## Project Information

Project Name
Primary County where the Project is Located
Cities or Townships where the Project is Located:

CSAH 5 (Franklin Ave) Reconstruction Project
Hennepin
Minneapolis

The proposed project includes the reconstruction of the CSAH 5 (Franklin Ave) corridor from approximately 0.05 miles west of Blaisdell Ave to approximately 0.03 miles west of Chicago Ave, excluding the I-35W Bridge, within the City of Minneapolis. CSAH 5 (Franklin Ave) is currently classified as an A-Minor Arterial roadway that functions as a reliever. Attachment 2 provides an illustration of the project location.

The project objectives are to improve the accessibility, comfort, and safety for people biking, driving, walking, and using transit along the corridor. Photos depicting the roadway's current condition are included Attachment 3.

Brief Project Description (Include location, road name/functional class, type of improvement, etc.)

In early 2020, Hennepin County completed the Franklin Ave Corridor Study (hennepin.us/franklincorridor) that evaluated both short and long term options for the corridor. Planning efforts included extensive public outreach to collect input from stakeholders to guide recommendations within the study. Typical sections and concepts were developed as part of the study and will guide project design and implementation activities. These materials are included in Attachments 4 and 5, respectively.

The project will include, but is not limited to, the following elements. The specific locations and types of improvements will be determined as part of the design process based on additional community input, data analysis, and environmental review.

- Roadway improvements; such as the replacement of the deteriorated pavement, pavement substructure, curb and gutter, storm sewer
structures.
- Safety improvements; such as the upgrading of traffic signal systems to include dedicated left-turn phasing, the conversion of the existing four-lane undivided configuration to a three-lane (contingent on the community engagement and design processes), along with the installation of curb extensions and/or raised medians that will both reduce the crossing distance for people walking, but also manage the speeds for people driving.
- Pedestrian improvements; such as ADA compliant ramps and sidewalks (free of obstructions), Accessible Pedestrian Signals (APS), high visibility crosswalk markings, curb extensions, raised medians, and countdown timers.
- Bicycle improvements; such as the introduction of dedicated accommodations for people biking (contingent on the design process). In addition, the anticipated conversion of the existing four-lane undivided configuration to a three-lane will improve the biking experience for people crossing and riding along the corridor.
- Streetscaping improvements; such as the introduction of a boulevard space, lighting, and street furniture. Additionally, staff will evaluate the potential for burying overhead utilities as part of the design process.

CSAH 5 (Franklin Ave) from 0.05 miles west of Blaisdell Ave to 0.03 miles west of Chicago Ave, excluding the I-35W Bridge, in Minneapolis.

## Project Funding

Are you applying for competitive funds from another source(s) to implement this project?

If yes, please identify the source(s)
Federal Amount \$7,000,000.00
Match Amount \$6,782,000.00
Minimum of $20 \%$ of project total
Project Total
\$13,782,000.00
For transit projects, the total cost for the application is total cost minus fare revenues.
Match Percentage 49.21\%
Minimum of 20\%
Compute the match percentage by dividing the match amount by the project total
Source of Match Funds Hennepin County
A minimum of $20 \%$ of the total project cost must come from non-federal sources; additional match funds over the $20 \%$ minimum can come from other federal sources

Preferred Program Year
Select one:
2024
Select 2022 or 2023 for TDM projects only. For all other applications, select 2024 or 2025.
Additional Program Years:
Select all years that are feasible if funding in an earlier year becomes available.

## Requirements - All Projects

## All Projects

1.The project must be consistent with the goals and policies in these adopted regional plans: Thrive MSP 2040 (2014), the 2040 Transportation Policy Plan (2018), the 2040 Regional Parks Policy Plan (2018), and the 2040 Water Resources Policy Plan (2015).

Check the box to indicate that the project meets this requirement. Yes
2.The project must be consistent with the 2040 Transportation Policy Plan. Reference the 2040 Transportation Plan goals, objectives, and strategies that relate to the project.

Briefly list the goals, objectives, strategies, and associated pages:

## A) Transportation System Stewardship (P 2.2-2.4)

This project is needed to reconstruct existing assets as maintenance activities (such as overlays and crack seals) are no longer cost effective in extending the useful life of the roadway. Also, it is anticipated that dedicated facilities will be provided for people biking, driving, and walking in an effort to promote choices in transportation.

## B) Safety/Security (P 2.5-2.9)

This project presents an opportunity to make improvements at four intersections (Nicollet Ave, 3rd Ave, 5th Ave, and Portland Ave) that rank in the Top 100 intersections countywide in terms of existing crash frequency. Traffic calming strategies, such as raised medians, curb extensions, and streetscaping will be critical to reducing the frequency of crashes, especially those involving people walking and biking.
C) Access to Destinations (P 2.10-2.25)

A high number of commercial destinations exist along the project corridor. The introduction of compact intersection designs will minimize crossing distances for people walking and aid in managing vehicle speeds for people driving. A number of obstructions (such as utility poles, fire hydrants, and signal poles) are currently located within the existing sidewalk. The relocation of these elements will be key to better serving people with limited mobility.
D) Competitive Economy (P 2.26-2.29)

This route is classified as a Tier 2 route as part of
the Metropolitan Council's Regional Truck Highway Corridor Study and is essential to the regional economy as over 150,000 employees, 4,000 related to manufacturing and distribution, are located within 1 mile of this project. The project's proximity to the Downtown Central Business District and I-35W generates significant freight traffic along Franklin Ave.
E) Healthy and Equitable Communities (P 2.302.34)

Extensive community engagement will occur during the design process, expanding on efforts completed as part of the Franklin Ave Corridor Study. These conversations will be key to minimizing impacts during construction activities that will likely occur over multiple years. Additionally, the existing corridor primarily consists of pavement and concrete sidewalk, offering little to no green infrastructure. This project presents an opportunity to redistribute space and introduce storm water mitigation strategies to properly manage water.

