, this criterion measures the project's ability to serve a transportation purpose within the regional transportation system and economy based on how well it fulfills its functional classification role, aligns with the Regional Truck Corridor Study, and integrates with existing traffic management systems, and provides coordination across agencies. The project must be located on at least one non-freeway principal arterial or A-minor arterial.
A. MEASURE: Reference the functional classification(s) that the project would serve. Investment in a higher functionally-classified roadway (i.e., the principal arterial system) serves a more regional purpose and will result in more points.

## RESPONSE (Select one):

- The majority of the project funds will be invested on the principal arterial system: $\square$ ( 50 points)
- The majority of the project funds will be invested on the A-minor arterial system: $\square$ (25 points)
- The majority of the project funds will be invested on the collector or local system with some investment either on the principal arterial or A-minor arterial system: $\square$ (0 points)

## SCORING GUIDANCE (50 Points)

The scorer will assign points based on which of the above scores applies. Note that multiple applicants are able to score the maximum point allotment. If no applicant scores 50 points, the 25 -point projects will be adjusted to 50 points, while the zero-point projects will remain at zero.
B. MEASURE: This criterion relies on the results of the Regional Truck Corridor Study, which prioritized all principal and minor arterials based on truck volume, truck percentage of total traffic, proximity to freight industry clusters, and proximity to regional freight terminals. (50 points)

Use the final study report for this measure:
https://metrocouncil.org/Transportation/Planning-2/Transit-Plans,-Studies-Reports/Highways-
Roads/Truck-Freight-Corridor-Study.aspx
RESPONSE (Select one for your project, based on the Regional Truck Corridor Study):

- The majority of the project funds will be invested on either a Tier 1, Tier 2, or Tier 3 corridor: (50 Points)
- A majority of the project funds will NOT be invested on a Tier 1, Tier 2, or Tier 3 corridor, but at least 10 percent of the funds will be invested on these corridors: $\square$ ( 25 Points)
- No project funds will be invested on a Tier 1, Tier 2, or Tier 3 corridor: $\square$ (0 Points)

## SCORING GUIDANCE (50 Points)

The scorer will assign points based on which of the scores applies. Note that multiple applicants can score the maximum point allotment. If no applicant scores 50 points, the 25 -point projects will be adjusted to 50 points, while the zero-point projects will remain at zero.
C. MEASURE: Discuss how the proposed project integrates and/or builds on existing traffic management infrastructure (examples of systems include traffic signal systems, freeway management systems, and incident management systems). (50 Points)

RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (50 Points)

The applicant will describe how the project would build on other infrastructure and management systems. Prioritizing projects that complement existing infrastructure and management methods, the scorer will award the full share of points to the project that best builds on other infrastructure and management systems. Remaining projects will receive a share of the full points at the scorer's discretion. This response is intended to be qualitative.
D. MEASURE: Demonstrate how the project provides or enhances coordination among operational and management systems and/or jurisdictions. (25 points)

RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (25 Points)

The project that best provides or enhances coordination among operational and management systems and/or jurisdictions will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion.
2. Usage (125 Points) - This criterion quantifies the project's potential impact by measuring the current daily person throughput and future vehicular traffic that will be served by the project. These roadway users directly benefit from the project improvements.
A. MEASURE: Metropolitan Council staff will calculate the current daily person throughput at one location along the A-minor arterial or non-freeway principal arterial project length using the current average annual daily traffic (AADT) volume and average daily transit ridership. If more than one corridor or location is included in the project, then the applicant should select the corridor where the most investment is being made with the project. The applicant must identify the location along the project length and provide the current AADT volume from the MnDOT 50-series maps. Reference the "Transit Connections" map for transit routes along the project. Ridership data will be provided by the Metropolitan Council staff, if public transit is currently provided on the project length. (85 points)

- Current Daily Person Throughput = (current average annual daily traffic volume $\times 1.30$ vehicle occupancy) + average annual daily transit ridership (20197)

## RESPONSE:

- Location:
- Current AADT volume:
- Existing transit routes at the location noted above: $\qquad$

Upload the "Transit Connections" map.

## SCORING GUIDANCE (85 Points)

[^6]B. MEASURE: Provide the forecast (2040) average daily traffic volume at the same location along the Aminor arterial or non-freeway principal arterial project length, as identified in the previous measure. The applicant may choose to use a county or city travel demand model based on the Metropolitan Council model to identify the forecast (2040) average daily traffic volume or have Metropolitan Council staff determine the forecast volume using the Metropolitan Council model and project location. Respond as appropriate to the use of one type of forecast model. ( 40 points)

## RESPONSE:

- Use Metropolitan Council model to determine forecast (2040) ADT volume $\square$
- If checked, METC Staff will provide Forecast (2040) ADT volume $\square$

OR
RESPONSE:

- Identify the approved county or city travel demand model to determine forecast (2040) ADT volume $\square$
- Forecast (2040) ADT volume:

## SCORING GUIDANCE (40 Points)

The applicant with the highest forecast (2040) ADT volume will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily forecast of 28,000 vehicles and the top project had a daily forecast of 32,000 vehicles, this applicant would receive $(28,000 / 32,000) * 40$ points or 35 points.
3. Equity and Housing Performance (100 Points) - This criterion addresses the Council's role in advancing equity by examining the project's positive and negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly along with outreach to those groups. The criterion also evaluates a community's efforts to promote affordable housing.
A. MEASURE: Reference the "Socio-Economic Conditions" map generated at the beginning of the application process. Identify the project's location from the list below, as depicted on the map. Geographic proximity alone is not sufficient to receive the full points. In order to receive the maximum points, the response should address equitable distribution of benefits, mitigation of negative impacts, and community engagement for the populations selected. (30 Points)

Upload the "Socio-Economic Conditions" map used for this measure.

