

# Recommendations: Land Use and Water Supply

Lanya Ross, Environmental Analyst, MCES Water Supply Planning  
Emily Steinweg, Senior Engineer, MCES Water Supply Planning

MAWSAC Meeting: July 20, 2021

# PRE-WORK: Review info shared by committee members and staff in memo attached to meeting agenda

## Resources related to the following topics:

- Key source water protection **laws and rules**
- **Land use** and **landscape** information
- MDH **source water** protection program
- Examples of **collaborative approaches**
- Examples of Metropolitan Council **technical assistance** (grant programs & guidance)
- Examples of **local source water** protection work
- **Groundwater monitoring data**
- **Community Data**

**Committee members are encouraged to share useful and interesting resources!**

# Working Together

## Metro Area Water Supply Advisory Committee (MAWSAC)

- Informs Metropolitan Council's water supply planning activities and preparation of its regional development framework.
- Pools collective expertise to address increasingly complex water problems that require a collaborative approach.

**What recommendations to make as a committee around land use and water supply?** This information will be included in a 2022 report to the Metropolitan Council and Minnesota Legislature.

## Presentation overview:

- 1) Introduce proposed language
- 2) Consider regional and local context
- 3) Explore and revise proposal
- 4) Next steps

# LAND USE & WATER SUPPLY

## DRAFT RECOMMENDATIONS

### Problem or need

Many of our current water quality problems came about because we didn't realize the implications of our land use – and related industrial and commercial waste – years ago. We have opportunities to make choices now with our current land use that help prevent the kind of legacy contamination that past land use practices have caused.

### Goal

The TAC, serving at the pleasure of the MAWSAC, recommends that the MAWSAC, with the Metropolitan Council and the State of Minnesota, promote actions so that public water suppliers, land use planners and developers have tools and are empowered to work together to support communities' economic needs while protecting the quantity and quality of critical source waters. Local actions that protect source water need to be better understood, coordinated, and incentivized in the region. Forethought in land use planning today provides opportunities to prevent contamination in the future.

### Solutions

- **Financial support** – *funding available for land use practices for sustainable water supply, sub-regional wellhead protection*
- **Outreach, engagement, training** – *subregional collaboration and local planning assistance for wellhead protection*
- **Research** – *enhance monitoring and data accessibility, wellhead delineation, water supply risk mapping, and cost benefit analyses*
- **Regulatory** – *Wellhead protection plans in comprehensive plans, revised wellhead rules*
- **Regional policies & planning** – *water supply embedded in metropolitan development guide and regional policies, updated expectations for local water supply and comp plan content*