## F) Leveraging Transportation Investments to Guide Land Use (P 2.35-2.41)

Improvements for people biking, walking, and using transit will attract residents to the area surrounding Franklin Ave, especially those who do not own vehicles. Additionally, the introduction of a boulevard space will provide the necessary space for plantings, lighting, and street furniture to encourage spending time in the corridor.

List the applicable documents and pages:
Website: hennepin.us/franklincorridor
Limit 2,800 characters, approximately 400 words
4. The project must exclude costs for studies, preliminary engineering, design, or construction engineering. Right-of-way costs are only eligible as part of transit stations/stops, transit terminals, park-and-ride facilities, or pool-and-ride lots. Noise barriers, drainage projects, fences, landscaping, etc., are not eligible for funding as a standalone project, but can be included as part of the larger submitted project, which is otherwise eligible.

Check the box to indicate that the project meets this requirement. Yes
5.Applicants that are not State Aid cities or counties in the seven-county metro area with populations over 5,000 must contact the MnDOT Metro State Aid Office prior to submitting their application to determine if a public agency sponsor is required.

Check the box to indicate that the project meets this requirement. Yes
6.Applicants must not submit an application for the same project elements in more than one funding application category.

Check the box to indicate that the project meets this requirement. Yes
7. The requested funding amount must be more than or equal to the minimum award and less than or equal to the maximum award. The cost of preparing a project for funding authorization can be substantial. For that reason, minimum federal amounts apply. Other federal funds may be combined with the requested funds for projects exceeding the maximum award, but the source(s) must be identified in the application. Funding amounts by application category are listed below.
Strategic Capacity (Roadway Expansion): \$1,000,000 to \$10,000,000
Roadway Reconstruction/Modernization: \$1,000,000 to \$7,000,000
Traffic Management Technologies (Roadway System Management): \$250,000 to \$3,500,000
Spot Mobility and Safety: \$1,000,000 to \$3,500,000
Bridges Rehabilitation/Replacement: \$1,000,000 to \$7,000,000
Check the box to indicate that the project meets this requirement. Yes
8. The project must comply with the Americans with Disabilities Act (ADA).

Check the box to indicate that the project meets this requirement. Yes
9.In order for a selected project to be included in the Transportation Improvement Program (TIP) and approved by USDOT, the public agency sponsor must either have a current Americans with Disabilities Act (ADA) self-evaluation or transition plan that covers the public right of way/transportation, as required under Title II of the ADA. The plan must be completed by the local agency before the Regional Solicitation application deadline. For the 2022 Regional Solicitation funding cycle, this requirement may include that the plan is updated within the past five years.

The applicant is a public agency that employs 50 or more people and has a completed ADA transition plan that covers the public right of way/transportation.

Date plan completed:

Link to plan:

The applicant is a public agency that employs fewer than 50 people and has a completed ADA self-evaluation that covers the public right of way/transportation.

Date self-evaluation completed:

Yes 08/31/2015
hennepin.us/-
/media/hennepinus/residents/transportation/docum ents/ada-sidewalk-transition-plan.pdf

Link to plan:
Upload plan or self-evaluation if there is no link
Upload as PDF
10. The project must be accessible and open to the general public.

Check the box to indicate that the project meets this requirement. Yes
11.The owner/operator of the facility must operate and maintain the project year-round for the useful life of the improvement, per FHWA direction established 8/27/2008 and updated 6/27/2017.

Check the box to indicate that the project meets this requirement. Yes
12. The project must represent a permanent improvement with independent utility. The term independent utility means the project provides benefits described in the application by itself and does not depend on any construction elements of the project being funded from other sources outside the regional solicitation, excluding the required non-federal match. Projects that include traffic management or transit operating funds as part of a construction project are exempt from this policy.

Check the box to indicate that the project meets this requirement. Yes
13. The project must not be a temporary construction project. A temporary construction project is defined as work that must be replaced within five years and is ineligible for funding. The project must also not be staged construction where the project will be replaced as part of future stages. Staged construction is eligible for funding as long as future stages build on, rather than replace, previous work.

Check the box to indicate that the project meets this requirement. Yes
14.The project applicant must send written notification regarding the proposed project to all affected state and local units of government prior to submitting the application.

Check the box to indicate that the project meets this requirement. Yes

## Roadways Including Multimodal Elements

1.All roadway and bridge projects must be identified as a principal arterial (non-freeway facilities only) or A-minor arterial as shown on the latest TAB approved roadway functional classification map.