## RESPONSE (Select one, based on the "Socio-Economic Conditions" map):

- Project located in Area of Concentrated Poverty with 50\% or more of residents are people of color (ACP50): $\square$ (up to 100\% of maximum score)
- Project located in Area of Concentrated Poverty: $\square$ (up to $80 \%$ of maximum score)
- Project's census tracts are above the regional average for population in poverty or population of color: $\square$ (up to $60 \%$ of maximum score)
- Project located in a census tract that is below the regional average for population in poverty or populations of color, or includes children, people with disabilities, or the elderly: $\square$ (up to $40 \%$ of maximum score)

1. ( 0 to 3 points) A successful project is one that has actively engaged in low-income populations, people of color, children, persons with disabilities, and the elderly during the project's development with the intent to limit negative impacts on them and, at the same time, provide
the most benefits. Describe how the project has encouraged or will engage the full cross-section of community in decision-making. Identify the communities to be engaged and where in the project development process engagement has occurred or will occur. Elements of quality engagement include: outreach to specific communities and populations that are likely to be directly impacted by the project; techniques to reach out to populations traditionally not involved in the community engagement related to transportation projects; residents or users identifying potential positive and negative elements of the project; and surveys, study recommendations, or plans that provide feedback from populations that may be impacted by the proposed project. If relevant, describe how NEPA or Title VI regulations will guide engagement activities.

## (Limit 1,400 characters; approximately 200 words):

2. ( 0 to 7 points) Describe the project's benefits to low-income populations, people of color, children, people with disabilities, and the elderly. Benefits could relate to safety; public health; access to destinations; travel time; gap closure; leveraging of other beneficial projects and investments; and/or community cohesion. Note that this is not an exhaustive list.

$$
\text { (Limit 2,800 characters; approximately } 400 \text { words): }
$$

3. ( -3 to 0 points) Describe any negative externalities created by the project along with measures that will be taken to mitigate them. Negative externalities can result in a reduction in points, but mitigation of externalities can offset reductions.
(Limit 2,800 characters; approximately 400 words):

Below is a list of negative impacts. Note that this is not an exhaustive list.

- Increased difficulty in street crossing caused by increased roadway width, increased traffic speed, wider turning radii, or other elements that negatively impact pedestrian access.
- Increased noise.
- Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.
- Project elements that are detrimental to location-based air quality by increasing stop/start activity at intersections, creating vehicle idling areas, directing an increased number of vehicles to a particular point, etc.
- Increased speed and/or "cut-through" traffic.
- Removed or diminished safe bicycle access.
- Inclusion of some other barrier to access to jobs and other destinations.
- Displacement of residents and businesses.
- Construction/implementation impacts such as dust; noise; reduced access for travelers and to businesses; disruption of utilities; and eliminated street crossings. These tend to be temporary.
- Other

## SCORING GUIDANCE (30 Points)

Each application will be scored on a 10-point scale as described below.

1. (3 points): The project(s) with the most impactful and meaningful community engagement will receive the full three points. Remaining projects will receive a share of the full points at the scorer's discretion.
2. (7 points) The project(s) with the most positive benefits will receive the full seven points. Remaining projects will receive a share of the full points at the scorer's discretion.
3. ( -3 to 0 points) The scorer will reduce the score by one point (up to three total) for each negative externality. Note that the scorer can deduct points for negatives not acknowledged in the application; the scorer will document any negatives not acknowledged in the application and the reasons for any associated point reductions. The scorer can add one to three points for successful mitigation of negative project elements based on the degree to which they are mitigated. Note that this score cannot provide more points than are deducted.
Each score from the above 10 -point scale will then be adjusted to the appropriate geography.
Note: Due to the geographic adjustment to scores, it is possible that the above process will result in no project receiving the maximum allotment of points. In this case, the highest-scoring application for this measure will be adjusted to receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 10 points and the top project had 20 points, this applicant would receive $(10 / 20) * 30$ points or 15 points. Note also that it is possible to score negative points on this measure.
B. MEASURE: Metropolitan Council staff will award points to the project based on the 20172019 Housing Performance Score for the city or township in which the project is located. The score includes consideration of affordability and diversification, local initiatives to facilitate affordable workforce housing development or preservation, and density of residential development. If the project is in more than one jurisdiction, the points will be awarded based on a weighted average using the percent of total funds to be spent in each jurisdiction.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted during scoring as a result.

## RESPONSE:

- City/Township:
- Funds to be spent within each City/Township:
- Percent of total funds to be spent within City/Township: (online calculation)

## SCORING GUIDANCE (70 Points)

The applicant with the highest 2017-2019 Housing Performance Score will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a Housing Performance Score of 55 and the top project had a Housing Performance Score of 90 , this applicant would receive ( $55 / 90$ )*70 points or 43 points.

Note: Metropolitan Council staff will score this measure.
Projects will use the city Housing Performance Score based on the project location. If a project is located in more than one jurisdiction, the points will be awarded based on a weighted average of the city or township scores for the project location based on the length of the project in each jurisdiction. For stand-alone roadway (intersection, bridge, underpass, and interchange) projects, a one-mile radiusbuffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.

If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

If this is the case, then the total points possible in the application will be 930 instead of 1,000 . The total points awarded through the rest of the application ( 900 as a hypothetical example) will be divided by 930 , then multiplied by 1,000 . Therefore, a project scoring 900 out of 930 , will equate to 968 points on a 1,000-point scale.

If a portion of the project is located in a city with an affordable housing allocation and the other portion is located in a township with no affordable housing allocation, then a combination of the weighted average and no affordable housing methodologies should be used. This will result in a total score that will be somewhere between 930 and 1,000; then the score will need to be adjusted to fit a 1,000-point scale.
4. Infrastructure Age (75 Points) - This criterion will assess the degree to which functionally obsolete infrastructure elements are being replaced and improved.
A. MEASURE: Describe how various equipment will be improved or replaced as part of this project relative to its age and whether it is functionally obsolete.

RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (75 Points)

The project that best provides for stewardship of public funds and resource by replacing functionally obsolete equipment and finding cost-effective solutions to upgrade viable equipment will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion.
5. Congestion Reduction/Air Quality (200 Points) - This criterion measures the project's ability to make improvements in congested corridors using speed data from the Congestion Management Process Plan. The project will also be measured based on its ability to reduce emissions.
A. MEASURE: Council staff will provide travel speed data to compare the peak hour travel speed in the project area to free flow conditions on the "Level of Congestion" map. If more than one corridor or location is included in the project, then the applicant should select the corridor on which the most investment is being made with the project. The applicant must identify the corridor as part of the response. It is anticipated that the Congestion Management Process Plan will be further incorporated into the Regional Solicitation as part of the 2022 Regional Solicitation funding cycle. (150 Points)

## RESPONSE:

- Corridor: $\qquad$
- Corridor Start and End Points: $\qquad$
- Free-Flow Travel Speed: $\qquad$
- Peak Hour Travel Speed: $\qquad$
- Percentage Decrease in Travel Speed in Peak Hour Compared to Free-Flow (online calculation): $\qquad$
Upload the "Level of Congestion" map used for this measure.

## SCORING GUIDANCE (150 Points)

The applicant with the most congestion (measured by the largest percentage decrease in peak hour travel speeds relative to free flow conditions) will receive the full points for the measure. Remaining projects will receive a proportionate share of the points. For example, if the application being scored showed a $5 \%$ decrease of travel speeds in the peak hour relative to free flow conditions and the top project had a $10 \%$ reduction, this applicant would receive ( $5 / 10$ )*150 points, or 75 points.
B. MEASURE: Discuss how the project will reduce emissions and congestion. The applicant should focus on any reduction in CO, $\mathrm{NO}_{x}$, and VOC. Projects on roadways that provide relief to congested, parallel principal arterial roadways should reference the current MnDOT Metro Freeway Congestion Report and discuss the systemwide emissions and congestion impact of the proposed improvements.
RESPONSE: (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (50 Points)

The project that is most likely to reduce emissions and congestion will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion.
6. Safety (200 Points) - This criterion addresses the project's ability to correct deficiencies and improve the overall safety of an existing or future roadway facility. It will assess the project's monetized safety benefits.
A. MEASURE: Calculate the reduction in the total number of crashes due to improvements on the Aminor arterial or non-freeway principal arterial made by the project. The applicant must base the estimate of crash reduction on the methodology consistent with the latest MnDOT Metro District Highway Safety Improvement Program (HSIP) application (www.dot.state.mn.us/stateaid/trafficsafety.html). Applicants should focus on the crash analysis for reactive projects.
Crash data must be obtained for the project length using the MnDOT TIS system average for calendar years 2013-2017 through 20152019. Crash data should include all crash types and severities, including pedestrian and bicycle crashes.

Applicants should request crash data from MnDOT as early as possible. The applicant must then attach a listing of the crashes reduced and the HSIP Benefit/Cost (B/C) worksheet (www.dot.state.mn.us/stateaid/trafficsafety.html) that identifies the resulting benefit associated with the project. As part of the response, please detail and attach the crash modification factor(s) used from FHWA's Crash Modification Factors Clearinghouse: http://www.cmfclearinghouse.org/. This measure requests the monetized safety benefit of the project. The cost of the project is scored in the Cost Effectiveness criterion.

## RESPONSE:

- Crash Modification Factors Used $\qquad$
- Rationale for Crash Modifications Selected (Limit 1,400 characters; approximately 200 words):
- Project Benefit (\$) from B/C ratio: $\qquad$
Upload Crash Modification Factors and B/C Worksheet.

## SCORING GUIDANCE (50 Points)

The applicant with the highest dollar value of benefits will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had safety benefits of $\$ 11,000,000$ and the top project had safety benefits of $\$ 16,000,000$, this applicant would receive $(11,000,000 / 16,000,000) * 50$ points or 34 points.
B. MEASURE: Discuss how the project will improve safety issues in the project area. As part of the response, the applicant may want to reference the project relative to County Highway Safety Plan or similar planning documents and what the project will specifically do to improve the safety issue.
RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (150 Points)

The project that will provide the most safety benefits and alleviate identified safety concerns will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion.
7. Multimodal Elements and Existing Connections (50 Points) - This criterion measures how the project improves the travel experience, safety, and security for other modes of transportation, and addresses the safe integration of these modes. The Transportation Policy Plan requires that explicit consideration of all users of the transportation system be considered in the planning and scoping phase of roadway projects.
A. MEASURE: Describe how the project positively affects the multimodal system.

- Discuss any bicycle, pedestrian, or transit elements that are included as part of the project and how they improve the travel experience, safety, and security for users of these modes. Applicants should make sure that new multimodal elements described in the response are accounted for as part of the cost estimate form earlier in the application. Applicants should note if there is no transit service in the project area and identify supporting studies or plans that address why a mode may not be incorporated in the project (e.g., a bicycle system plan that locates bikeway facilities on a lower-volume parallel route).
- Describe how the proposed multimodal improvements positively affect identified alignments in the Regional Bicycle Transportation Network (RBTN) or along a regional trail, if applicable.
- Discuss the existing bicycle, pedestrian, and transit connections and how the project enhances these connections.
- Discuss whether the project implements specific locations identified as being deficient in a completed ADA Transition Plan.

## RESPONSE (Limit 2, 800 characters; approximately 400 words) :

[^7]8. Risk Assessment ( 75 Points) - This criterion measures the number of risks associated with successfully building the project. High-risk applications increase the likelihood that projects will withdraw at a later date. If this happens, the region is forced to reallocate the federal funds in a short amount of time or return them to the US Department of Transportation. These risks are outlined in the checklist in the required Risk Assessment.
A. MEASURE: Applications involving construction must complete the Risk Assessment. This checklist includes activities completed to-date, as well as an assessment of risks (e.g., right-of-way acquisition, proximity to historic properties, etc.).

## RESPONSE (Complete Risk Assessment):

Please check those that apply and fill in anticipated completion dates for all projects, except for new/expanded transit service projects or transit vehicle purchases.

