

**Metropolitan Council:
Regional Parks System Visitor Study Report**

November, 2016

Table of Contents

Contents

Background, objectives and methodology	3
Total respondents by agency and sample demographics summary	4-6
Key findings	7-9
Summary of significant differences by agency and demographics	10-15

Detailed findings

- Activities	17-23
- Frequency and length of visits.....	24-40
- Experiences.....	41-57
- Information behavior.....	58-63
- Distances and transportation	64-69

Appendices

- Appendix A: Demographics	71-75
- Appendix B: Methodology	76-80
- Appendix C: Weighting and Agency Weights	81-90

Background, Objectives and Methodology

Background

Metropolitan Council contracted Information Specialists Group, Inc. (ISG) to fulfill sample planning, fielding, analysis and reporting for the 2016 Regional Parks and Trails Visitor Survey for the Metropolitan Council.

Learning Objectives

- Provide benchmark measurement of regional park and trail visitor experiences in terms of:
 - Reasons for visiting and activity participation
 - Frequency and length of visits
 - Travel distances and modes of transportation
 - Group sizes
 - Quality of facilities, services and recreation opportunities and sense of safety
 - Information behavior

Fielding Methodology

Metropolitan Council provided a survey instrument of approximately five to 10 minutes in length, that was fielded at all regional park and trail units within the 10 regional park implementing agencies between May 30 and September 5, 2016. A total of 65 parks and 52 trails are included in the sample. The survey was conducted by professional interviewers employing a live intercept method. Strategic intercept scheduling ensured that all agencies received appropriate coverage across the season, days of week and times of day.