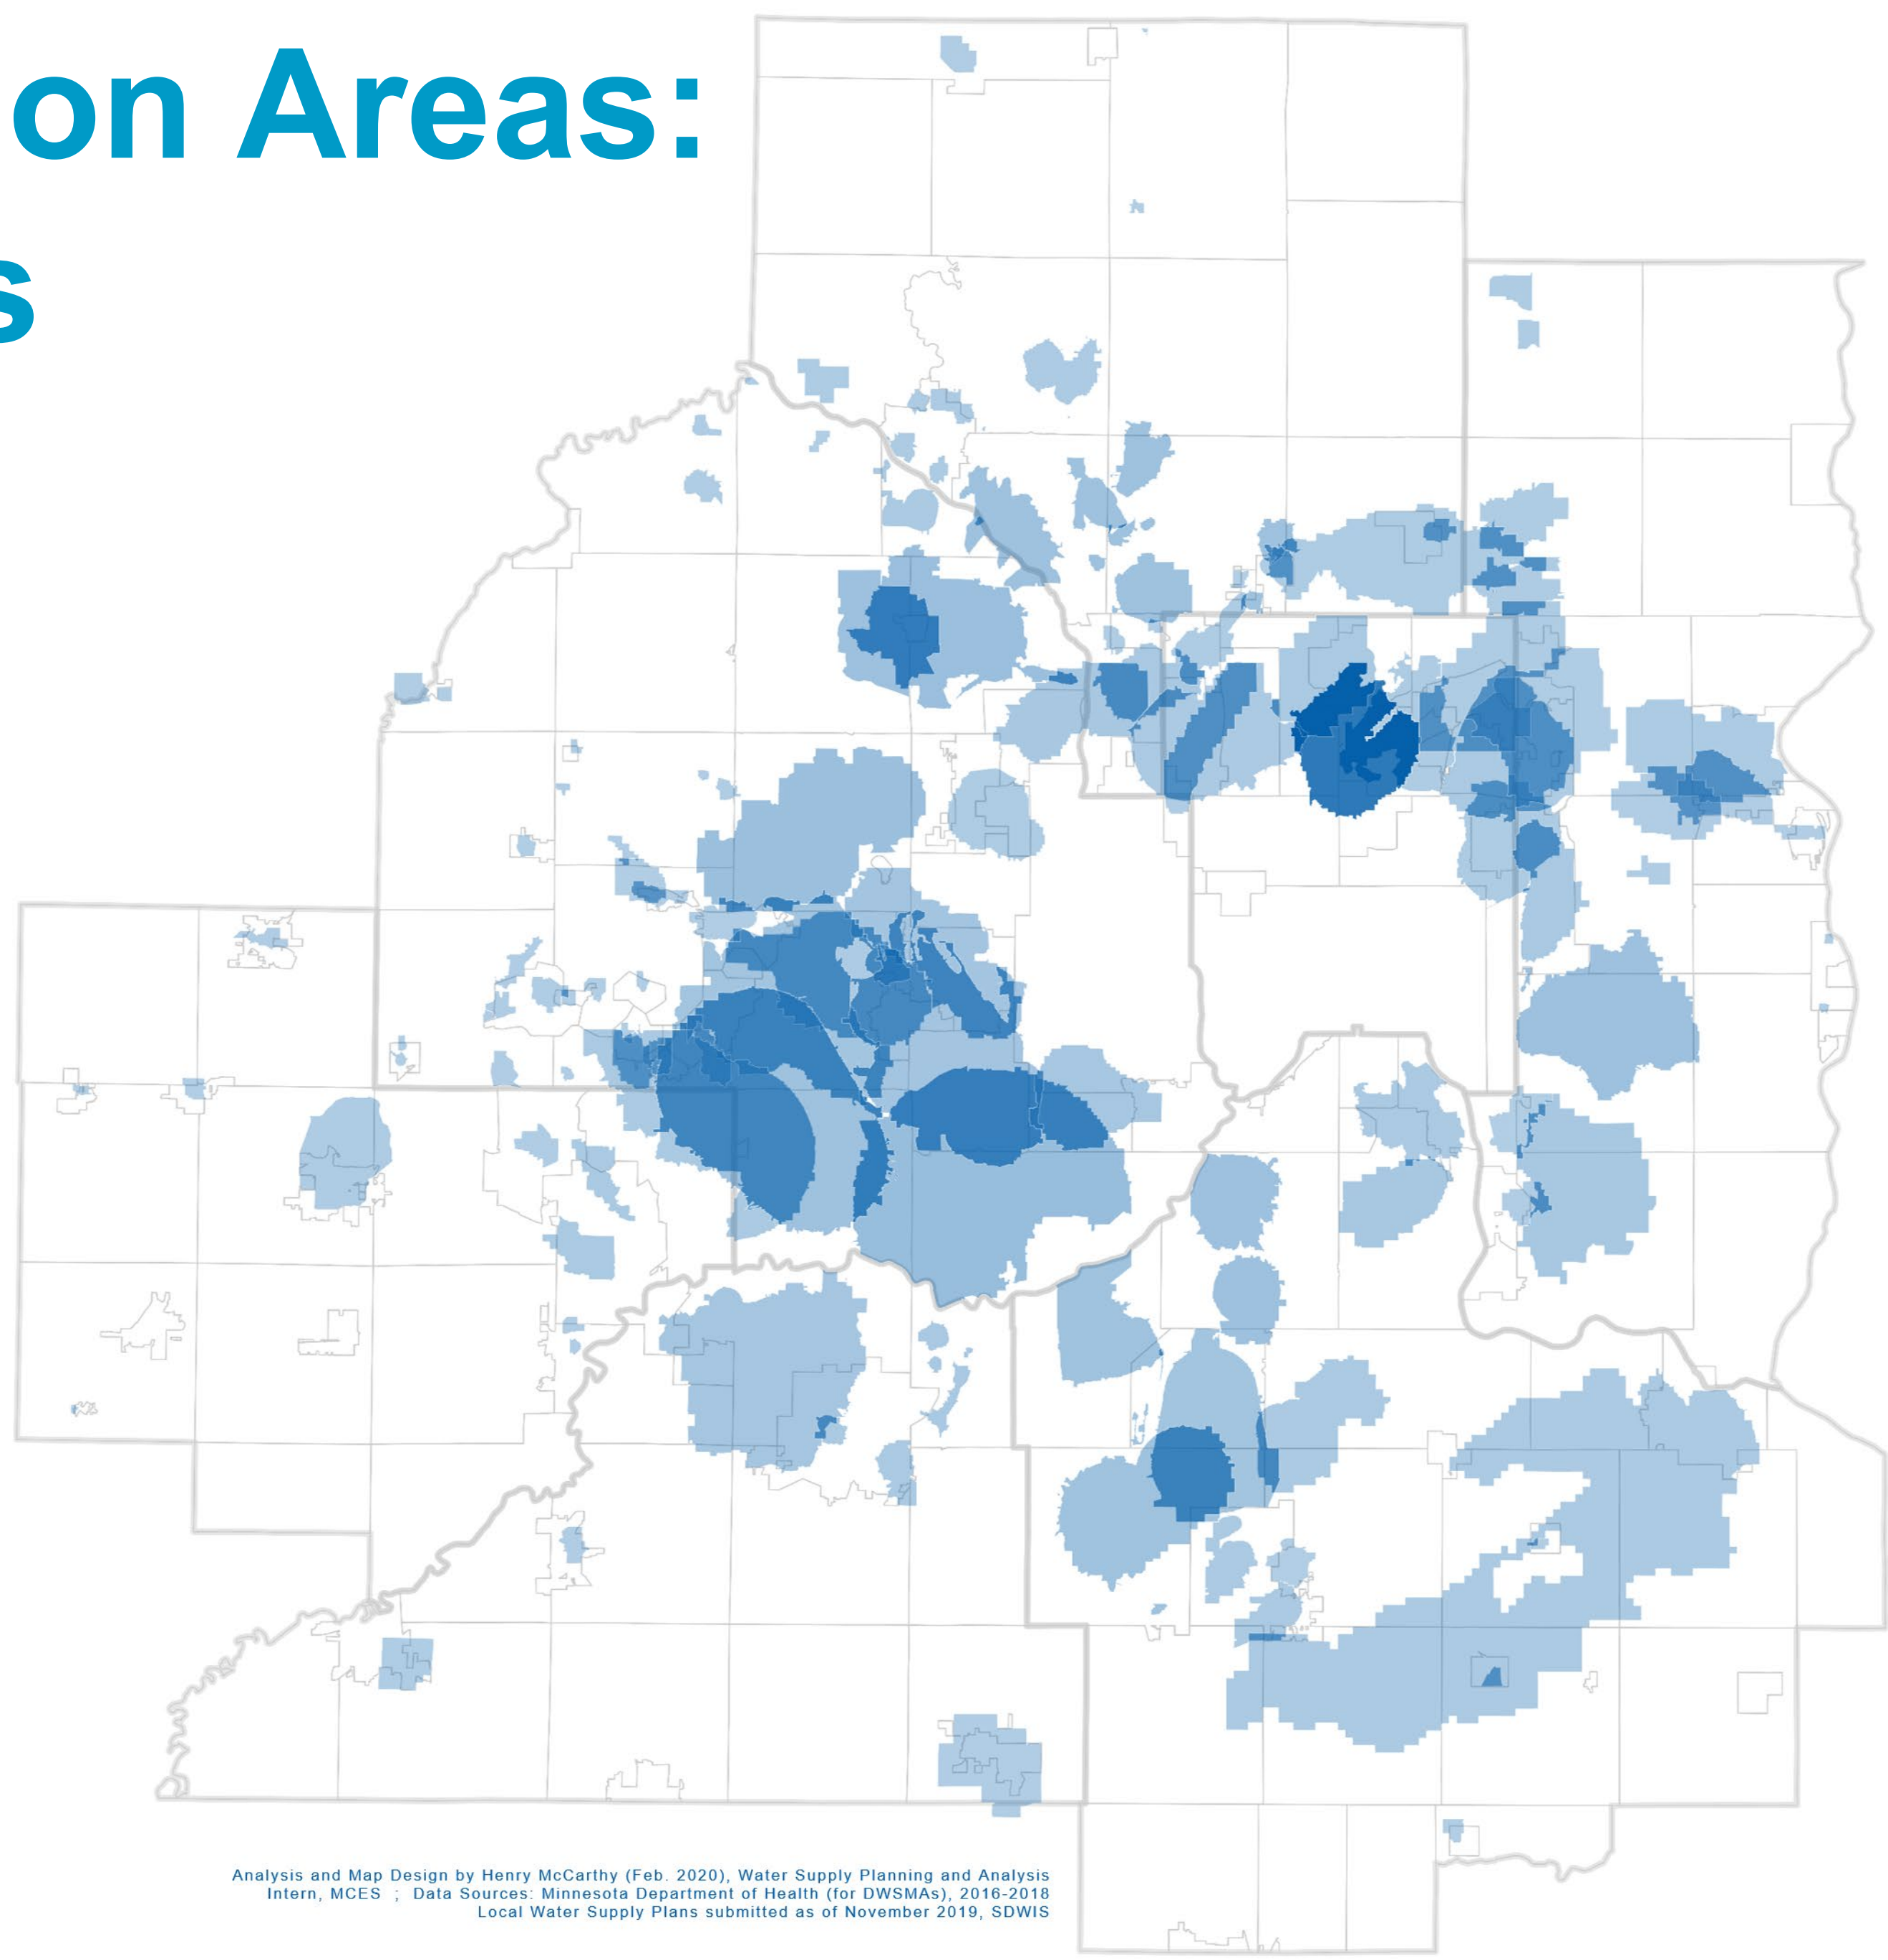

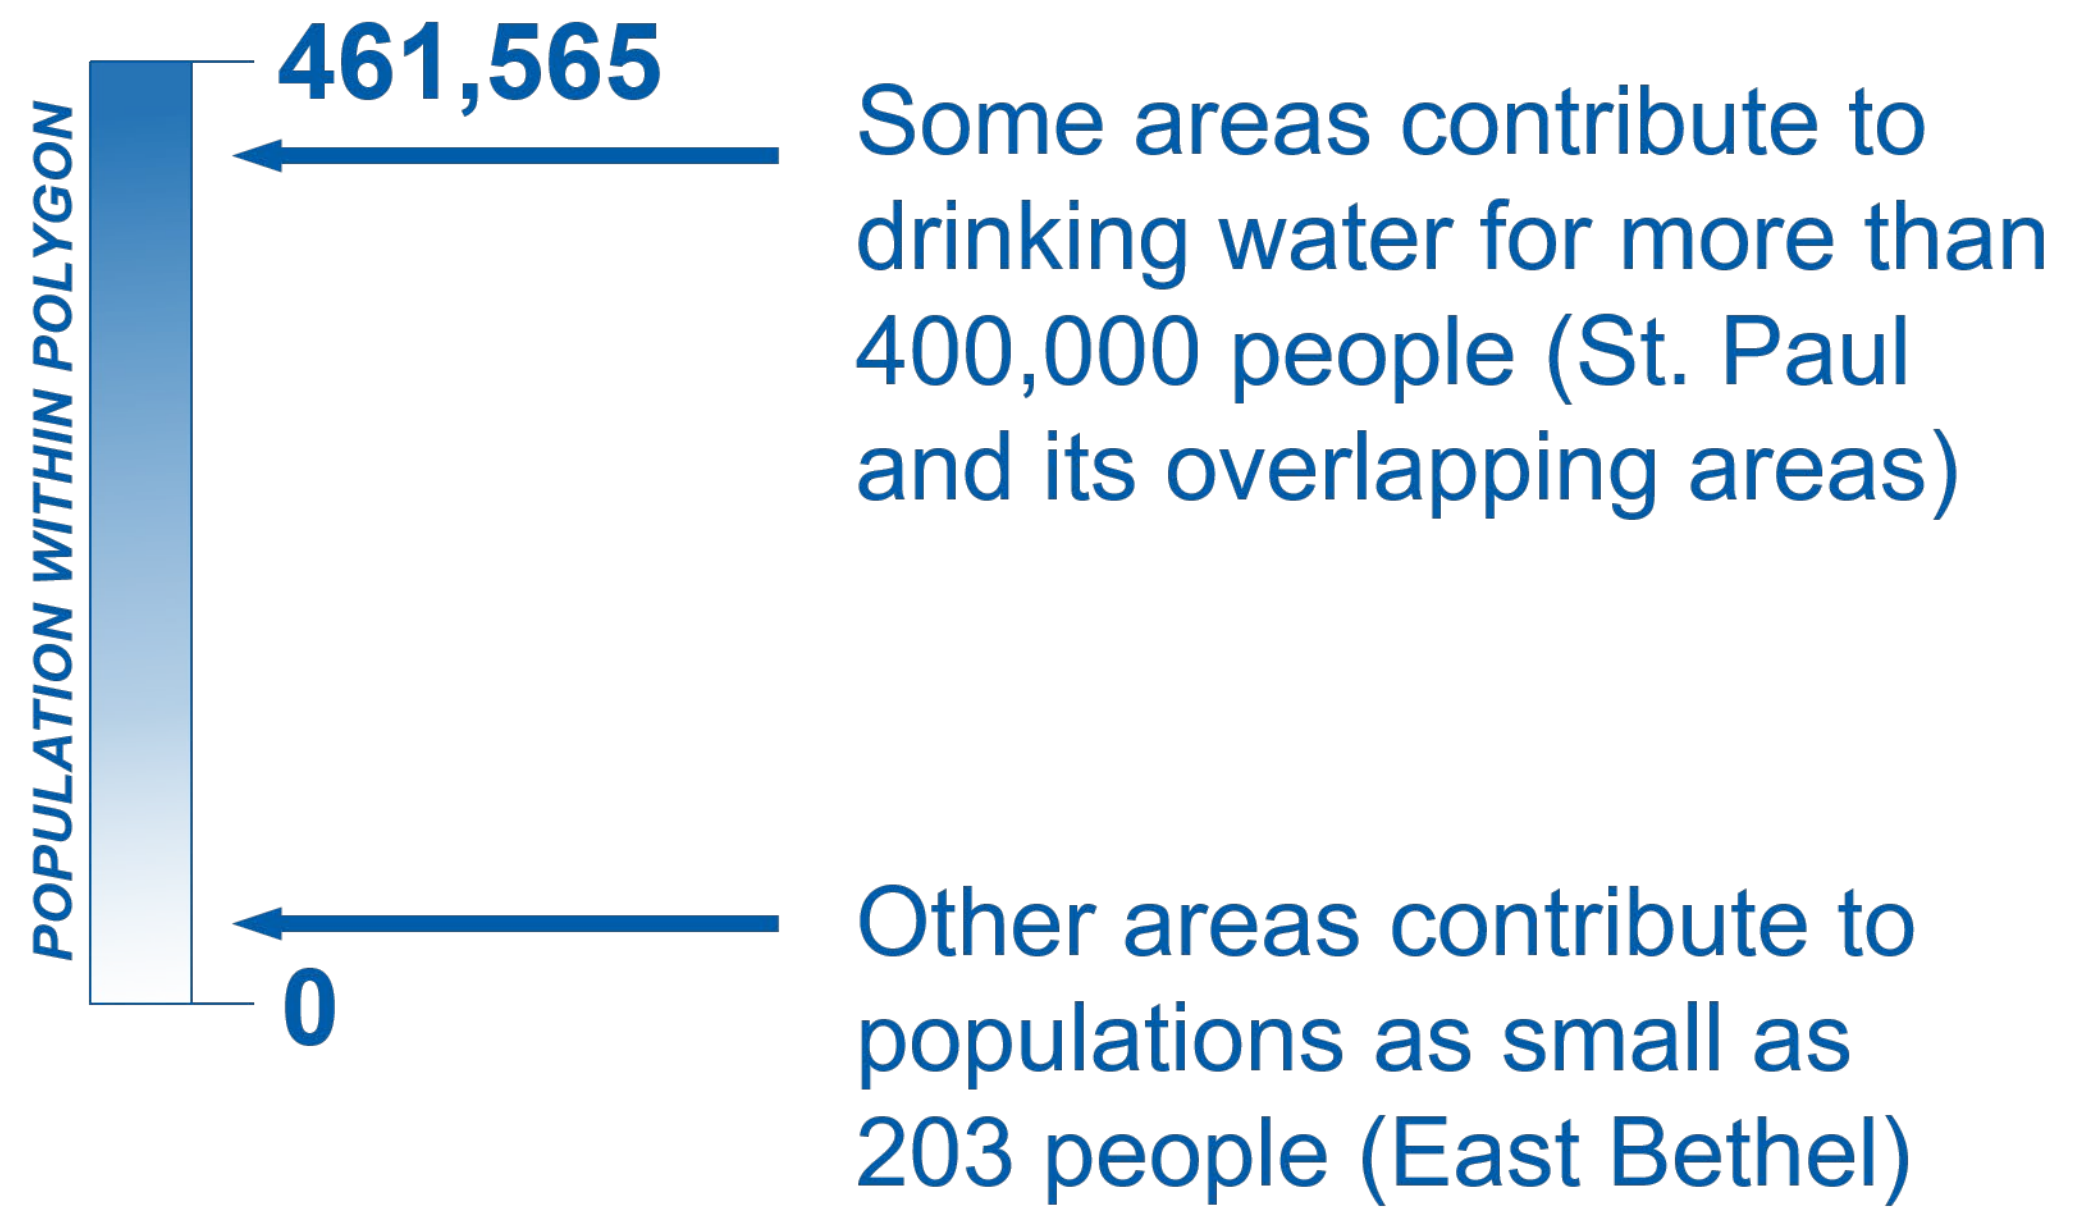

# TAC considerations for MAWSAC

- Consider the challenge of promoting consistent approaches to land use for water supply protection across communities, given that land use control lies with each individual city.
- Recognize how regional and local economic forces impact land use decisions. Different parties need to be present in the discussions and recommendations (ex: land use planners, developers, etc.).
- It is important that proposed approaches and recommendations be more specific.
- Input provided to revise draft problem statement, goal and proposed actions