Check the box to indicate that the project meets this requirement. Yes
Roadway Expansion and Reconstruction/Modernization and Spot Mobility projects only:
2. The project must be designed to meet 10 -ton load limit standards.

Check the box to indicate that the project meets this requirement. Yes
Bridge Rehabilitation/Replacement and Strategic Capacity projects only:
3.Projects requiring a grade-separated crossing of a principal arterial freeway must be limited to the federal share of those project costs identified as local (non-MnDOT) cost responsibility using MnDOTs Cost Participation for Cooperative Construction Projects and Maintenance Responsibilities manual. In the case of a federally funded trunk highway project, the policy guidelines should be read as if the funded trunk highway route is under local jurisdiction.

Check the box to indicate that the project meets this requirement.
4.The bridge must carry vehicular traffic. Bridges can carry traffic from multiple modes. However, bridges that are exclusively for bicycle or pedestrian traffic must apply under one of the Bicycle and Pedestrian Facilities application categories. Rail-only bridges are ineligible for funding.

Check the box to indicate that the project meets this requirement.
Bridge Rehabilitation/Replacement projects only:
5. The length of the bridge must equal or exceed 20 feet.

Check the box to indicate that the project meets this requirement.
6. The bridge must have a National Bridge Inventory Rating of 6 or less for rehabilitation projects and 4 or less for replacement projects.

Check the box to indicate that the project meets this requirement.
Roadway Expansion, Reconstruction/Modernization, and Bridge Rehabilitation/Replacement projects only:
7. All roadway projects that involve the construction of a new/expanded interchange or new interchange ramps must have approval by the Metropolitan Council/MnDOT Interchange Planning Review Committee prior to application submittal. Please contact Michael Corbett at MnDOT ( Michael.J.Corbett@state.mn.us or 651-234-7793) to determine whether your project needs to go through this process as described in Appendix F of the 2040 Transportation Policy Plan.

Check the box to indicate that the project meets this requirement. Yes

## Requirements - Roadways Including Multimodal Elements

## Specific Roadway Elements

## CONSTRUCTION PROJECT ELEMENTS/COST ESTIMATES <br> Cost

Mobilization (approx. 5\% of total cost)
\$544,000.00
Removals (approx. 5\% of total cost) \$286,000.00

Roadway (grading, borrow, etc.) \$578,000.00
Roadway (aggregates and paving) \$1,293,000.00

## Measure B: 2040 Forecast ADT

Use Metropolitan Council model to determine forecast (2040) ADT No
volume
If checked, METC Staff will provide Forecast (2040) ADT volume
OR

Identify the approved county or city travel demand model to determine forecast (2040) ADT volume

Hennepin County conducted a comprehensive travel demand forecasting analysis based on the Metropolitan Council's regional activity-based model. Forecast traffic volumes were based on a combination of socio-economic and land use assumptions. It should be noted that the future transportation network was assumed to include projects identified in the regional Transportation Improvement Program and the county's Capital Improvement Program. Attachment 8 illustrates the forecast traffic volumes.

16900

Measure A: Connection to disadvantaged populations and projects benefits, impacts, and mitigation
1.Sub-measure: Equity Population Engagement: A successful project is one that is the result of active engagement of low-income populations, people of color, persons with disabilities, youth and the elderly. Engagement should occur prior to and during a projects development, with the intent to provide direct benefits to, or solve, an expressed transportation issue, while also limiting and mitigating any negative impacts. Describe and map the location of any low-income populations, people of color, disabled populations, youth or the elderly within a $1 / 2$ mile of the proposed project. Describe how these specific populations were engaged and provided outreach to, whether through community planning efforts, project needs identification, or during the project development process. Describe what engagement methods and tools were used and how the input is reflected in the projects purpose and need and design. Elements of quality engagement include: outreach and engagement to specific communities and populations that are likely to be directly impacted by the project; techniques to reach out to populations traditionally not involved in community engagement related to transportation projects; feedback from these populations identifying potential positive and negative elements of the proposed project through engagement, study recommendations, or plans that provide feedback from populations that may be impacted by the proposed project. If relevant, describe how NEPA or Title VI regulations will guide engagement activities.

The Franklin Ave Corridor Study (hennepin.us/franklincorridor) reviewed opportunities to reallocate space along the corridor to better accommodate users; relying on community engagement to understand issues and identify opportunities. As illustrated in the SocioEconomic Conditions map, the communities surrounding Franklin Ave include areas of concentrated poverty, with a relatively high percentage consisting of people of color. These populations rely in greater proportion on walking, biking, and transit for daily travel; therefore, the study sought opportunities to apply design best practices to create a corridor with an expanded focus on multimodal travel, while still accommodating vehicle and freight travel. Furthermore, special consideration was given to the needs of the seeing impaired community, as Vision Loss Resources and Blind Inc. are two nearby facilities that provide training and services for people with visual impairments.