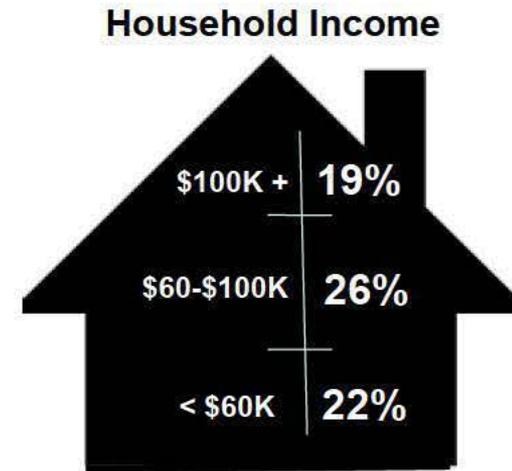

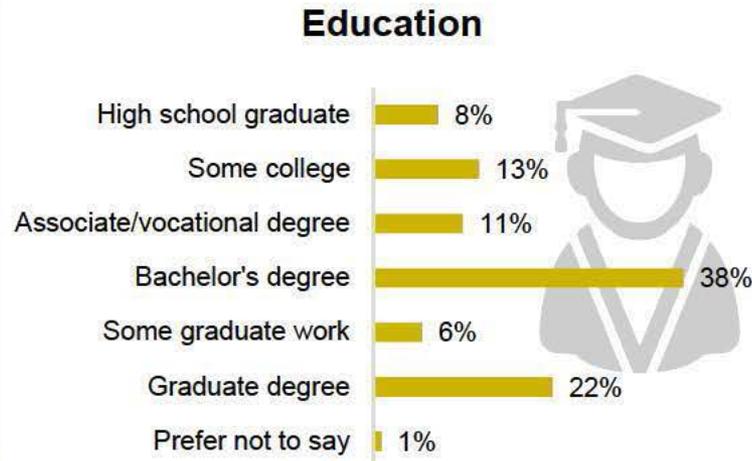

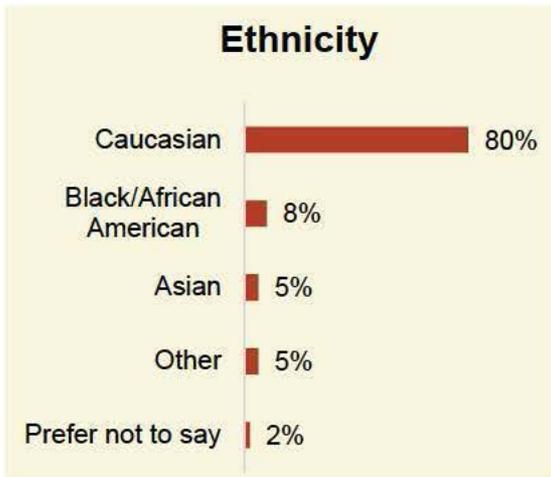

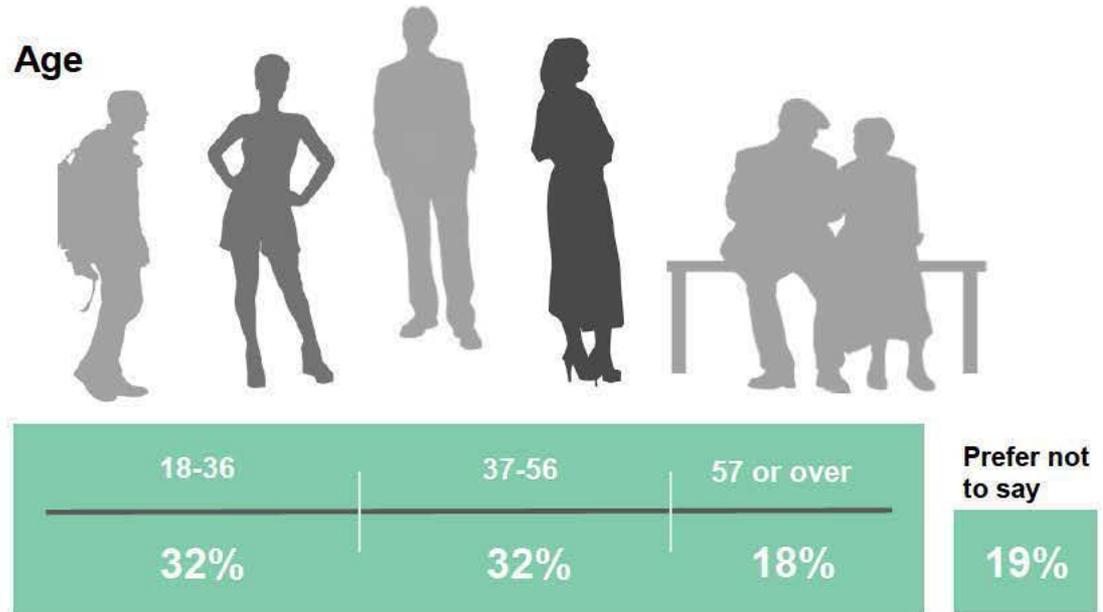

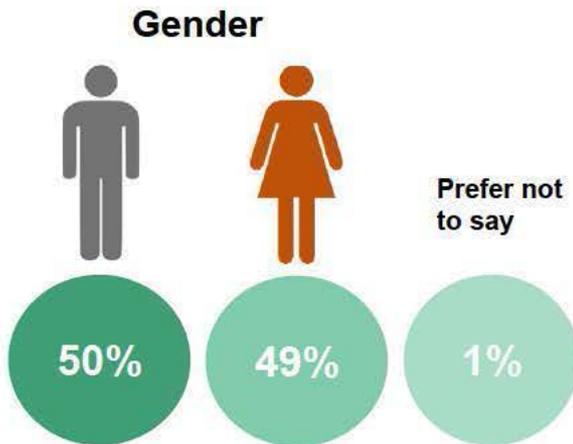

For analysis purposes, the number of completed surveys for each agency is weighted so that each agency is statistically representative of their respective proportion of summer visits within the overall system, as reported in 2015 Annual Use Estimate of the Regional Parks System: <https://metrocouncil.org/Parks/Publications-And-Resources/PARK-USE-REPORTS/2015-Annual-Use-Estimate-of-the-Regional-Parks.aspx>. **Additional details on methodology, statistical testing methods, weighting and agency level weight tables can be found in the Appendix.**

Respondents

Survey Completes Per Agency: UNWEIGHTED TOTALS

Agency	Number of Survey Completes			
	Parks		Trails	Total
Anoka County	407		251	658
City of Bloomington	385		NA	385
Carver County	126		268	394
Dakota County	273		116	389
Minneapolis Park and Recreation Board	376		310	686
Ramsey County	286		201	487
City of Saint Paul	320		71	391
Scott County	253		132	385
Three Rivers Park District	689		606	1295
Washington County	312		77	389
Totals	4009		1450	5459

Respondent Summary: Unweighted Demographics

Key Findings

Key Findings

- **Hiking, walking and biking are the most popular activities.** They are also the most commonly mentioned **primary reason** for visiting a regional park or trail.
 - Dakota County agency has the most breadth of activity participation, with significantly higher participation in eight of 13 activities measured.
 - Ramsey County, Scott County, Three Rivers Park District and Washington County agencies have the narrowest participation, with significantly lower participation in six or more of the 13 activities measured.
- **Visitors are either very loyal to their park or trail, or simply prefer familiar surroundings.** Most respondents (89%) had visited the park or trail where they were surveyed before and visit it fairly regularly, as demonstrated by:
 - **Frequency:** Visitors average 56 visits per year (52 parks and 68 trails) and 19 visits in summer (17 for parks and 22 for trails).
 - **Frequency satisfaction:** Four-fifths say they spend about the right amount of time visiting the park. Two-thirds (67%) of those who would like to spend more time say that not having enough time is the primary barrier.
 - **Length:** Visit length averages 1.74 hours, and visitors spend significantly more time in parks (1.84) than on trails (1.47).
 - Visitors spent more time when their primary reason for visiting was swimming, a special event, picnicking or fishing. They spent significantly less time when they came to hike, walk, jog or run.
- **Few gathered outside information about their destination prior to visiting.** More than four-fifths (86%) did not obtain any outside information prior to visiting. The most frequently used information resource is previous personal knowledge, which may serve as further evidence of loyalty to the most familiar parks or trails. The most popular outside information sources are family and friends (36%), park or trail websites (16%) and other internet sources (13%).
- **Overall, visitors are satisfied with facilities and feel safe.** Nearly all (95%) gave the regional park or trail they visited a rating of good or very good in terms of facility quality, services and recreation opportunities.
 - Those who were primarily there for socializing or a playground were significantly more likely to give this rating, while those visiting to bicycle or fish were significantly less likely to rate the location as good or very good.
 - Most (91%) said that they felt very safe during their visit.