# Land Cover and Associated Potential Contaminant Sources

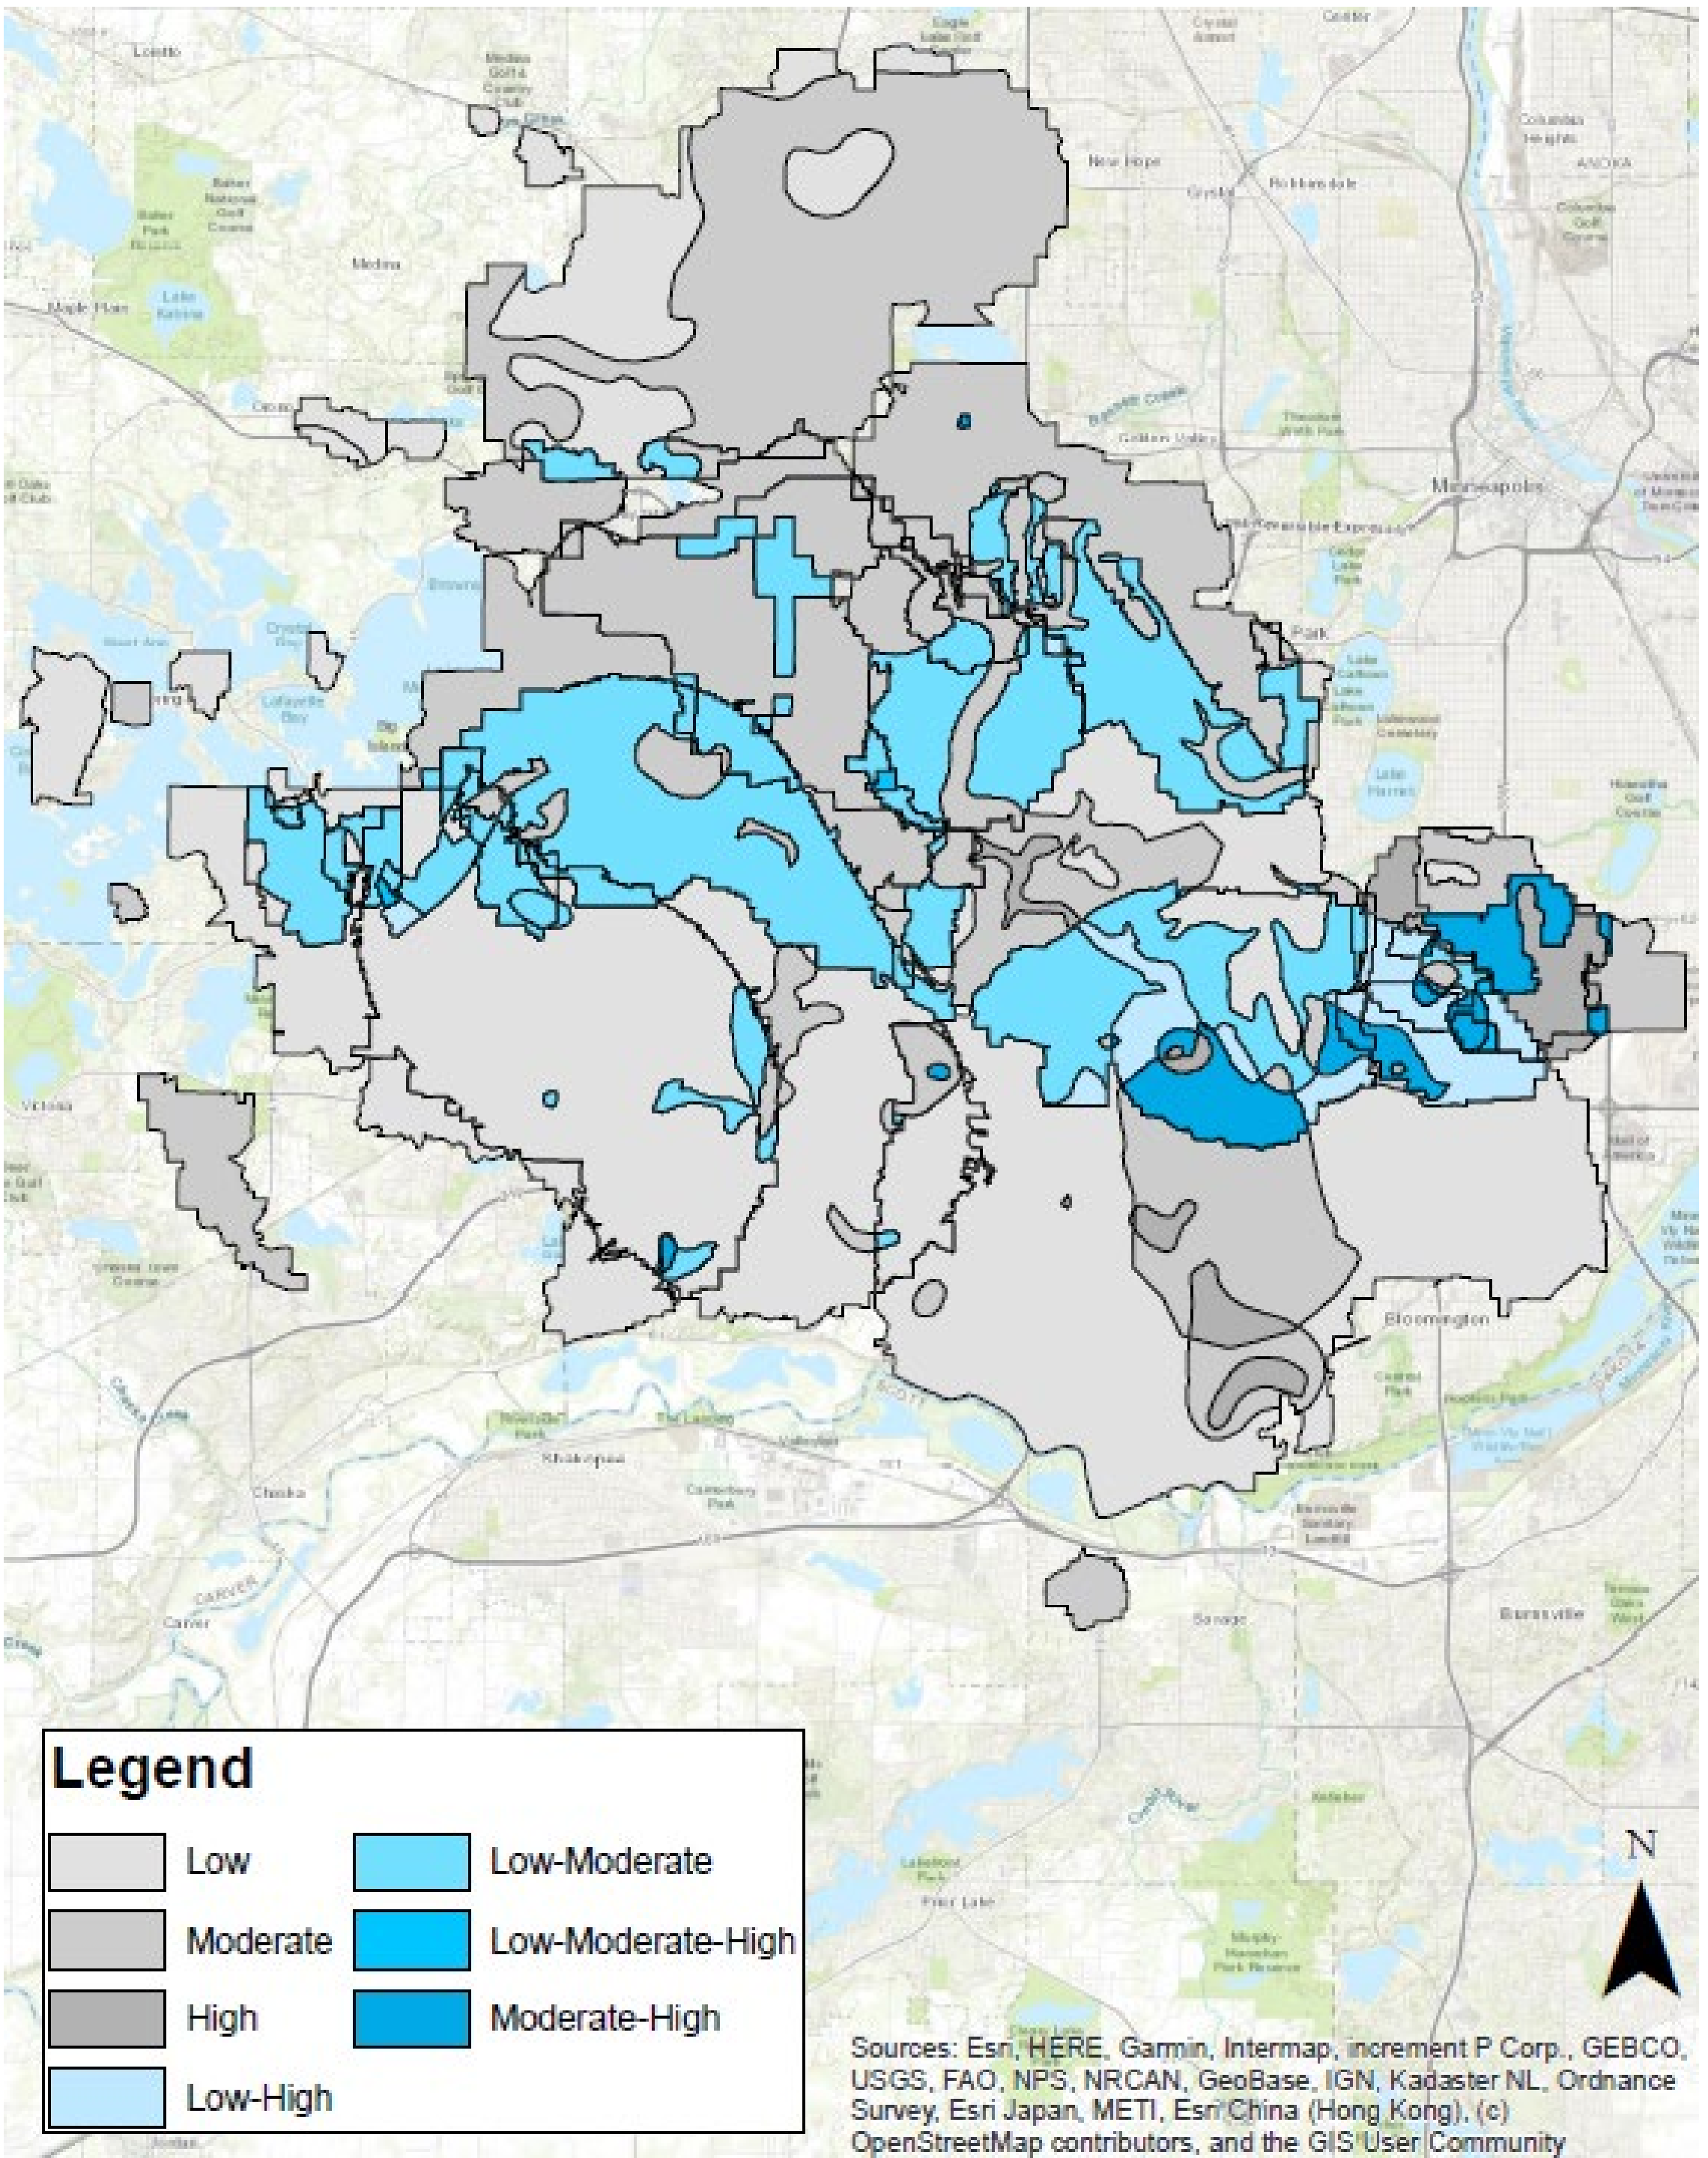

LAND COVER	POTENTIAL CONTAMINANT SOURCE
<i>Forest</i>	<ul style="list-style-type: none"> <li>At this time, there are no potential contaminate sources identified</li> </ul>
<i>Barren land</i>	<ul style="list-style-type: none"> <li>Mining, pit (aggregate), stormwater runoff</li> </ul>
<i>Wetlands and Open Water</i>	<ul style="list-style-type: none"> <li>Stormwater runoff, road or rail crossing over water</li> </ul>
<i>Hay/Pasture/Cultivated Crops</i>	<ul style="list-style-type: none"> <li>Land application, nutrient application/management, feedlots, storage and preparation areas</li> </ul>
<i>Developed - Open Space</i>	<ul style="list-style-type: none"> <li>Wells, septic systems, turf management, chemical application and storage</li> </ul>
<i>Developed - Low and Medium Intensity</i>	<ul style="list-style-type: none"> <li>Wells, septic systems turf management, chemical application and storage, stormwater basins/drains/infiltration, stormwater runoff, above ground storage tanks, class V wells, transportation corridor</li> </ul>
<i>Developed - High Intensity</i>	<ul style="list-style-type: none"> <li>Wells, septic systems turf management, chemical application and storage, stormwater basins/drains/infiltration, stormwater runoff, above ground storage tanks, class V wells, transportation corridor, road and rail crossings (spills over water), solid waste management site, pipeline, gravel pit, suspected contaminant of concern, hazardous waste handler and/or generator</li> </ul>

# Source Water Protection Areas: Groundwater Supplies

Analysis and Map Design by Henry McCarthy (Feb. 2020), Water Supply Planning and Analysis Intern, MCES ; Data Sources: Minnesota Department of Health (for DWSMAs), 2016-2018 Local Water Supply Plans submitted as of November 2019, SDWIS