1) Layout ( 30 Percent of Points)

Layout should include proposed geometrics and existing and proposed right-of-way boundaries $100 \% \square$ Layout approved by the applicant and all impacted jurisdictions (i.e., cities/counties that the project goes through or agencies that maintain the roadway(s)). A PDF of the layout must be attached along with letters from each jurisdiction to receive points.
$50 \% \quad \square$ Layout completed but not approved by all jurisdictions. A PDF of the layout must be attached to receive points.
0\% $\quad \square$ Layout has not been started
Anticipated date or date of completion: $\qquad$
2) Review of Section $\mathbf{1 0 6}$ Historic Resources ( $\mathbf{2 0}$ Percent of Points)
$100 \% \square$ No known historic properties eligible for or listed in the National Register of Historic Places are located in the project area, and project is not located on an identified historic bridge
$100 \% \square$ There are historical/archeological properties present but determination of "no historic properties affected" is anticipated.
80\% $\square$ Historic/archeological property impacted; determination of "no adverse effect" anticipated
40\% $\square$ Historic/archeological property impacted; determination of "adverse effect" anticipated
$0 \% \quad \square$ Unsure if there are any historic/archaeological properties in the project area.
Project is located on an identified historic bridge:
3) Right-of-Way ( $\mathbf{3 0}$ Percent of Points)
$100 \% \square$ Right-of-way, permanent or temporary easements either not required or all have been acquired
50\% $\square$ Right-of-way, permanent or temporary easements required, plat, legal descriptions, or official map complete
25\% $\square$ Right-of-way, permanent or temporary easements required, parcels identified
$0 \% \quad \square$ Right-of-way, permanent or temporary easements required, parcels not all identified
Anticipated date or date of acquisition $\qquad$
4) Railroad Involvement (20 Percent of Points)
$100 \% \square$ No railroad involvement on project or railroad Right-of-Way agreement is executed (include signature page, if applicable)
50\% $\square$ Railroad Right-of-Way Agreement required; negotiations have begun
$0 \% \quad \square$ Railroad Right-of-Way Agreement required; negotiations have not begun.

Anticipated date or date of executed Agreement $\qquad$

## SCORING GUIDANCE (75 Points)

The applicant with the most points on the Risk Assessment (more points equate to less project risk) will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 40 points and the top project had 70 points, this applicant would receive (40/70)*75 points or 43 points.
9. Cost Effectiveness (100 Points) - This criterion will assess the project's cost effectiveness or ability to leverage outside funding sourcesbased on the total TAB-eligible project cost (not including noise walls) and total points awarded in the previous 8 criteria.

## A. MEASURE:

## Cost Effectiveness:

Calculate the cost effectiveness of the project. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the TAB-eligible project cost (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/total TAB-eligible project cost (not including noise walls)

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Project Cost (entered in Project Cost Form): $\qquad$ (automatically calculated)
- Enter amount of Noise Walls: $\qquad$
- Points Awarded in Previous Criteria: $\qquad$ (entered by Metropolitan Council staff)

## Leveraging Outside Funding Sources:

This measure will calculate the cost effectiveness of the project and how well the project leverages outside funding sources. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the requested award (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/requested award (not including noise walls)
RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):
- Total Award Request: (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: (entered by Metropolitan Council staff)

## SCORING GUIDANCE (100 Points)

Due to the two scoring methods, more than one project can score the maximum points
Cost Effectiveness: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

Leveraging Outside Funding Sources: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

The scorer for this measure will also complete a reasonableness check of the total project cost that is used for this measure. The scorer may follow up with the applicant to clarify any questions. Up to 50 percent of points awarded for this measure can be deducted if the scorer does not believe that the cost estimate is reasonable.

The scorer will assess if the applicant would score highest with the cost effectiveness part of the measure or the leveraging of outside funding sources part of the measure and give the applicant the highest of the two scores out of a maximum of 100 points.

Note: Due to the use of multiple sub-sections, multiple applicants may receive the full 100 points.

## TOTAL: 1,100 POINTS

## Bridges - Prioritizing Criteria and Measures

## April 23, 2019

Definition: A bridge rehabilitation or replacement project located on a non-freeway principal arterial or A-minor arterial functionally-classified roadway, consistent with the latest TAB-approved functional classification map. Bridge structures that have a separate span for each direction of travel can apply for both spans as part of one application.

The bridge must carry vehicular traffic but may also include accommodations for other modes. Bridges that are exclusively for bicycle or pedestrian traffic must apply under one of the Bicycle and Pedestrian Facilities application categories. Rail-only bridges are not eligible for funding. Completely new bridges, interchanges, or overpasses should apply in the Roadway Expansion application category.

## Examples of Bridge Rehabilitation/Replacement Projects:

- Bridge rehabilitation of 20 or more feet with a sufficiency rating less than 80 and classified as structurally deficient or functionally obsolete.
- Bridge replacement of 20 or more feet with a sufficiency rating less than 50 and classified as structurally deficient or functionally obsolete.

## Scoring:

| Criteria and Measures | Points | \% of Total Points |
| :---: | :---: | :---: |
| 1. Role in the Regional Transportation System and Economy | 195 | 18\% |
| Measure A - Distance to the nearest parallel bridge | 100 |  |
| Measure B - Project Location Relative to Jobs, Manufacturing, and Education | 30 |  |
| Measure C-Regional Truck Corridor Tiers | 65 |  |
| 2. Usage | 130 | 12\% |
| Measure A - Current daily person throughput | 100 |  |
| Measure B - Forecast 2040 average daily traffic volume | 30 |  |
| 3. Equity and Housing Performance | 100 | 9\% |
| Measure A - Connection to disadvantaged populations and project's benefits, impacts, and mitigation | 30 |  |
| Measure B - Housing Performance Score | 70 |  |
| 4. Infrastructure Condition | 400 | 36\% |
| Measure A - Bridge Sufficiency Rating | 300 |  |
| Measure B - Load-Posting | 100 |  |
| 5. Multimodal Elements and Existing Connections | 100 | 9\% |
| Measure A - Transit, bicycle, or pedestrian project elements and connections | 100 |  |
| 6. Risk Assessment | 75 | 7\% |
| Measure A - Risk Assessment Form | 75 |  |
| 7. Cost Effectiveness | 100 | 9\% |
| Measure A - Cost effectiveness (total points awarded/total project cost) or leveraging other resources (total points awarded/award requested) | 100 |  |
| Total | 1,100 |  |

1. Role in the Regional Transportation System and Economy (195 Points) - Tying regional policy (Thrive MSP2040) to the Regional Solicitation, this criterion measures the project's ability to serve a transportation purpose within the regional transportation system and economy based on how well it fulfills its functional classification role, connects to employment, post-secondary students, and manufacturing/distribution-related employment, and aligns with the Regional Truck Corridor Study tiers.
A. MEASURE: Address how the project route fulfills its role in the regional transportation system by measuring the diversion to the nearest parallel crossing (must be an A-minor arterial or principal arterial) if the proposed project is closed. The project must be located on a non-freeway principal arterial or an A-minor arterial.