Key Findings (Cont.)

- **Age, ethnicity and income have the most noteworthy impacts on usage and experiences.** Key distinctions include:
 - **Age:** Frequency of visiting increases directionally and significantly with age. Those under age 35 are significantly more likely to use family and friends, Google Maps or Facebook for information prior to visiting, and to use the park or trail for commuting purposes. Respondents age 35-54 are significantly more likely to use park websites. Visitors over age 55 visit significantly more often than other ages and are significantly more likely to rate facilities, services and recreational opportunities as good to very good.
 - **Race/ethnicity:** Caucasians visit significantly more often than non-Caucasians (60 vs. 36 times per year). They are also significantly more likely to rate facilities quality, services and recreation opportunities as very good and to say that they had no safety concerns during their visit. Caucasians are significantly more likely to walk, run or use inline skates to get to parks or trails and to use prior knowledge rather than outside information sources, while non-Caucasians are more likely to rely on family and friends for information. Non-Caucasians are also significantly more likely to participate in fishing, special events and picnicking activities than Caucasians.
 - **Household income:** Those with household incomes exceeding \$100,000 visited significantly more frequently than the lower income segments and had fewer safety concerns. They were also significantly more likely than those earning less than \$60,000 to use park or trail websites and to rate facility quality and recreation opportunities as very good. Those earning less than \$60,000 are significantly more likely to arrive using public transportation and to use parks or trails for commuting purposes.
- **Parks differ from trails in terms of usage and visitor demographics.** Key distinctions include:
 - **Parks:** The parks visitors indicated more socializing and larger groups of visitors of broader age ranges. Visitors travelled farther from home to get to parks (18 miles vs. 8 miles for trails), were more likely to look for information prior to visiting and indicated a wider variety of activity participation.
 - **Trails:** Visits to trails were significantly more solitary (63% go alone vs. 45% for parks). Trails had a higher frequency of visits across seasons and significantly higher summer visits than parks, but less time spent per visit.
- **Very few were limited by a physical or mental condition.** Just 3% said that a member of their group had a physical or mental condition that could impact their participation in activities. Of those impacted, 97% cited a mobility issue.

Significant Distinction Summaries: Agency and Demographics

Significant Agency Distinctions

- Statistically significant distinctions by agency include:

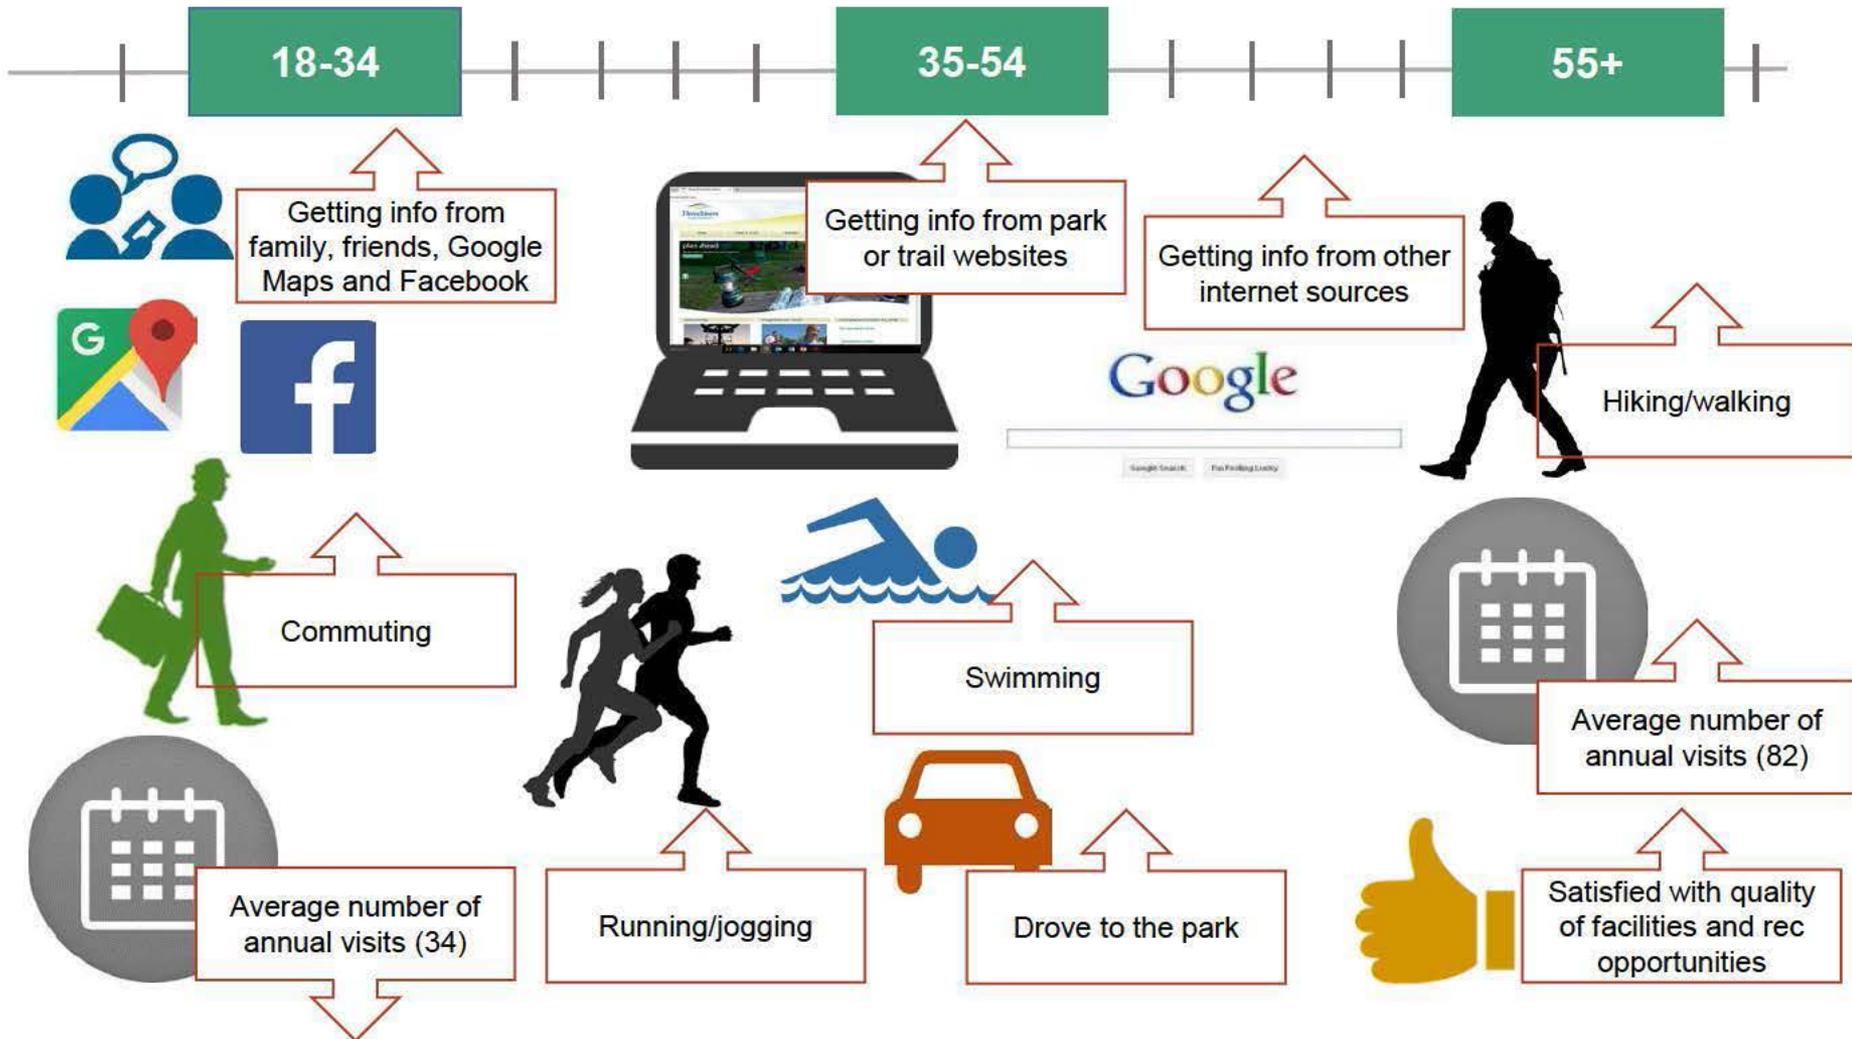

Anoka County	City of Bloomington	Carver County	Dakota County	Minneapolis Park and Recreation Board
Arrived in an automobile and more likely to rely on previous knowledge than outside information sources	Arrived in automobile and travelled farther from home	Closer to home and less likely to have looked for information prior to visit, more likely to rely on previous knowledge than outside information sources	More likely to have looked for information prior to visit and arrived in an automobile, more likely to rely on previous knowledge than outside information sources	Less likely to have arrived in an automobile
Brought kids age 11-18	Brought kids under age 18	Brought kids under age 10 and reported a larger average group size	Brought kids under age 10	Strongest and broadest use of outside information sources
Brought a pet	Larger group sizes	Feel safe	Longer visits and the most breadth and diversity of activities	More likely to be African American/black
Longer visits but fewer total visits	Broader primary reasons for visiting	Longer visits and more likely to have visited 60+ days in past year	Likely to say they spent more time than they'd prefer	
Less likely to say the quality of facility, services and recreation opportunities is good to very good	More likely to say that they spent more time than they prefer and that lack of time is the primary barrier to going more	Lack of time is the primary barrier to going more	More likely to have a household income of \$150K or higher and Caucasian	
Less likely to have a household income over \$150K and more likely Caucasian	More likely to have a household income of \$150K or more and Caucasian	More likely to have a household income of \$200K or more and Caucasian		