# Overlapping Source Water Protection Vulnerability Assessment & Implementation

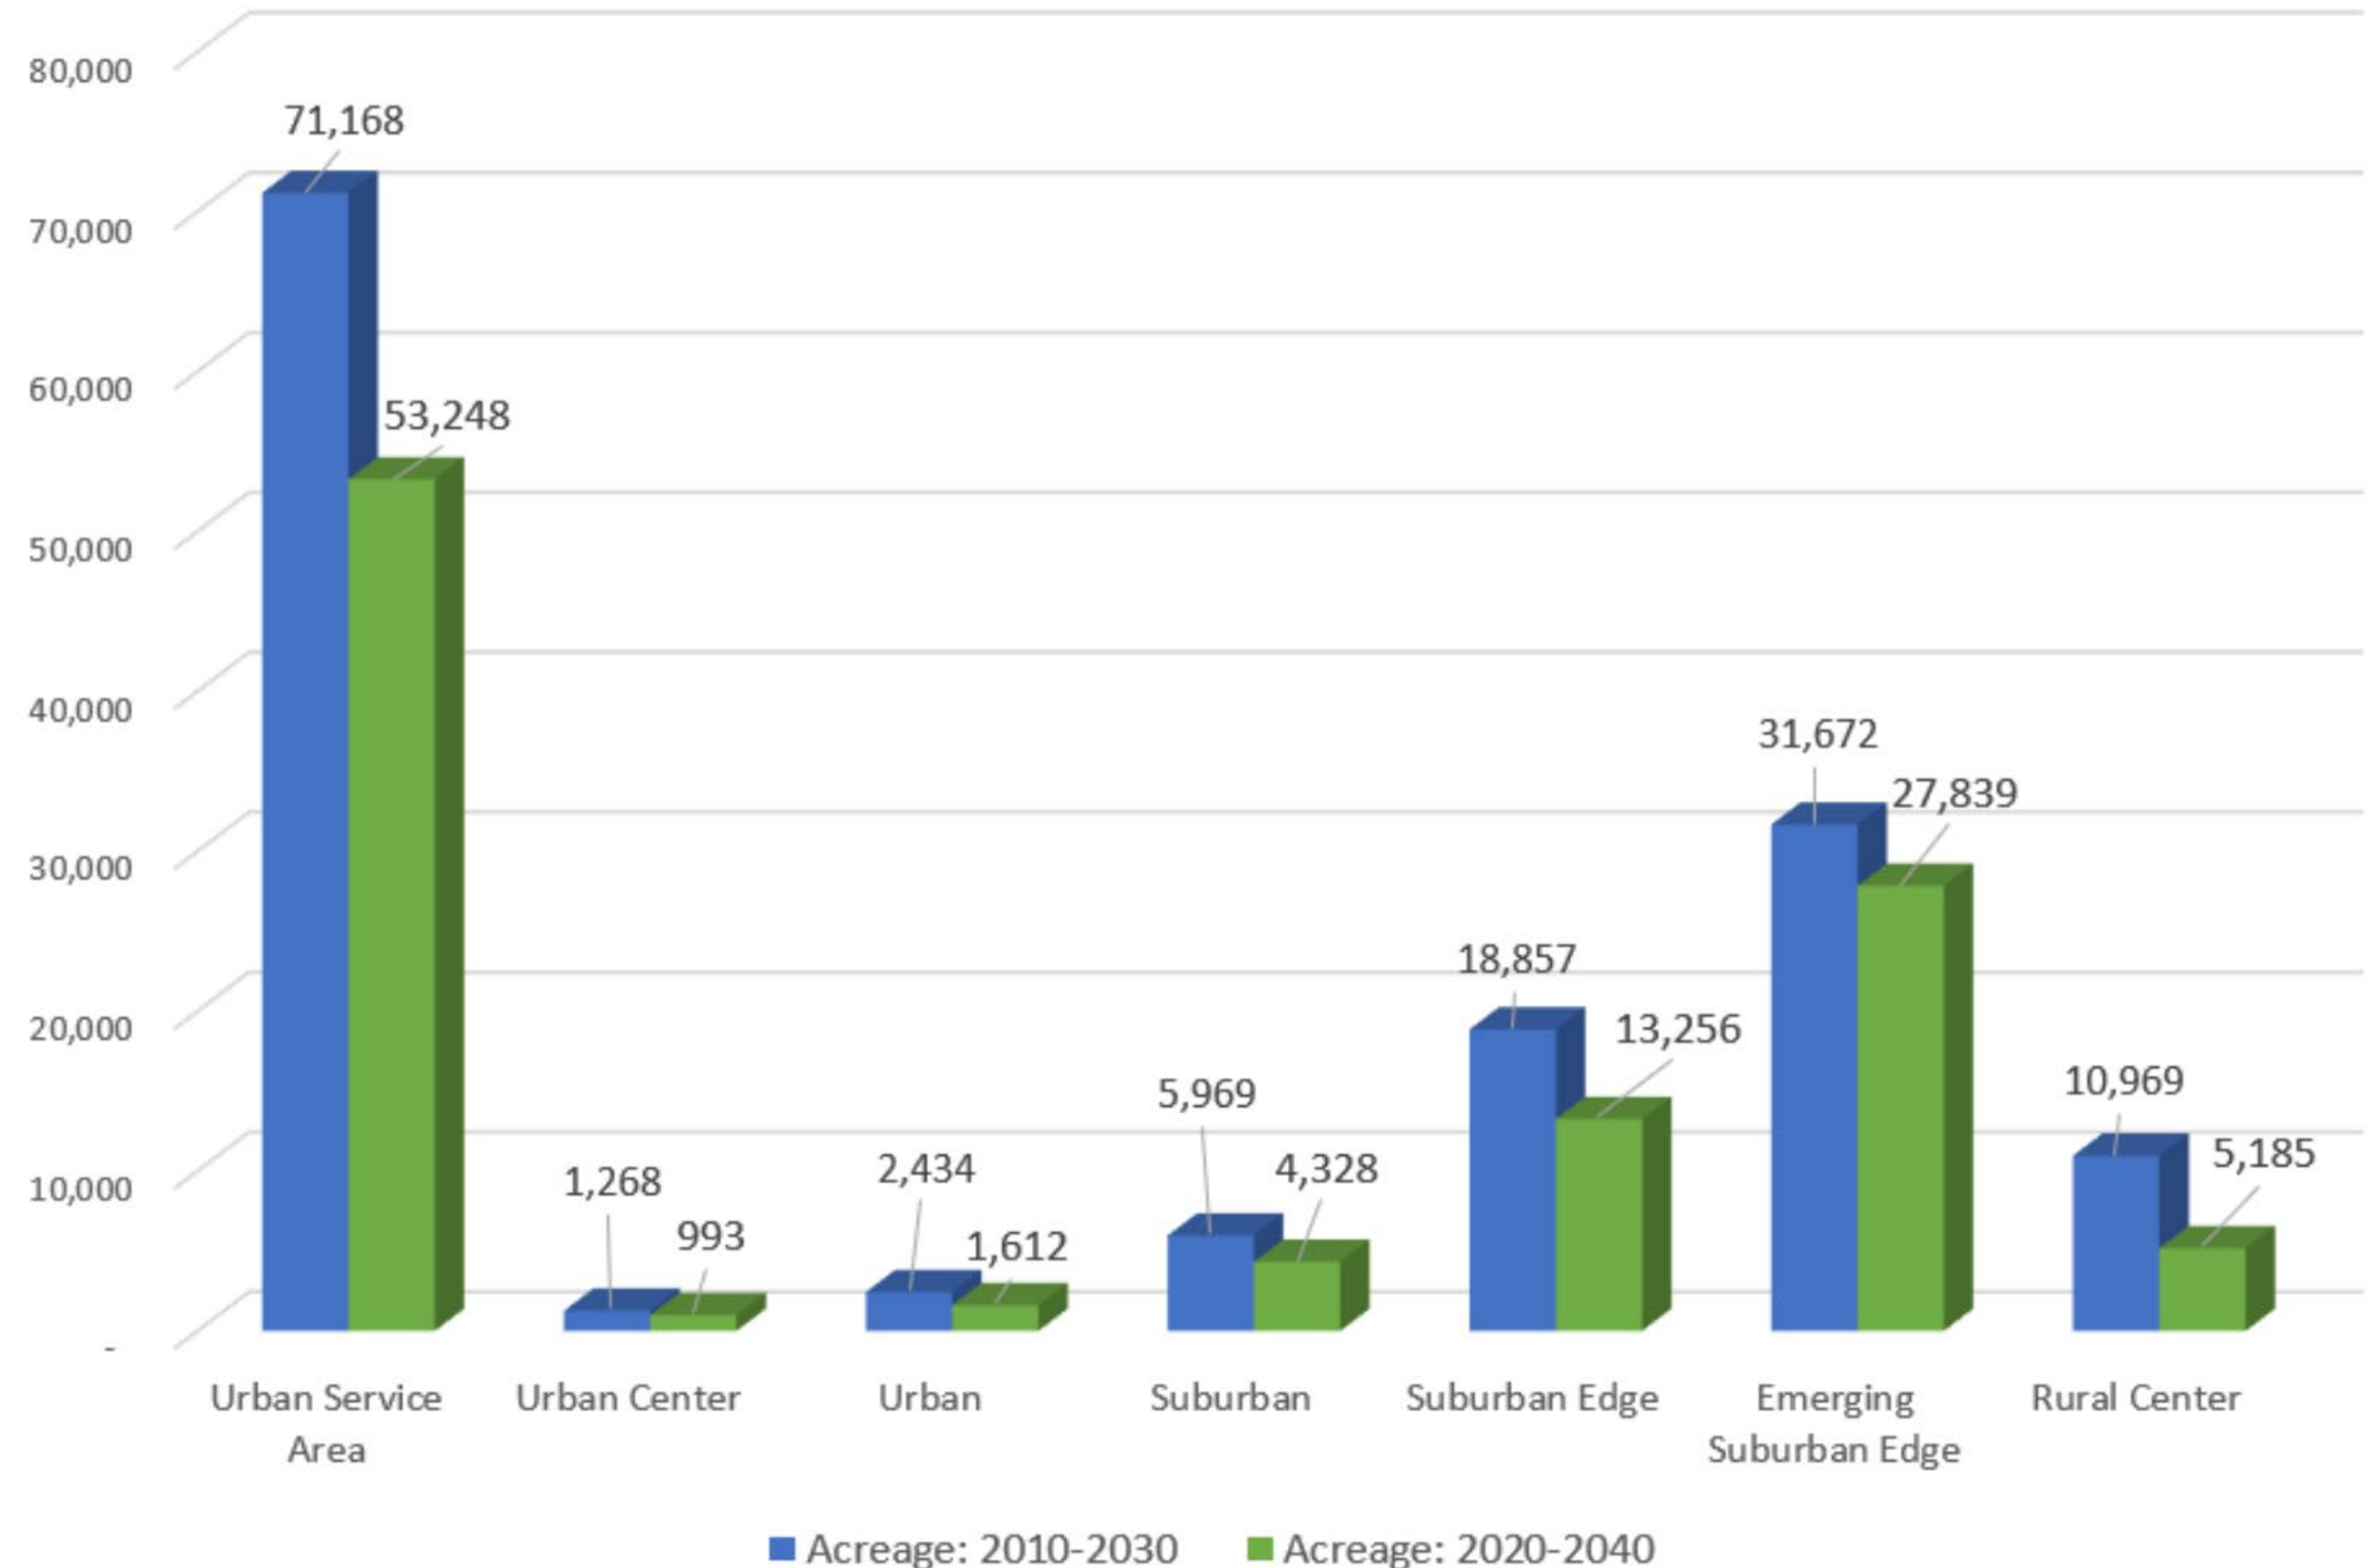

# Land Supply Comparison: Comp Plan Analysis

To hear the presentation that this slide came from:

[Agenda - Metropolitan Council \(metro council.org\)](#)