## RESPONSE:

- Location of nearest parallel crossing: $\qquad$
- Explanation (Limit 2,800 characters; approximately 400 words):
- Distance from one end of proposed project to nearest parallel crossing (that is an A-minor arterial or principal arterial) and then back to the other side of the proposed project using non-local roadways: $\qquad$ (calculated by Council Staff)

## SCORING GUIDANCE (100 Points)

The applicant with the furthest distance from the closest parallel A-minor arterial or principal arterial bridge on-will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the project being scored had a distance of 8 miles and the top project was had a distance of 10 miles, this applicant would receive ( $8 / 10$ ) ${ }^{*} 100$ points or 80 points.
B. MEASURE: Reference the "Regional Economy" map generated at the beginning of the application process. Report the employment, manufacturing/distribution-related employment, and postsecondary students enrolled within one mile, as depicted on the "Regional Economy" map.

## RESPONSE (Data from the "Regional Economy" map):

- Existing Employment within 1 Mile: $\qquad$ (Maximum of 30 points)
- Existing Manufacturing/Distribution-Related Employment within 1 Mile: $\qquad$ (Maximum of 30 points)
- Existing Post-Secondary Students within 1 Mile: $\qquad$ (Maximum of 18 points)

Upload the "Regional Economy" map used for this measure.

## SCORING GUIDANCE (30 Points)

All Census block groups that are included within or intersect the buffer area around the project will be included.

The applicant with the highest existing total employment will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 1,000 workers within one mile and the top project had 1,500 workers, this applicant would receive $(1,000 / 1,500) * 30$ points or 20 points.

The applicant with the highest existing manufacturing/distribution-related employment will receive the full points. Remaining projects will receive a proportionate share of the full points equal to the existing manufacturing/distribution-related employment within one mile of the project being scored divided by the project with the highest manufacturing/distribution-related employment within one mile multiplied by the maximum points available for the measure (20). For example, if the application being scored had 1,000 manufacturing/distribution-related workers within one mile and the top project had 1,500 manufacturing/distribution-related workers, this applicant would receive ( $1,000 / 1,500$ )*30 points or 20 points.

The applicant with the highest number of post-secondary students will receive 30 points. Remaining projects will receive a proportionate share of the 30 points. For example, if the application being scored had 1,000 students within one mile and the top project had 1,500 students, this applicant would receive $(1,000 / 1,500) * 18$ points or 12 points.

The scorer will assess if the applicant would score highest with the total employment part of the measure, the manufacturing/distribution employment part of the measure, or the education part of the measure and give the applicant the highest of the three scores out of a maximum of 30 points.

Note: Due to the use of multiple sub-measures, two applicants can receive the full 30 points.
C. MEASURE: This measure relies on the results in the Regional Truck Corridor Study, which prioritized all principal and minor arterials based on truck volume, truck percentage of total traffic, proximity to freight industry clusters, and proximity to regional freight terminals. (65 points)

Use the final study report for this measure:
https://metrocouncil.org/Transportation/Planning-2/Transit-Plans,-Studies-Reports/Highways-Roads/Truck-Freight-Corridor-Study.aspx

RESPONSE (Select one for your project, based on the Regional Truck Corridor Study:

- The project is located on either a Tier 1, Tier 2, or Tier 3 corridor: $\square$ (65 Points)
- The project provides a direct and immediate connection (i.e., intersects) with either a Tier 1, Tier 2, or Tier 3 corridor: $\square$ ( 10 Points)
- The project is not located on a Tier 1, Tier 2, or Tier 3 corridor: $\square$ (0 Points)

## SCORING GUIDANCE (65 Points)

The scorer will assign points based on which of the scores applies. Note that multiple applicants can score the maximum point allotment.
2. Usage (130 Points) - This criterion quantifies the project's potential impact by measuring the current daily person throughput and future vehicular traffic that will be served by the project. These roadway users directly benefit from the project improvements on the A-minor arterial or non-freeway principal arterial.
A. MEASURE: Metropolitan Council staff will calculate the current daily person throughput at one location on the A-minor arterial or non-freeway principal arterial bridge using the current average annual daily traffic (AADT) volume and average annual ridership. The applicant must identify the location along the project length and provide the current AADT volume from the MnDOT 50 -series maps (select Twin Cities Metro Area Street Series under Traffic Volume (AADT)). Reference the "Transit Connections" map for transit routes along the project. Ridership data will be provided by the Metropolitan Council staff, if public transit is currently provided on the project length.

- Current Daily Person Throughput = (current average annual daily traffic volume $\times 1.30$ vehicle occupancy) + average annual daily transit ridership (2019z017)

## RESPONSE:

- Location:
- Current AADT volume:
- Existing Transit Routes on the Project:

Upload the "Transit Connections" map.

## SCORING GUIDANCE (100 Points)

The applicant with highest current daily person throughput will receive the full points for the measure. Remaining projects will receive a proportionate share of the full. For example, if the application being scored had a daily person throughput of 1,000 vehicles-people and the top project had a daily person throughput of 1,500 hiclespeople, this applicant would receive (1,000/1,500)*100 points or 67 points.
B. MEASURE: Provide the forecast (2040) average daily traffic volume at the same location on the Aminor arterial or non-freeway principal arterial bridge, as identified in the previous measure. The applicant may choose to use a county or city travel demand model based on the Metropolitan Council model to identify the forecast (2040) average daily traffic volume or have Metropolitan Council staff determine the forecast volume using the Metropolitan Council model and project location. Respond as appropriate to the use of one type of forecast model. (30 points)

## RESPONSE:

- Use Metropolitan Council model to determine forecast (2040) ADT volume $\square$
- METC Staff-Forecast (2040) ADT volume $\square$

OR

## RESPONSE:

- Identify the approved county or city travel demand model to determine forecast (2040) ADT volume $\square$
- Forecast (2040) ADT volume :

## SCORING GUIDANCE (30 Points)

The applicant with the highest forecast (2040) ADT volume will receive the full points for the measure.

Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily forecast of 28,000 vehicles and the top project had a daily forecast of 32,000 vehicles, this applicant would receive $(28,000 / 32,000) * 30$ points or 26 points.
3. Equity and Housing Performance (100 Points) - This criterion addresses the Council's role in advancing equity by examining the project's positive and negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly along with outreach to those groups. The criterion also evaluates a community's efforts to promote affordable housing.
A. MEASURE: Reference the "Socio-Economic Conditions" map generated at the beginning of the application process. Identify the project's location from the list below, as depicted on the map. Geographic proximity alone is not sufficient to receive the full points. In order to receive the maximum points, the response should address equitable distribution of benefits, mitigation of negative impacts, and community engagement for the populations selected. ( 30 Points)

Upload the "Socio-Economic Conditions" map used for this measure.
RESPONSE (Select one, based on the "Socio-Economic Conditions" map):

- Project located in Area of Concentrated Poverty with $50 \%$ or more of residents are people of color (ACP50): $\square$ (up to $100 \%$ of maximum score)
- Project located in Area of Concentrated Poverty: $\square$ (up to $80 \%$ of maximum score)
- Project's census tracts are above the regional average for population in poverty or population of color: $\square$ (up to $60 \%$ of maximum score)
- Project located in a census tract that is below the regional average for population in poverty or populations of color, or includes children, people with disabilities, or the elderly: $\square$ (up to $40 \%$ of maximum score)

1. ( 0 to 3 points) A successful project is one that has actively engaged in low-income populations, people of color, children, persons with disabilities, and the elderly during the project's development with the intent to limit negative impacts on them and, at the same time, provide the most benefits. Describe how the project has encouraged or will engage the full cross-section of community in decision-making. Identify the communities to be engaged and where in the project development process engagement has occurred or will occur. Elements of quality engagement include: outreach to specific communities and populations that are likely to be directly impacted by the project; techniques to reach out to populations traditionally not involved in the community engagement related to transportation projects; residents or users identifying potential positive and negative elements of the project; and surveys, study recommendations, or plans that provide feedback from populations that may be impacted by the proposed project. If relevant, describe how NEPA or Title VI regulations will guide engagement activities.
(Limit 1,400 characters; approximately 200 words):
2. ( 0 to 7 points) Describe the project's benefits to low-income populations, people of color, children, people with disabilities, and the elderly. Benefits could relate to safety; public health; access to destinations; travel time; gap closure; leveraging of other beneficial projects and investments; and/or community cohesion. Note that this is not an exhaustive list.

## (Limit 2,800 characters; approximately 400 words):

3. ( -3 to 0 points) Describe any negative externalities created by the project along with measures that will be taken to mitigate them. Negative externalities can result in a reduction in points, but mitigation of externalities can offset reductions.

$$
\text { (Limit 2,800 characters; approximately } 400 \text { words): }
$$

Below is a list of negative impacts. Note that this is not an exhaustive list.

- Increased difficulty in street crossing caused by increased roadway width, increased traffic speed, wider turning radii, or other elements that negatively impact pedestrian access.
- Increased noise.
- Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.
- Project elements that are detrimental to location-based air quality by increasing stop/start activity at intersections, creating vehicle idling areas, directing an increased number of vehicles to a particular point, etc.
- Increased speed and/or "cut-through" traffic.
- Removed or diminished safe bicycle access.
- Inclusion of some other barrier to access to jobs and other destinations.
- Displacement of residents and businesses.
- Construction/implementation impacts such as dust; noise; reduced access for travelers and to businesses; disruption of utilities; and eliminated street crossings. These tend to be temporary.
- Other

## SCORING GUIDANCE (30 Points)

Each application will be scored on a 10-point scale as described below.

1. (3 points): The project(s) with the most impactful and meaningful community engagement will receive the full three points. Remaining projects will receive a share of the full points at the scorer's discretion.
2. (7 points) The project(s) with the most positive benefits will receive the full seven points. Remaining projects will receive a share of the full points at the scorer's discretion.
3. ( -3 to 0 points) The scorer will reduce the score by one point (up to three total) for each negative externality. Note that the scorer can deduct points for negatives not acknowledged in the application; the scorer will document any negatives not acknowledged in the application and the reasons for any associated point reductions. The scorer can add one to three points for successful mitigation of negative project elements based on the degree to which they are mitigated. Note that this score cannot provide more points than are deducted.

Each score from the above 10-point scale will then be adjusted to the appropriate geography.
Note: Due to the geographic adjustment to scores, it is possible that the above process will result in no project receiving the maximum allotment of points. In this case, the highest-scoring application for this measure will be adjusted to receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 10 points and the top project had 20 points, this applicant would receive (10/20)*30 points or 15 points. Note also that it is possible to score negative points on this measure.
B. MEASURE: Metropolitan Council staff will award points to the project based on the 20172019 Housing Performance Score for the city or township in which the project is located. The score includes consideration of affordability and diversification, local initiatives to facilitate affordable workforce housing development or preservation, and density of residential development. A one-mile radiusbuffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer. (70 Points)

## RESPONSE:

- City/Township:
- Population from the "Regional Economy" map within each City/Township entered: $\qquad$
- Housing Score: $\qquad$ (online calculation)

## SCORING GUIDANCE (70 Points)

The applicant with the highest 2017-2019 Housing Performance Score will receive the full points. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a Housing Performance Score of 55 and the top project had a Housing Performance Score of 90 , this applicant would receive (55/90)*70 points or 43 points.