Community engagement efforts (described in Attachment 9) were specifically targeted for the following stakeholder groups: Hope Community, Our Streets, Native American Community Development Institute, Franklin Library, Norway House, Plymouth Congregational Church, Blind Inc, and the Native American Community - MUID Public Safety Committee. These stakeholders demonstrate an extensive knowledge of accessibility, mobility, and safety issues in the area. Two open houses were held at Plymouth Congregational Church, and an online wikimap was made available for community members who were unable to attend the open houses so they could comment on study materials. Staff also participated in the 2019 Franklin Open Streets event and the Franklin Library Transportation Fair. In addition to these public events, staff convened a Corridor

#### Abstract

Advisory Group (CAG) that included stakeholders and representatives from businesses, institutions and organizations. Staff met with each of the four neighborhood organizations and with city and county Bicycle/Pedestrian Advisory Committees to provide updates on study progress and collect feedback on preliminary findings.

Based on insights from these engagement, the following themes emerged: pedestrian crossing safety concerns, curb ramp and sidewalk deficiency, vehicle weaving and speeding, a desire for dedicated bicycle facilities, and support for modifying the existing roadway configuration to better accommodate user activity. These themes informed concept development; noting that a reconstruction project provides the optimal opportunity to reallocate space within the corridor. It is anticipated that a number of countermeasures (such as raised medians, curb extensions, and crossing beacons) will be considered to improve accessibility, safety, and mobility for people walking along the corridor.
2.Sub-measure: Equity Population Benefits and Impacts: A successful project is one that has been designed to provide direct benefits to lowincome populations, people of color, persons with disabilities, youth and the elderly. All projects must mitigate potential negative benefits as required under federal law. Projects that are designed to provide benefits go beyond the mitigation requirement to proactively provide transportation benefits and solve transportation issues experienced by Equity populations.
a.Describe the projects benefits to low-income populations, people of color, children, people with disabilities, and the elderly. Benefits could relate to pedestrian and bicycle safety improvements; public health benefits; direct access improvements for residents or improved access to destinations such as jobs, school, health care or other; travel time improvements; gap closures; new transportation services or modal options, leveraging of other beneficial projects and investments; and/or community connection and cohesion improvements. Note that this is not an exhaustive list.

The CSAH 5 (Franklin Ave) Reconstruction Project will benefit low-income populations, people of color, children, people with disabilities, and the elderly. A detailed description of how this project will benefit disadvantaged populations is included below. Attachment 10 identifies specific destinations within 0.5 miles of the project area that likely attract each population group.

Low-income populations, including people of color, will benefit from an improved pedestrian realm as it leads to a more comfortable and safer walking experience. The introduction of design strategies that promote complete streets (such as raised medians, curb extensions, and crossing beacons) will make walking equally attractive as driving along the corridor. This is especially important, as a relatively high percentage of zero car households exists within the surrounding area (more than 30 percent recorded as part of the ACS).

Children and the elderly will both benefit from the improved pedestrian realm and intersection safety improvements. These are two vulnerable groups who require more time to cross an intersection. Proven safety countermeasures (such as raised medians, curb extensions, enhanced pavement markings, and lighting) will improve the safety and comfort of people crossing.

People with disabilities, including a large population with visual impairments and limited mobility, will benefit from the improved pedestrian realm. The county's self evaluation of sidewalk facilities (hennepin.maps.arcgis.com/apps/StoryMapBasic/in dex.html?appid=aee6010fe8e64e23b757dd8d69ef 81 fe ) identifies a number of obstructions and defects that exist along Franklin Ave. These
conditions present barriers to these populations as they experience difficulty when trying to travel along or across Franklin Ave. This project presents an opportunity to create a consistent experience for these populations by implementing ADA design best practices. Project elements such as curb extensions, APS, and high-visibility pavement markings will increase awareness and predictability for all people crossing intersections.

Many of the vulnerable users near Franklin Ave rely on service providers that exist along or near the corridor. Creating an ADA accessibility sidewalk (free of obstructions) is critical to ensuring access to these services by means of biking, walking, or taking transit. Consideration will be given for a creating a dedicated bicycle facility to make biking a more attractive transportation mode along Franklin Ave. In addition, the project team will include representation from Metro Transit to seek out opportunities to improve transit services (such as boarding/disembarking procedures and signal preferences) along Franklin Ave (specifically as it relates to Route 2).
(Limit 2,800 characters; approximately 400 words)
b. Describe any negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly created by the project, along with measures that will be taken to mitigate them. Negative impacts that are not adequately mitigated can result in a reduction in points.
Below is a list of negative impacts. Note that this is not an exhaustive list.
Increased difficulty in street crossing caused by increased roadway width, increased traffic speed, wider turning radii, or other elements that negatively impact pedestrian access.
Increased noise.
Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.

Project elements that are detrimental to location-based air quality by increasing stop/start activity at intersections, creating vehicle idling areas,
directing an increased number of vehicles to a particular point, etc.
Increased speed and/or cut-through traffic.
Removed or diminished safe bicycle access.
Inclusion of some other barrier to access to jobs and other destinations.
Displacement of residents and businesses.
Mitigation of temporary construction/implementation impacts such as dust; noise; reduced access for travelers and to businesses; disruption of utilities; and eliminated street crossings.
Other

No permanent negative impacts to low-income populations, people of color, children, people with disabilities, and the elderly are anticipated by the project. The project will create a multimodal corridor while still accommodating the needs of people driving, including freight operations. The enhanced multimodal functionality of Franklin Ave will improve mobility, access and safety for all of the vulnerable population groups referenced earlier; regardless of the mode of travel they are using. Additionally, the project team will seek out opportunities to introduce boulevard space in an effort to reduce impervious surfaces, providing a significant betterment to the environment.