Significant Agency Distinctions (Cont.)

Ramsey County	City of Saint Paul	Scott County	Three Rivers Park District	Washington County
Closer to home	Shorter visit length and lower reliance on outside information sources	Arrived in an automobile and lower reliance on outside information sources	Closer to home and more likely to rely on previous knowledge than outside information sources	Closer to home, more likely to have arrived in an automobile and more likely to have looked for information prior to visiting, but lower use of most outside information sources
Brought a pet	More likely to be Asian or "other" race/ethnicity	Brought a pet	Brought kids under age 10	Brought kids under age 18 and reported a larger average group size
Shorter visit length and less breadth of activities		More likely to have visited the park or trail before and more likely to have visited 60 times or more in the past year	Lower breadth of activity participation but broader range of primary reasons for visiting	More likely to say that quality of facilities, services and recreation opportunities is good or very good
		Shorter visit length and less breadth of activities	More likely to have visited 60 times or more in the past year	Longer visit length but narrower range of activity participation
		More likely to say they spent more time than they'd prefer and that family obligations are the primary barrier to more visits	More likely to have a household income of \$200K or higher and Caucasian	More likely to say they spent more time than they'd prefer and to say that no free time is the primary barrier to visiting more often
		More likely to have a household income of \$200K or higher and Caucasian		