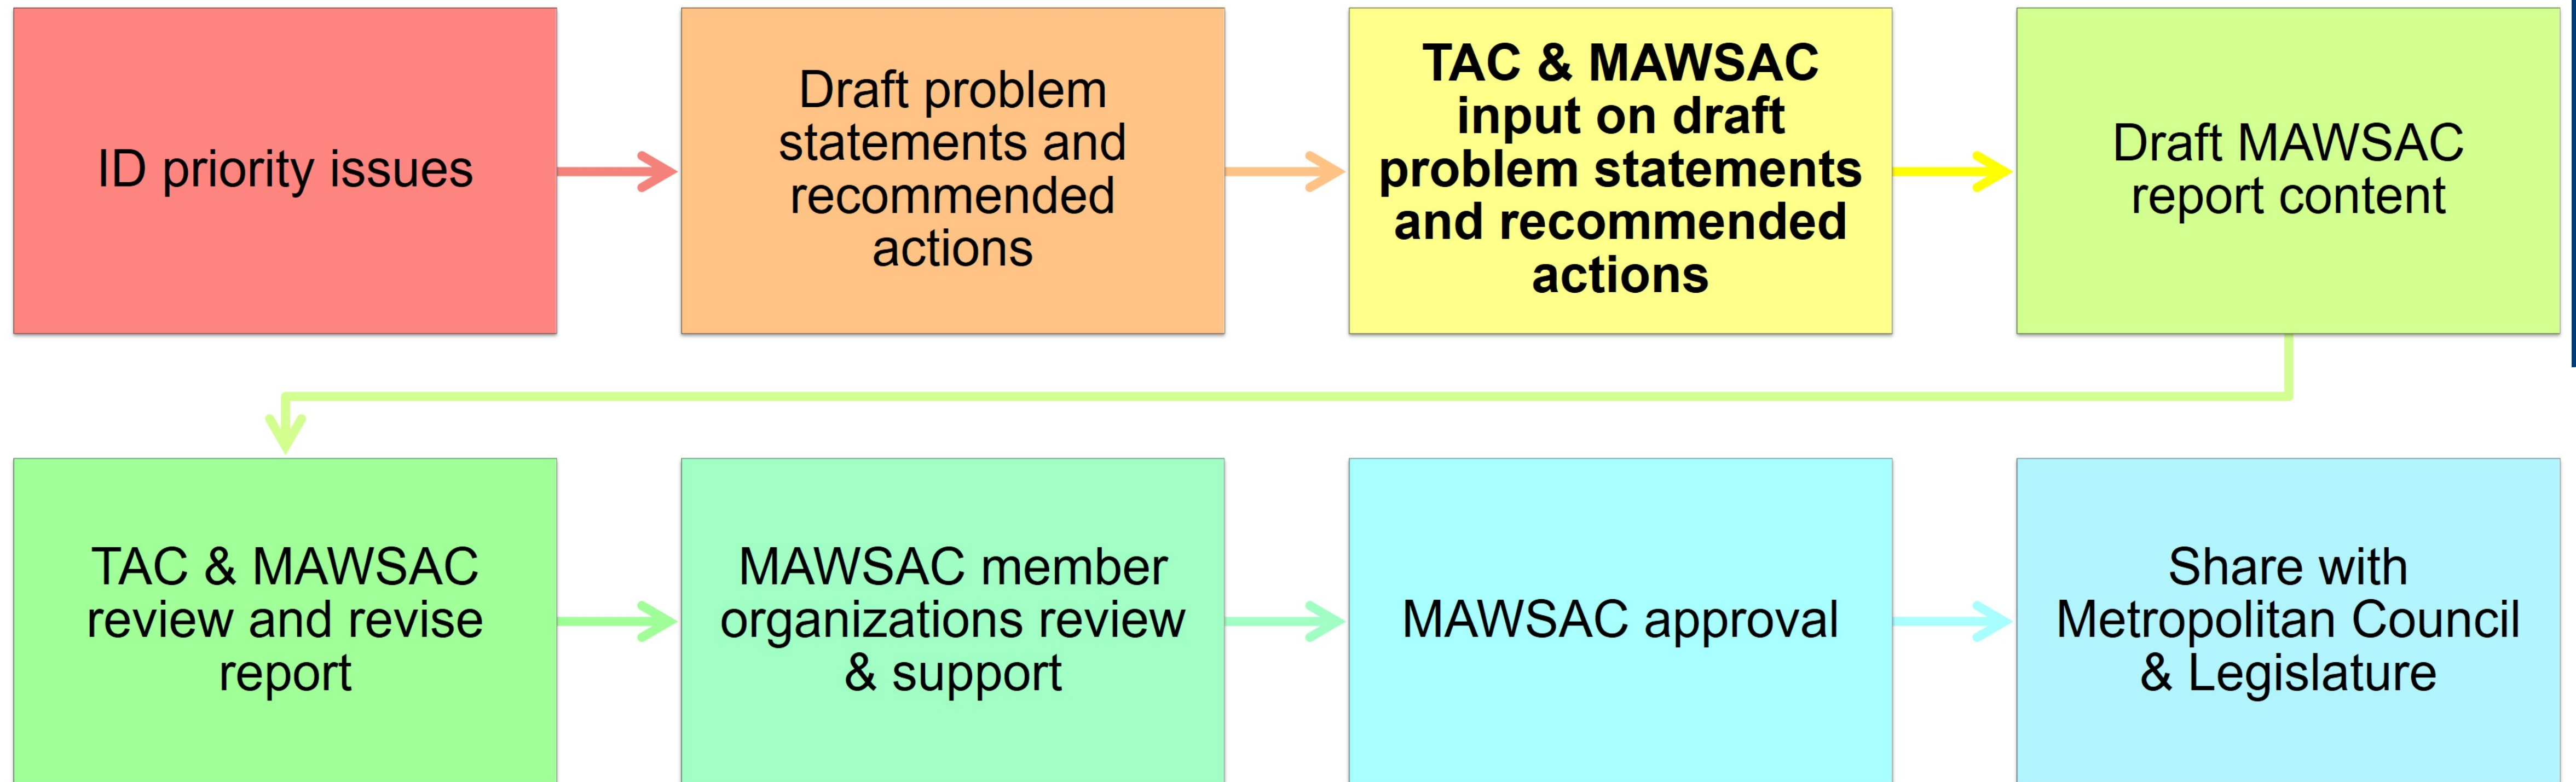

# Local experiences – food for thought

- **Collaborating around source water protection** – Valerie Grover, Dakota County
- **West Metro WHPP Pilot** – Emily Steinweg, Metropolitan Council
- **Source Water Protection Implementation** - Lisa Vollbrecht, Saint Cloud