Some temporary negative impacts are anticipated during the construction phase of the project. These could include limited mobility and access to residences and businesses caused by temporary closure of the street or sidewalk space as part of construction activities. All potential construction impacts will be mitigated by requiring the contractor to follow the special provisions developed for the project.

Negative impacts to accessibility

Impacts to existing sidewalk facilities are anticipated during construction activities. The project contractor will be required to follow the temporary traffic control plans which will provide for temporary accommodations and/ or detours for people walking and biking. Access to housing, local retail and service providers is critical, therefore, staff will work with businesses to minimize negative impacts during construction.

All modes will be provided with proper signage and pavement markings to ensure clear and safe detour routes. Detailed maps will be available to community residents and businesses identifying the timing and location of detour routes.

Negative impacts to transit

> Some transit routes may need to be detoured during construction. Staff will coordinate with Metro Transit to publish consistent messaging, notifying transit customers of any changes.

## Negative impacts to the environment

Storm water impacts during construction will be mitigated through treatments such as silt fencing and inlet protection as required by the project's Storm Water Pollution Prevention Plan.
(Limit 2,800 characters; approximately 400 words)

## Select one:

3.Sub-measure: Bonus Points Those projects that score at least $80 \%$ of the maximum total points available through sub-measures 1 and 2 will be awarded bonus points based on the geographic location of the project. These points will be assigned as follows, based on the highestscoring geography the project contacts:
a. 25 points to projects within an Area of Concentrated Poverty with 50\% or more people of color
b. 20 points to projects within an Area of Concentrated Poverty
c. 15 points to projects within census tracts with the percent of population in poverty or population of color above the regional average percent
d. 10 points for all other areas

Project is located in an Area of Concentrated Poverty where 50\%
or more of residents are people of color (ACP50):

## Part 2: Affordable Housing Access

Reference Access to Affordable Housing Guidance located under Regional Solicitation Resources for information on how to respond to this measure and create the map.
If text box is not showing, click Edit or "Add" in top right of page.

Response:
(Limit 2,100 characters; approximately 300 words)

Attachment 11 identifies specific affordable housing sites within a $1 / 2$ mile of the project location. Due to the high number of affordable housing opportunities within close proximity project, the detailed description of each affordable housing location (including number of bedrooms, affordability limit based on area median income (AMI), etc.) is listed in Attachment 11.

This project will reallocate space in the corridor to improve accommodations for people biking and walking. The proposed sidewalk facilities will likely be complemented with boulevard space (to provide separation from the roadway), lighting (to promote user comfort), and proven countermeasures such as raised medians, curb extensions, and/or crossing beacons (to promote safety along and across the corridor). Whenever feasible, intersections will offer a consistent experience for people crossing (in terms of APS placement, pedestrian ramp design, and sidewalk alignment) to best serve people with limited mobility. Additionally, it is anticipated that a dedicated facility for people biking (contingent on the design process) will be introduced to reduce conflicts among each modal group. Staff will carefully evaluate the preferred bikeway facility type to balance mobility and access along the corridor. These project elements will promote choices in transportation and improve the user experience for first/last mile connections to existing transit stops.

## Measure B: Geometric, Structural, or Infrastructure Improvements

[^0]Yes
Franklin Ave is identified as a Tier 2 route as part of Met Council's Regional Truck Highway Corridor Study. Staff referenced a StreetLight analysis to estimate 2,350 commercial vehicles along Franklin Ave daily (Attachment 12).

Response:
Dedicated left-turn lanes and phasing will benefit freight traffic at signalized intersections to improve their level of service. In addition, commercial vehicles will benefit along the corridor through the conversion of the 4-lane environment to a 3-lane to reduce conflict points among users. Additionally, driveway aprons will be designed to better accommodate freight deliveries, which occurs frequently given the number of commercial businesses along the corridor.

Although roadways near Franklin Ave generally follow a grid system, two intersections (Blaisdell Ave and 1st Ave) include skewed approaches as they approach Franklin Ave. Strategic application of curb extensions and high-visibility pavement markings will assist users in navigating these unique intersections.

The redistribution of space will offer benefits as it relates to sight lines. Conversion of the existing 4lane configuration to a 3-lane will eliminate the potential for dual-threat related crashes.
Furthermore, the introduction of a boulevard space (with appropriate plantings) will likely require curb narrowing, providing additional sight distance at intersections.

Yes
The roadway width along Franklin Ave is 48 ' and includes 4 vehicle lanes. No vertical design elements exist between the curbs, relying solely on pavement markings and signs to guide users. Also, off-peak parking is permitted and experiences varying use.

The user experience will be improved through design strategies. Sidewalks will be ADA compliant. Boulevards will provide greater separation and buffer people walking from vehicles and provide space for snow storage. Dedicated bicycle facilities (pending design review) will relieve the sidewalk and roadway of bicycle use. Curb extensions, raised medians, and plantings will offer visual cues to manage speeds and encourage high yielding rates.