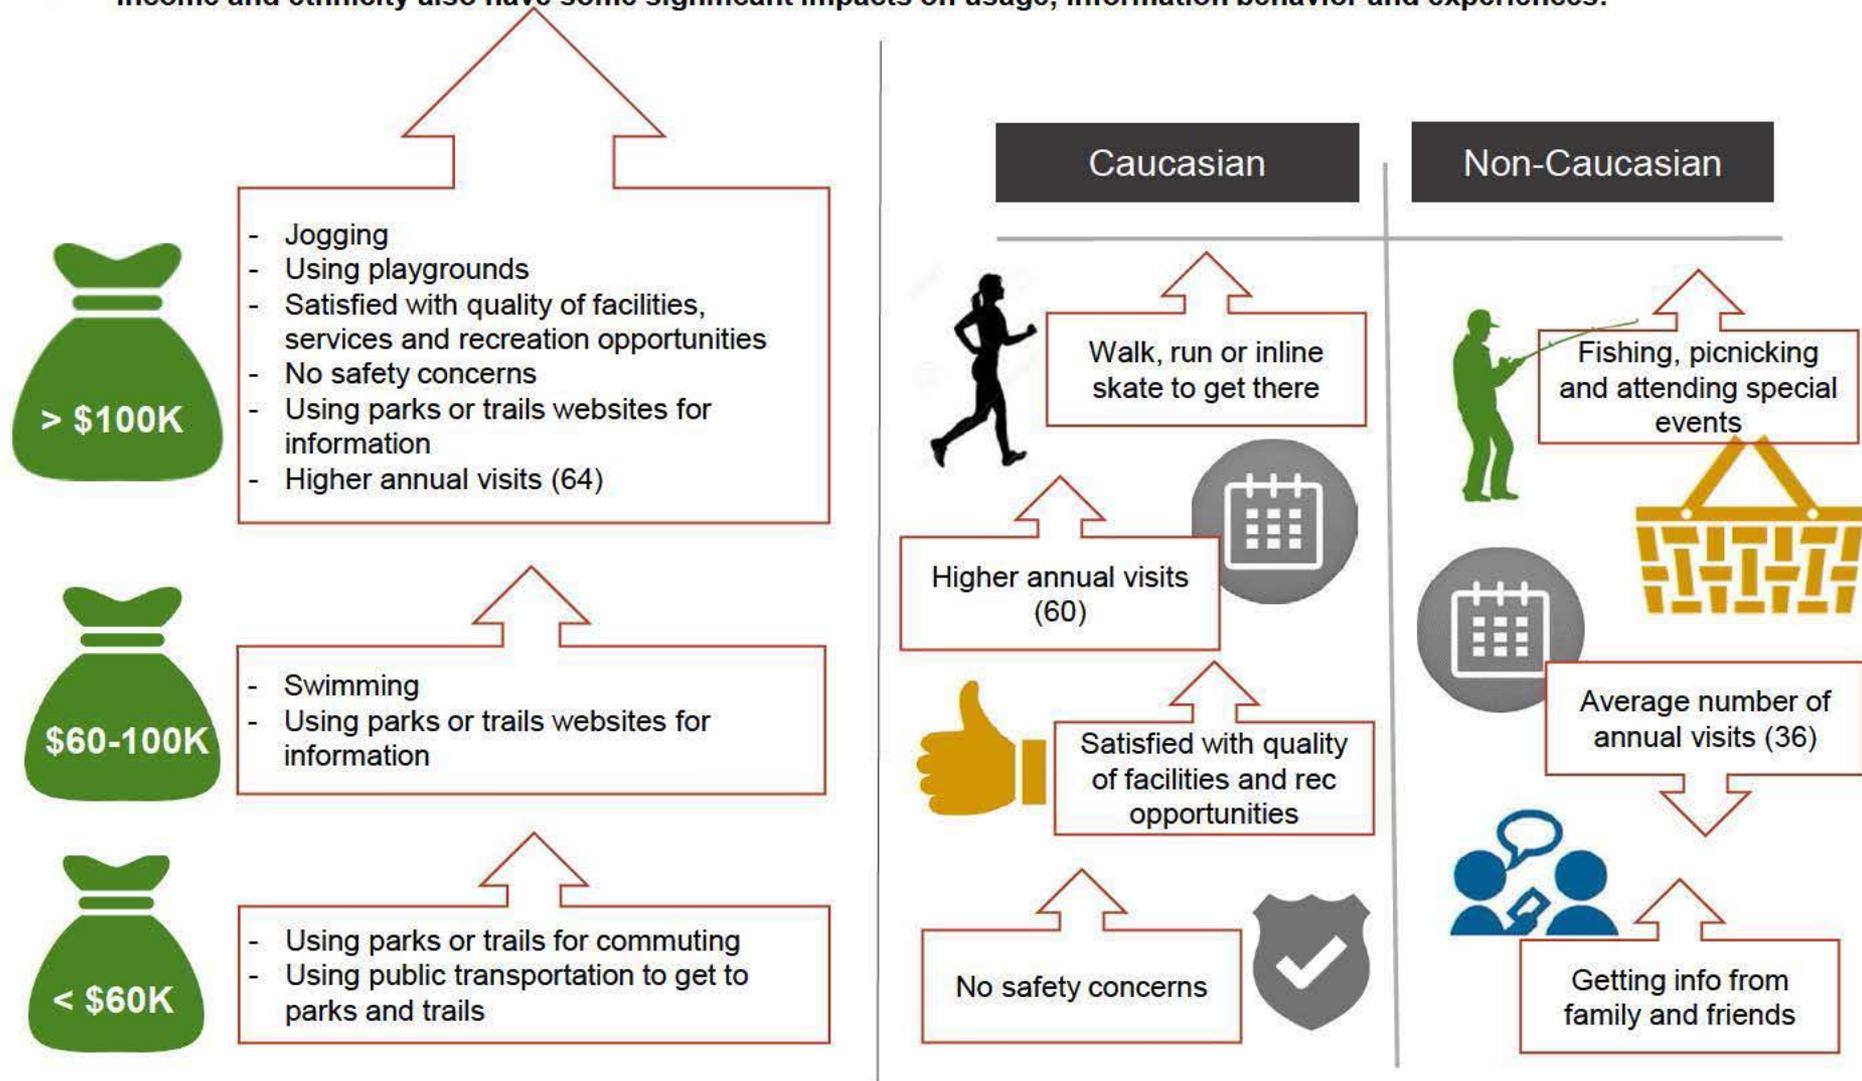

Significant Demographic Distinctions: Age

- Age has significant impacts on information behavior, activities, frequency of visiting and satisfaction:

Significant Demographic Distinctions: Income and Ethnicity

- Income and ethnicity also have some significant impacts on usage, information behavior and experiences:

Visit Frequency Distinctions by Season

- At the agency level, Scott County stands out for significantly higher visits across three seasons, while Anoka County, City of Bloomington and Washington County exhibit significantly fewer visits in at least three seasons.

				
Visits Relative to TOTAL Sample				
Significantly Higher Visits	<ul style="list-style-type: none"> - City of Bloomington - Carver County - Dakota County - Scott County - Three Rivers Park District 	<ul style="list-style-type: none"> - Scott County 	<ul style="list-style-type: none"> - Scott County 	<ul style="list-style-type: none"> - None

Activities Participation

Compared to the total, the Dakota County agency has significantly stronger activity participation across eight of the 13 categories measured. Carver County, Scott County, Ramsey County, Three Rivers and Washington County each have significantly lower levels of activity across six or more activities. Carver County, Scott County, Three Rivers and Washington County agencies have significantly lower levels of participation in the most popular activity of hiking and walking.