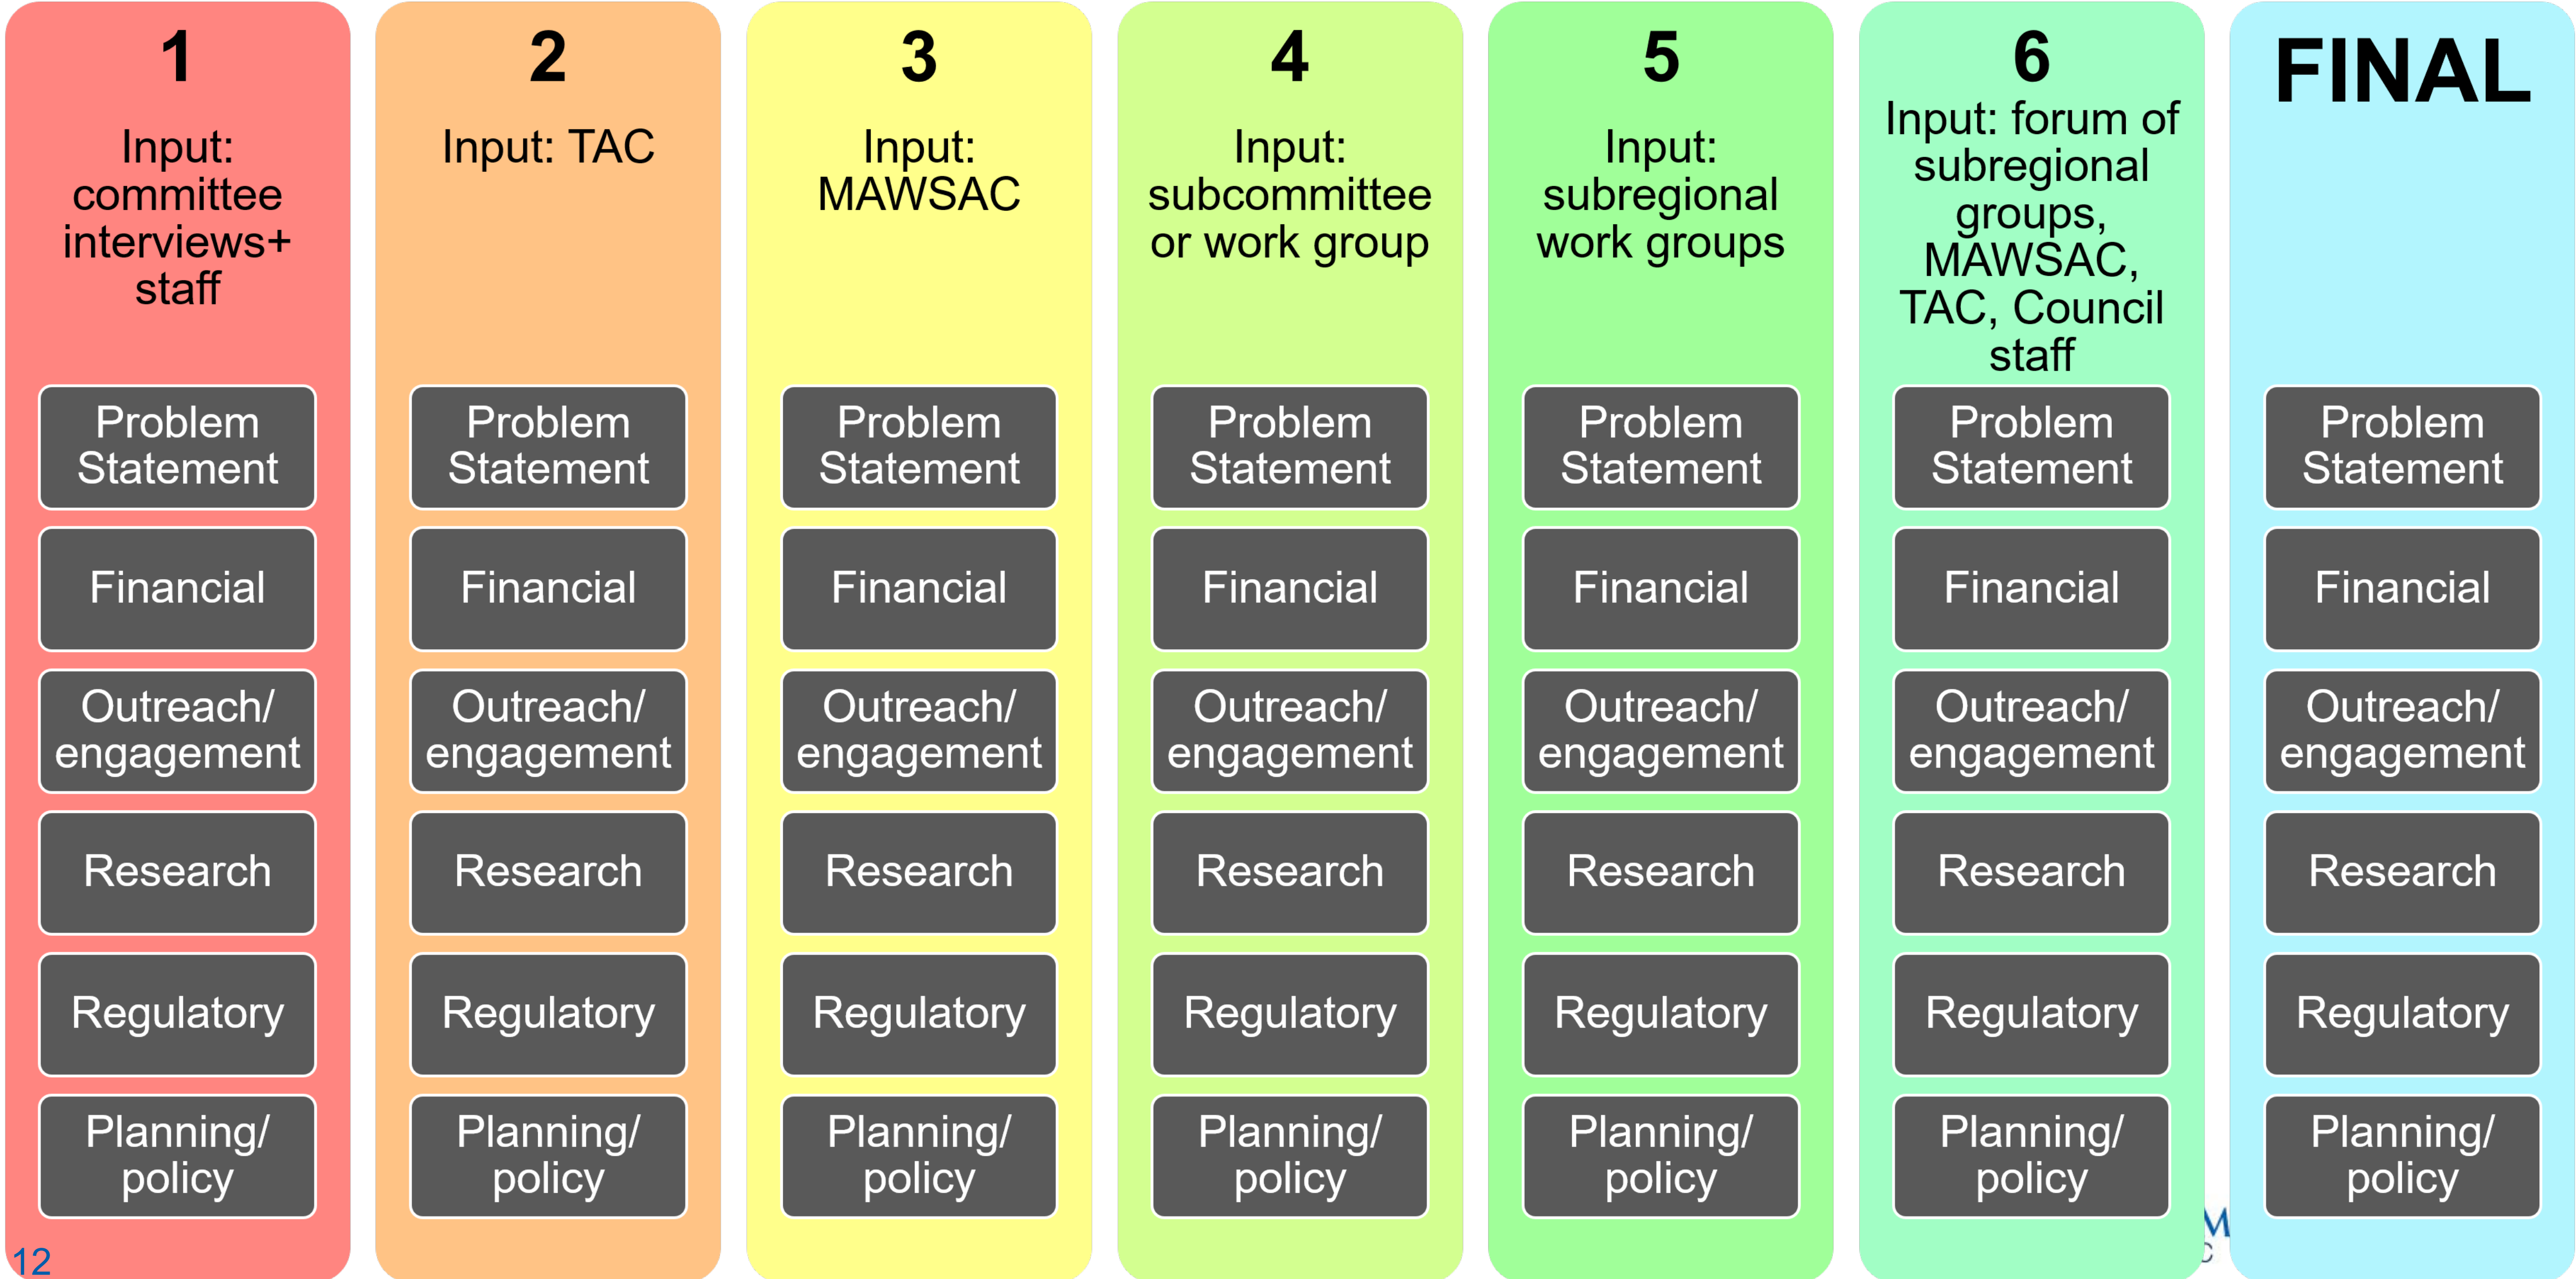

## QUESTIONS

1. What was the problem or challenge, and what impacts were most concerning?
2. What trade-offs or tensions shaped the work?
3. What resources were needed to do this work? Financial or other?
4. Who are key stakeholders/partners and what outreach is effective? Any gaps?
5. How could the Council and/or organizations represented on TAC help?

# Approach to 2022 MAWSAC report

# Process to develop and revise language