Staff will seek input from stakeholders to identify locations with high crossing activity for further evaluation for various design elements. These locations will be top candidates for curb extensions and raised medians that will minimize exposure for people walking and allow for exceptional facilities for people with limited mobility. In addition, these design elements will better manage the turning activity of people driving.

The anticipated conversion of the 4-lane environment to a 3-lane will better facilitate turning movements and eliminate the potential for dualthreat crashes. Furthermore, ITS elements will be introduced to provide reliable and efficient signal operations.

Yes
A number of local streets include skewed approaches along Franklin Ave; specifically, at Blaisdell Ave and 1st Ave. The use of curb extensions, raised medians, and high-visibility pavement markings will serve as visual cues to assist in intersection navigation.

The existing vertical alignment along Franklin Ave is relatively flat, therefore, sight distance is generally adequate. However, the introduction of curb extensions and raised medians will minimize crossing distances, reducing stopping sight distances needed by people driving to react to people crossing.

This project may adjust the vertical alignment in an effort to better manage storm water to minimize flood risk for the area.

Improved stormwater mitigation

Response:

Signals/lighting upgrades:

Response:

Yes
No areas along Franklin Ave were considered a high risk for flooding as identified by MetCouncil's Localized Flood Map Screening Tool. However, some intersections experience minimal ponding during intense weather events.

Staff will collaborate with the city, park board, and the Mississippi Watershed Management Organization to implement best management practices (BMPs) to withstand weather events and improve water quality. It is anticipated that the proposed impervious surface conditions (pavement and sidewalks) will be less than the existing condition. Diverse streetscaping elements (appropriate for Minnesota climates) will be selected to increase their likelihood of thriving.

Yes
This project will replace and/or upgrade signals to the latest technologies, such as: dedicated left-turn phasing, signal communications, and ITS components. These improvements will allow for flexible signal operations to accommodate time of day needs. Additionally, ITS components will be essential for users to properly identify one-way streets to minimize improper behaviors.

The existing lighting is inconsistent and includes different types of lights. The specific type and location of new lighting will be consistent with the City's Street Lighting Plan (Attachment 13). Pedestrian scale lighting will maximize the visibility of people walking and crossing.

Yes

A full reconstruction is needed to allow for proper placement and orientation of pedestrian ramps, APS, crosswalk markings, and countdown timers. Sidewalks and driveway aprons will be modified to better manage slopes and transitions. In addition, the placement of signs, signal poles, and overhead utilities will not interfere with maintenance activities (specifically snow and ice control operations) to ensure accessibility throughout the entire year. These design elements will offer a consistent experience for people walking, especially those with limited mobility, which is key for the area that Franklin Ave serves.

Attachment 14 lists reported crashes (2016-2018) along the project, and Attachment 15 lists CMFs applied in the B/C Analysis.

XX - Countermeasure: Crashes Targeted (CMF ID, \% Reduction)
1) LT lanes at signalized intersections: LT (271, 47\%)
2) Additional primary signal head on CSAHs: RA (1485, 46\%)
3) Convert to 3-lane: All (2841, 49\%)

Crash Modification Factor Used:
4) FYA prot/perm LT phasing: LT crashes on CSAH 5 (4177, 19.4\%)
5) Countdown timers: PED (5272, 70\%)
6) Convert perm LT phasing to FYA prot/perm LT phasing: LT crashes on CSAH 5 (7684, 40.2\%)
7) Improve intersection lighting: Nighttime PED (FHWA Desktop Reference, 42\%)
8) Convert to 3-lane: PED (FHWA Safe

Transportation for Every Pedestrian, 29\%)

The Benefit/Cost Analysis evaluated the project corridor in twelve separate sections (comprised of major intersections and segments) to target crash themes. Up to two (of the eight selected) CMFs were applied to each crash based on the reported crash type, along with the anticipated benefit provided by each safety countermeasure. A maximum of four CMFs were applied to each individual intersection or segment since the project corridor experiences diverse crash types among people biking, driving, and walking.

The expected service life for each improvement was 20 years as entered into the Benefit/Cost Worksheets. If a a service life was not stated within the guidelines of the 2020 Highway Safety Improvement Program Criteria, then staff identified an expected service life value based on information provided in the 2015 MnDOT Traffic Engineering Manual.

The overall average crash reduction expected from the project is \(26 \%\) (based on a \(74 \%\) crashes modification factor). Approximately \(26 \%\) (19) of the total number of reported crashes from the years 2016 to 2018 will be reduced annually through the implementation of various safety countermeasures as part of this project.

Measure A: Multimodal Elements and Existing Connections

Improving safety for people walking and biking is an important feature in this project. Specific safety strategies will respond to issues identified in prior studies and the county's crash system (which includes a screening of intersections/segments countywide), the 2017 Minneapolis Pedestrian Crash Study, and the 2018 Minneapolis Vision Zero Crash Study. It is anticipated that the following FHWA proven safety countermeasures will be evaluated: a 4-to-3 conversion, raised medians, improved lighting, high-visibility pavement markings, curb extensions, and dedicated left-turn lanes. Additionally, the implementation of leading pedestrian intervals and signal preference for transit operations will be considered as part of the design process.