Q2 - Which one of the above activities was your primary reason for visiting this [Park/Trail]?

Frequency and Length of Visits

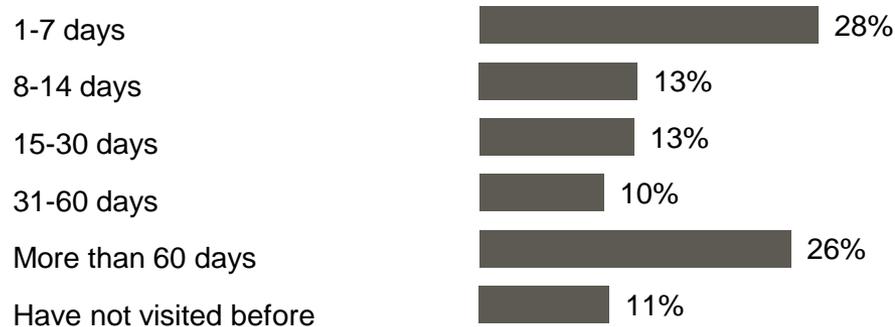

Visited Regional Park or Trail Before/Number of Visits in Past 12 Months

The majority of respondents (89%) had visited the regional park or trail before, with trail visitors significantly more likely than parks visitors to say so. Park visitors are significantly more likely to have visited the park seven times or fewer in the past year, while trail visitors are significantly more likely to have visited more than 60 days.

Visited Park/Trail Before

Number of Visits in Past 12 Months

Q9 - Which of the following best describes your feeling about the amount of time you have spent at this [Park/Trail] in the past 12 months?

Factors Limiting Visits to Regional Parks and Trails

Among those who indicated that they spent less time than they would prefer, lack of free time is the most common barrier preventing them from visiting regional parks and trails more often. Family obligations is significantly more an issue for trail visitors than park visitors, and distance is a significantly stronger challenge to park visitors.

Q11 - Including you, what are the age categories of the people in your group? (Percentage)

* Indicates a significant difference between park and trail totals

Age Categories of People in Group

Visitors to City of Bloomington, Carver County, Dakota County, Three Rivers Park District and Washington County agencies are significantly more likely than the total sample to be accompanied by children age 10 and under. Those surveyed in Minneapolis Park and Recreation Board, City of Saint Paul and Scott County agencies are significantly less likely to have young children with them.

Q7 - Prior to this visit, did you or your group obtain information about this [Park/Trail]?

Information Sources

Nearly half of respondents (49%) rely on their personal knowledge and experience as opposed to seeking outside information about regional parks and trails, and trail visitors are significantly less likely than park visitors to use outside sources for information. The most frequently mentioned outside information sources are family and friends, park or trail websites and other internet sources.

Q6 - When you obtain information about [Park/Trail], what are your most important information sources?

Information Sources by Demographics

Noteworthy demographic distinctions include:

- The youngest group is significantly more likely to rely on family and friends, Google Maps and Facebook.
- Those age 35-54 and those with household incomes of \$60,000 or more are significantly more likely to go to a park or trail website.
- Respondents over age 35 and visitors in the highest household income group are significantly more likely to use other internet sources.
- Caucasians are significantly more likely to rely on previous knowledge, while non-Caucasians are significantly more likely to use family or friends for information.

Information Sources	Total (n=5459)	Gender		Age Group			Ethnicity		Household Income

Q15A - How did you travel to this [Park/Trail] on your visit today? If two methods of travel, what is the dominant form of transportation you took to get here?

Primary Method of Travel

Females are significantly more likely than males to arrive in some form of automobile, as are visitors age 35-54. Caucasians and those in the 18-34 and 55 or over age ranges are significantly more likely than those age 35-54 to walk, run or use inline skates to get to their destination. Visitors reporting a household income under \$60,000 are significantly more likely to have used public transportation.

Primary Method of Travel	Total (n=5459)	Gender		Age Group			Ethnicity		Household Income

Q21 - Which of the following best describes your total household income from all sources before taxes last year?

Appendix B: Methodology

Methodology

Fielding Methodology

Metropolitan Council provided a survey instrument, of approximately 10 minutes in length, which was fielded at all regional park and trail units within the 10 agencies. The survey was administered by live intercept method, with professional interviewers recording visitors' responses on electronic tablets. Surveying took place between May 30 and September 5, 2016.

Quality assurance measures involved quality assurance managers routinely and randomly visiting interviewers on-site. All interviewers were also required to randomly check in through a GPS tracking application installed on their tablets.