Note: Metropolitan Council staff will score this measure.
Projects will use the city Housing Performance Score based on the project location. A one-mile radiusbuffer will be drawn around the project. If the radius-buffer enters more than one jurisdiction, the points will be awarded based on the proportionate population of the Census blocks in each jurisdiction that are all or partially located in the area within the one-mile radius-buffer.
If a project is located in a city or township with no allocation of affordable housing need (either there is no forecasted household growth or the area does not have land to support sewered development), then the project will not be disadvantaged by this measure and the project's total score will be adjusted as a result.

If this is the case, then the total points possible in the application will be 930 instead of 1,000. The total points awarded through the rest of the application ( 900 as a hypothetical example) will be divided by 930 , then multiplied by 1,000 . Therefore, a project scoring 900 out of 930 , will equate to 968 points on a 1,000-point scale.
If a portion of the project is located in a city with an affordable housing allocation and the other portion is located in a township with no affordable housing allocation, then a combination of the weighted average and no affordable housing methodologies should be used. This will result in a total score that will be somewhere between 930 and 1,000 ; then the score will need to be adjusted to fit a 1,000-point scale.
4. Infrastructure Condition (400 Points) - This criterion will assess the age and condition of the bridge facility being improved. Bridge improvement investments should focus on the higher needs of unsafe facilities. If there are two separate spans, then the applicant should take the average bridge sufficiency rating of the two spans.
A. MEASURE: Identify the bridge sufficiency rating, from the most recent market structure inventory report. Attach the report to the application.

## RESPONSE:

- Bridge Sufficiency Rating: $\qquad$
Upload Structure Inventory Report.

## SCORING GUIDANCE (300 Points)

The applicant with the lowest bridge sufficiency rating will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points equal to the rating for the project with the lowest bridge sufficiency rating divided by the project being scored multiplied by the maximum points available for the measure (300). For example, if the top project had a bridge sufficiency rating of 35 and the application being scored had a score of 55 , this applicant would receive ( $35 / 55$ )*300 points or 191 points.
B. MEASURE: Identify whether the bridge is posted for load restrictions.

RESPONSE (Check box if the bridge is load-posted):

- Load-Posted (Check box if the bridge is load-posted):

## SCORING GUIDANCE (100 Points)

Applicants will receive the points shown depending on whether the bridge is load-posted. The applicant can only score 0 or 100 points for this measure.
5. Multimodal Elements and Connections (100 Points) - This criterion measures how the project improves the travel experience, safety, and security for other modes of transportation and addresses the safe integration of these modes. The Transportation Policy Plan requires that explicit consideration of all users of the transportation system be considered in the planning and scoping phase of roadway projects.
A. MEASURE: Describe how the project positively affects the multimodal system.

- Discuss any bicycle, pedestrian, or transit elements that are included as part of the project and how they improve the travel experience, safety, and security for users of these modes. Applicants should make sure that new multimodal elements described in the response are accounted for as part of the cost estimate form earlier in the application. Applicants should note if there is no transit service in the project area and identify supporting studies or plans that address why a mode may not be incorporated in the project (e.g., a bicycle system plan that locates bikeway facilities on a lower-volume parallel route).
- Describe how the proposed multimodal improvements positively affect identified alignments in the Regional Bicycle Transportation Network (RBTN) or along a regional trail, if applicable.
- Describe how the proposed multimodal improvements either provide a new, or improve an existing a Major River Bicycle Barrier Crossing (MRBBC) as defined in the 2040 Transportation Policy Plan (TPP) or an identified Regional Bicycle Barrier Improvement Area as defined in the TPP and Technical Addendum to the Regional Bicycle Barriers Study (May 2019), if applicable.
- Discuss the existing bicycle, pedestrian, and transit connections and how the project enhances these connections.
- Discuss whether the project implements specific locations identified as being deficient in a completed ADA Transition Plan.

RESPONSE (Limit 2,800 characters; approximately 400 words):

## SCORING GUIDANCE (100 Points)

The project that most positively affects the multimodal will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion. The project score will be based on the quality of the improvements, as opposed to being based solely on the number of modes addressed. Points can be earned for incorporating multimodal project elements, positively affecting identified alignments in the Regional Bicycle Transportation Network (RBTN), orregional trail, Major River Bicycle Barrier Crossing, or Regional Bicycle Barrier, or for making connections with existing multimodal systems, or helping to implement an ADA Transition Plan.- -Multimodal elements for rural roadway projects may include wider shoulders that will be used by bicyclists and pedestrians.
Scorers should make sure that new multimodal elements described in the response are accounted for on the cost estimate form earlier in the application.
6. Risk Assessment ( 75 Points) - This criterion measures the number of risks associated with successfully building the project. High-risk applications increase the likelihood that projects will withdraw at a later date. If this happens, the region is forced to reallocate the federal funds in a short amount of time or return them to the US Department of Transportation. These risks are outlined in the checklist in the required Risk Assessment.
A. MEASURE: Applications involving construction must complete the Risk Assessment. This checklist includes activities completed to-date, as well as an assessment of risks (e.g., right-of-way acquisition, proximity to historic properties, etc.).

## RESPONSE (Complete Risk Assessment):

Please check those that apply and fill in anticipated completion dates for all projects, except for new/expanded transit service projects or transit vehicle purchases.

## 1) Layout ( $\mathbf{3 0}$ Percent of Points)

Layout should include proposed geometrics and existing and proposed right-of-way boundaries $100 \% \square$ Layout approved by the applicant and all impacted jurisdictions (i.e., cities/counties that the project goes through or agencies that maintain the roadway(s)). A PDF of the layout must be attached along with letters from each jurisdiction to receive points.
$50 \% \quad \square$ Layout completed but not approved by all jurisdictions. A PDF of the layout must be attached to receive points.
$0 \% \quad \square$ Layout has not been started
Anticipated date or date of completion: $\qquad$
2) Review of Section $\mathbf{1 0 6}$ Historic Resources ( $\mathbf{2 0}$ Percent of Points)
$100 \% \square$ No known historic properties eligible for or listed in the National Register of Historic Places are located in the project area, and project is not located on an identified historic bridge
$100 \% \square$ There are historical/archeological properties present but determination of "no historic properties affected" is anticipated.
$100 \% \square$ Historic/archeological property impacted; determination of "no adverse effect" anticipated
40\% $\square$ Historic/archeological property impacted; determination of "adverse effect" anticipated
$0 \% \quad \square$ Unsure if there are any historic/archaeological properties in the project area.
Project is located on an identified historic bridge:
3) Right-of-Way (30 Percent of Points)
$100 \% \square$ Right-of-way, permanent or temporary easements either not required or all have been acquired
50\% $\square$ Right-of-way, permanent or temporary easements required, plat, legal descriptions, or official map complete
25\% $\square$ Right-of-way, permanent or temporary easements required, parcels identified
$0 \% \quad \square$ Right-of-way, permanent or temporary easements required, parcels not all identified
Anticipated date or date of acquisition $\qquad$