As part of the outreach efforts, staff learned that people walking along Franklin Ave frequently experience difficulty and discomfort when attempting to cross the road. Raised medians will allow for two-stage crossings at unsignalized intersections, eliminating the potential for dualthreat related crashes. Curb extensions (especially along minor street approaches) will be introduced to shorten the crossing distance and provide better visibility for people driving. A review of the recent crash history suggests that a relatively high percentage of crashes was experienced at intersections involve turning vehicles. For instance, approximately \(50 \%\) of pedestrian crashes reported at the Nicollet Ave intersection involve left-turning vehicles. The introduction of enhanced lighting, high-visibility pavement markings, and flexible leftturn signal operations will target this crash type.

The project will implement a sidewalk environment that is wider and set back from the roadway via a boulevard space. These sidewalk enhancements
not only make walking along the corridor more comfortable, but also minimize poor decisionmaking. Additionally, people in wheelchairs (and other assisted walking devices) often utilize the roadway to travel the corridor due to current obstructions within the sidewalk space and general ADA non-compliance. This condition is undesirable as these users are exposing themselves to potentially hazardous situations.

The county's 2040 Bicycle Transportation Plan and the Draft Minneapolis Transportation Action Plan All Ages and Abilities Network recommend dedicated bicycle facilities along Franklin Avenue. The inclusion of bicycle facilities will reduce the number of people riding in the sidewalk, ensuring that people walking will have full control of this space.

Furthermore, the introduction of a 3-lane roadway configuration will assist in managing vehicle speeds. This is especially important as the likelihood of a pedestrian crash resulting in severe injury is directly proportionate to vehicle speeds.

\section*{Measure A: Multimodal Elements and Existing Connections}

This project will aim to provide benefits for people walking, biking, driving, and using transit. Two key improvements anticipated include enhancements to the pedestrian realm (which currently consists of substandard sidewalk and curb ramps) and the introduction of dedicated bicycle facilities. These key improvements, along with others, will provide critical connections within the surrounding area (as illustrated in Attachment 16).

Pedestrian realm upgrades will improve the comfort, safety, and mobility of people walking. This is important as nearby residents rely on walking and transit for transportation; with pedestrian volumes reflecting this demand (750 to 1,800 daily Minneapolis). The existing sidewalk contains many deficiencies including poles, signs, and other impediments that limit mobility. As identified in the county's 2015 ADA Transition Plan, a majority of the curb ramps and connecting sidewalk segments are not ADA compliant. It is anticipated that sidewalk space will be widened and a boulevard space will be introduced. These conditions will promote a comfortable walking experience and provide space for street trees, lights, poles and utilities (which formerly encroached the sidewalk space). All curb ramps and intersections will be made ADA compliant with APS. Traffic calming strategies (such as curb extensions, raised medians, and/or crossing beacons) will be introduced to improve safety and manage the speeds of people driving.

The project limits (approximately Blaisdell Ave to Chicago Ave) are identified within the RBTN (Tier 1 Alignment), the 2040 Hennepin County Bicycle Transportation Plan (future bicycle route) and the Draft Minneapolis Transportation Action Plan (future bicycle route). It is anticipated that the
project will introduce a dedicated bicycle facility; relying on the design process to select the preferred facility type (i.e. on-road versus off-road). For people biking, 4-lane undivided roadways cause a high level of traffic stress. Even with these conditions, a relatively high number of people still elect to ride along Franklin Ave ( 320 to 790 daily Minneapolis). This data suggests a demand for bicycle travel on the corridor, therefore, the inclusion of dedicated bicycle facilities will make Franklin Ave a viable bicycle travel option for existing and potential bicyclists.

At this time, transit service is not anticipated to be negatively impacted by this project. Bus Route 2, a high frequency route, currently provides transit services along Franklin Ave. In 2019, Metro Transit evaluated and adjusted various stop locations to improve travel times and the customer experience. Additionally, the D-Line Bus Rapid Transit is under development and will extend along Chicago Ave, adjacent to the project area.

\title{
Transit Projects Not Requiring Construction
}

If the applicant is completing a transit application that is operations only, check the box and do not complete the remainder of the form. These projects will receive full points for the Risk Assessment.

Targeted outreach to this project with the general public and partner agencies have been used to help identify the project need.

75\%
At least one meeting specific to this project with the general public has been used to help identify the project need.

50\%
At least one meeting specific to this project with key partner agencies has been used to help identify the project need.

50\%
No meeting or outreach specific to this project was conducted, but the project was identified through meetings and/or outreach related to a larger planning effort.

25\%
No outreach has led to the selection of this project.

Public engagement for the CSAH 5 (Franklin Ave) Reconstruction Project was executed via in-person meetings that included a total 21 stakeholder meetings and 4 outreach events (two public meetings and two open streets). In addition, over 200 comments were received from the public as part of an online interactive map survey. A summary of the public engagement process is available at hennepin.us/franklincorridor.