Metropolitan Council supplied a sampling strategy and fielding methodology guidebook titled "Handbook for Minnesota Parks and Trails Surveying," authored by University of Minnesota. This year marks the first time implementing this study design. Although significant effort was made to adhere to as many of the fielding instructions outlined in the handbook as possible, there are several directives that were considered unduly restrictive, and if followed as prescribed would have made the study fulfillment impossible and/or cost prohibitive for Metropolitan Council. Some modifications were made prior to fielding in accordance with assumptions expressed in the original RFP (prior to finalization and release of the Handbook). After a period of testing the methodology in field, ISG recommended and received permission to make additional changes to improve production and efficiency without compromising the study integrity.

Methodology (Cont.)

Methodology Modifications

Modifications made to the original methodology can be summarized as follows:

Aspect of Study Design	Handbook Instruction Summarized	Modified Approach Summarized
Sampling Plan	Required randomized scheduling at the week, day, time-part and survey block levels, along with two-hour time block maximums per day and per unit required an inordinate number of visits to each unit and was not feasible within the budget nor project schedule.	Sample strategically. The season is divided in two parts and units are randomly scheduled to meet 55% weekday and 45% weekend requirement. Time blocks are randomly distributed. Units are grouped by proximity to one another, maximizing geographic coverage potential within time blocks. Time block maximums are extended to four hours.
Sample Size	The prescribed sampling methodology called for 400 visitors per park. However, this was designed for state park surveys where individual parks are the focus, rather than a study of a regional parks and trails system.	Sample according to usage. A minimum of 385 surveys per agency, with actual agency total counts and unit quotas determined by usage of individual units as reported in 2014 usage data. Employing an appropriate data weighting strategy based on 2015 usage data achieves a +/-5% confidence interval at the 95% confidence level for agencies.
Survey Administration	Paper fulfillment, requiring manual response tracking, management and data entry processes.	Employ technology. Electronic tablet administration resulting in subsequent alteration of instructions for disposition tracking, respondent identification and data processing activities.
Surveying Location	Fielding the survey only at designated park or trail exits with representative coverage of high, medium and low volume exits, and only survey individuals leaving the park or trail was not feasible based on observed unit volumes.	Go where people are. Survey individuals who have spent a minimum of 30 minutes in the park or 10 minutes on a trail. Move throughout the units to capture data from different activity areas within parks and from multiple points along trails.
Unit Coverage	Each park and trail unit must receive at least 80 hours of surveying across the season.	Spend only the necessary time. Unit time allotments are modified in accordance with sample plan adjustments summarized above.

Methodology (Cont.)

Sample Plan Modification Details

Initial sampling plan:

- Survey a sufficient number of park/trail users at regional parks and trails units from each of the 10 agencies to achieve a confidence interval of +/-5% at the 95% confidence level.
- Conduct a minimum of 385 total surveys per agency and a minimum of 30 interviews at each of the parks/trails units within each agency.
- Weight surveys at the agency level so that the number of interviews completed within each agency approximates the proportion of summer visits, as reported in the 2014 Annual Use Estimate Survey (<https://metro council.org/getdoc/28348fab-6815-466f-a969-dce378d246e9/BusinessItem.aspx>).

Modified sampling plan:

- Six new regional parks and trails (*Dakota County (Whitetail Woods and Minnesota River Greenway)*, *City of Saint Paul (Trout Brook)* and *Three Rivers Park District (Kingswood, Crystal Lake and Nokomis – Minnesota River)*) were not included in the 2014 Annual Use Estimate Survey. Projected usage estimates for these six units were provided by Metropolitan Council, and quotas for these units were calculated using those estimates.
- Lake Minnetonka Islands in the Three River Park District is only accessible by boat and therefore was not included in the survey.
- Due to a variety of issues, filling minimum quotas in 13 of the units was not achievable. With Met Council approval, quotas for these units were reset to 10.
- Toward the end of data collection, the 2015 Annual Use Estimate Survey was released (<https://metro council.org/Parks/Publications-And-Resources/PARK-USE-REPORTS/2015-Annual-Use-Estimate-of-the-Regional-Parks.aspx>) and Metropolitan Council requested weighting survey responses at the agency level against the 2015 summer visitor data.
- Analysis of the 2015 Annual Use Estimate Survey revealed an error in the 2014 report for Carver County, which resulted in oversampling of Southwest Regional Trail. Although the Carver County data is weighted to reflect the accurate 2015 Usage data, the weight for Dakota County Rail Regional Trail is much higher than weights for other facilities due to the oversampling.

Methodology (Cont.)

Significance Testing

Data tables were created using WinCross Version 14.0.

- Differences between percentages (either agency vs. total or regional park vs. regional trail) were identified using the Z-test procedure, testing at the 95% confidence level.
- Differences between means (either agency vs. total or regional park vs. regional trail) were identified using the T-test procedure, testing at the 95% confidence level.

Appendix C: Weighting and Weights

Weighting Strategy

Data Weighting: Overall

- The number of completed surveys for each agency is weighted so that each agency is statistically representative of their respective proportion of summer visits within the overall system.