## 4) Railroad Involvement ( 20 Percent of Points)

$100 \% \square$ No railroad involvement on project or railroad Right-of-Way agreement is executed (include signature page, if applicable)
50\% $\square$ Railroad Right-of-Way Agreement required; negotiations have begun
0\% $\quad \square$ Railroad Right-of-Way Agreement required; negotiations have not begun.
Anticipated date or date of executed Agreement $\qquad$

[^8]7. Cost Effectiveness (100 Points) - This criterion will assess the project's cost effectiveness or ability to leverage outside funding sourcesbased on the TAB-eligible project cost (not including noise walls) and total points awarded in the previous six criteria.
A. MEASURE:

## Cost Effectiveness:

This measure will calculate the cost effectiveness of the project. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the TAB-eligible project cost (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/total TAB-eligible project cost (not including noise walls)

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Project Cost (entered in Project Cost Form): $\qquad$ (automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: $\qquad$ (entered by Metropolitan Council staff)

## Leveraging Outside Funding Sources:

This measure will calculate the cost effectiveness of the project and how well the project leverages outside funding sources. Metropolitan Council staff will divide the number of points awarded in the previous criteria by the requested award (not including noise walls).

- Cost effectiveness = total number of points awarded in previous criteria/requested award (not including noise walls)

RESPONSE (This measure will be calculated after the scores for the other measures are tabulated by the Scoring Committee):

- Total Award Request:
(automatically calculated)
- Enter amount of Noise Walls:
- Points Awarded in Previous Criteria: (entered by Metropolitan Council staff)

## SCORING GUIDANCE (100 Points)

Due to the two scoring methods, more than one project can score the maximum points
Cost Effectiveness: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

Leveraging Outside Funding Sources: The applicant with the most points (i.e., the benefits) per dollar will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the top project received .0005 points per dollar and the application being scored received .00025 points per dollar, this applicant would receive (.00025/.0005)*100 points or 50 points.

The scorer for this measure will also complete a reasonableness check of the total project cost that is used for this measure. The scorer may follow up with the applicant to clarify any questions. Up to 50 percent of points awarded for this measure can be deducted if the scorer does not believe that the cost estimate is reasonable.
The scorer will assess if the applicant would score highest with the cost effectiveness part of the measure or the leveraging of outside funding sources part of the measure and give the applicant the highest of the two scores out of a maximum of 100 points.

Note: Due to the use of multiple sub-sections, multiple applicants may receive the full 100 points.

## TOTAL: 1,100 POINTS

[^0]:    ${ }^{1}$ For definitions, see Highway Functional Classification Concepts, Criteria and Procedures, 2013 Edition, U.S. Department of Transportation Federal Highway Administration

[^1]:    ${ }^{3}$ From CFR 93.101: A hot spot analysis is an estimation of likely future localized CO, $\mathrm{PM}_{10}$, and/or $\mathrm{PM}_{25}$ pollutant concentrations and a comparison of those concentrations to the national ambient air quality standards. Hot-spot analysis assesses impacts on a scale smaller than the entire nonattainment or maintenance area, including, for example, congested roadway intersections and highways or transit terminals, and uses an air quality dispersion model to determine the effects of emissions on air quality.

[^2]:    ${ }^{4}$ Twelve cities have elected to provide their own transit service. Today, through agreements and consolidations, the region includes four suburban transit providers (SW Transit, MVTA, Maple Grove and Plymouth).

[^3]:    (Limit 2,800 characters; approximately 400 words):

[^4]:    SCORING GUIDANCE (100 Points)
    The project that most positively affects the multimodal system will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion. The project score will be based on the quality of the improvements, as opposed to being based solely on the number of modes addressed. Points can be earned for incorporating multimodal project elements, positively affecting identified alignments in the Regional Bicycle Transportation Network (RBTN), orregional trail, Major River Bicycle Barrier Crossing, or Regional Bicycle Barrier, for making connections with existing multimodal systems, or helping to implement an ADA Transition Plan. Multimodal elements for rural roadway projects may include wider shoulders that will be used by bicyclists and pedestrians.
    Scorers should make sure that new multimodal elements described in the response are accounted for on the cost estimate form earlier in the application.

[^5]:    (Limit 2,800 characters; approximately 400 words):

[^6]:    The project with highest current daily person throughput will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had a daily person throughput of 1,000 vehicles-people and the top project had a daily person throughput of 1,500 peoplevehicles, this applicant would receive $(1,000 / 1,500)$ * 85 points or 56 points.

[^7]:    SCORING GUIDANCE (50 Points)
    The project that most positively affects the multimodal system will receive the full points. Remaining projects will receive a share of the full points at the scorer's discretion. The project score will be based on the quality of the improvements, as opposed to being based solely on the number of modes addressed. Points can be earned for incorporating multimodal project elements, positively affecting identified alignments in the Regional Bicycle Transportation Network (RBTN) or regional trail, or for making connections with existing multimodal systems, or helping to implement an ADA Transition Plan. Scorers should make sure that new multimodal elements described in the response are accounted for on the cost estimate form earlier in the application.

[^8]:    SCORING GUIDANCE (75 Points)
    The applicant with the most points on the Risk Assessment (more points equate to less project risk) will receive the full points for the measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored had 40 points and the top project had 70 points, this applicant would receive $(40 / 70) * 75$ points or 43 points.
