

Resources Committed to Help Implement the Metro Area Water Supply Plan

Background

The updated 2050 Water Policy Plan and Metro Area Water Supply Plan commit the Met Council and partners to water supply planning work

- Staff available for project management, collaboration support
- Local planning assistance tools available
- Clean Water Fund appropriation requests
- Support for new and continued partnerships

Metro Area Water Supply Plan Table 3.2

Regional actions that Met Council commits to support

- Collaboration and capacity building
- System assessment
- Mitigation measure evaluation
- Planning and implementation

Metro Area Water Supply Plan Subregional Chapters

Subregional actions that Met Council commits to help local partners work on

The outcomes from subregional engagement workgroups—often in their own words—are included in the subregional action plans in this section. While the plans as they stand will guide the Met Council’s water supply planning work in each of these subregions, many of the actions will be ones that subregional work groups take on themselves, and they are expected to evolve over time as new issues and opportunities emerge.

The Met Council will help:

- Bring the right people to the table,
- Facilitate work planning, and
- Amplify requests for resources.

Next steps

The Met Council will continue to work with MAWSAC, TAC and other state and local partners to identify, prioritize, and scope projects and secure resources for implementation:

- Continue to refine work plans for regional projects
- Relaunch subregional engagement work
- Request Clean Water Fund support for implementation work

Thank You

Jen Kostrzewski