Key issues identified during the public engagement process are listed below:
- Lack of safe crossings along the corridor
- Curb ramps and sidewalks are generally in poor condition
- Lack of dedicated bicycle facilities

Response (Limit 2,800 characters; approximately 400 words):
- Lack of adequate signage for on-street parking restrictions
- Weaving and speeding behavior by people driving commonly observed

Potential solutions offered during the public engagement process are listed below:
- Shorten the crossing distances via curb extensions and/or raised medians
- Upgrade curb ramps and sidewalks
- Introduce dedicated facilities for people biking
- Convert the existing four-lane roadway to a threelane roadway
- Prohibit on-street parking in many areas along the corridor

Information gathered during the public engagement process for the Franklin Ave Corridor Study was used to develop the anticipated typical section(s) and layout(s). As this project advances to preliminary and final design, further engagement will take place to collect feedback on project materials as they are updated.

Attachment 11: Affordable Housing Access Map and Detail Summary

A detailed description of how this project will improve access to affordable housing locations is included below, including number of bedrooms, affordability limit based on area median income (AMI), etc.
Attachment 11 identifies specific affordable housing sites within a \(1 / 2\) mile of the project location.
Total number of affordable sites within project area: 75
Number of existing sites: 74
Number of sites under construction: 0
Number of planned sites identified: 1

Location 1: 1500 Nicollet
Affordable Units: 183
Bedrooms per unit: 0-3
50\% AMI: 37
60\% AMI: 146

Location 2: 1822 Park
Affordable Units: 18
Bedrooms per unit: 1
30\% AMI: 6
50\% AMI: 12

Location 3: 2011 Pillsbury/Alliance
Affordable Units: 27
Bedrooms per unit: 0
30\% AMI: 27

Location 4: 430 Oak Grove
Affordable Units: 1
Bedrooms per unit: 1
60\% AMI: 1

Location 5: Abbott Apts
Affordable Units: 25
Bedrooms per unit: 0-1
50\% AMI: 25

Location 6: Abbott View
Affordable Units: 20
Bedrooms per unit: 1-2
30\% AMI: 20
Section 8

Location 7: Alliance Addition
Affordable Units: 184
Bedrooms per unit: 0-2
30\% AMI: 148
50\% AMI: 36
LIHTC

Location 8: Alliance Stabilization, Phase III
Affordable Units: 12
Bedrooms per unit: NA
60\% AMI: 12

Location 9: Archdale Apartments
Affordable Units: 30
Bedrooms per unit: 1
60\% AMI: 30
LIHTC

Location 10: Augustana Chapel View Homes
Affordable Units: 33
Bedrooms per unit: 0-1
50\% AMI: 33

Location 11: Blaisdell Housing
Affordable Units: 150
Bedrooms per unit: 0-2
60\% AMI: 150
Section 8

Location 12: Canadian Terrace
Affordable Units: 19
Bedrooms per unit: 1-3
30\% AMI: 19

Location 13: Chicago Avenue Apartments
Affordable Units: 60
Bedrooms per unit: 1-3
30\% AMI: 60
Section 8

Location 14: Clinton Avenue Townhomes
Affordable Units: 8
Bedrooms per unit: 2-4
30\% AMI: 8
Section 8

\section*{Franklin Avenue corridor study}

\section*{County Road 5 in Minneapolis}

Hennepin County, in coordination with the City of Minneapolis, is conducting a feasibility study to evaluate ways to improve safety, accessibility and comfort for all road users along Franklin Avenue (County Road 5) from Lyndale (County Road 22) to Bloomington avenues.

The study will identify both short and long term options for corridor improvements.

\section*{Project goals}

In its current form, this segment of Franklin Avenue includes a four-lane, undivided roadway (meaning there is no median in most areas) with off-peak parking at certain locations and no bike facilities.
There are opportunities to improve transportation for all people using Franklin Avenue:
- Provide a designated space for all people walking, biking, using transit and driving
- Minimize traffic delay for people using transit and driving
- Provide safer pedestrian crossings at intersections
- Allow for better community connections along the corridor
- Support local businesses and institutions with improved access
- Enhance the visual character with lighting, trees and furnishings

\section*{Share your thoughts}

Public input is a key component of this study. There will be multiple opportunities for people who live, work and travel through the corridor to provide feedback on their needs and concerns for Franklin Avenue. The study is scheduled to begin in July 2019 and will conclude in March 2020.

\section*{Franklin Avenue corridor study}

\section*{Community engagement summary}

Hennepin County, in coordination with the City of Minneapolis, is conducting a feasibility study to evaluate ways to improve safety, accessibility and comfort for all road users along Franklin Avenue (County Road 5) between Lyndale (County Road 22) and Bloomington avenues. Information was gathered between July 2019 and March 2020.

\section*{What we heard from you}
- Lack of safe crossings across the corridor
- Curb ramps and sidewalks are in poor condition
- Desire for dedicated bicycle facilities
- Support for reducing number of travel lanes from four to three
- On-street parking locations are not clear
- Weaving and speeding by people driving creates uncertainty for all users

\section*{Possible solutions being considered}
- Shorten crossing distances through curb extensions and median refuges
- Improve sidewalks and curb ramps (if reconstruction opportunity is available)
- Add dedicated bicycle facilities (e.g. buffered bike lanes, cycle track, etc.)
- Reduce the number of travel lanes to two travel lanes and a center left turn lane (where possible)
- Remove on-street parking along the majority of the corridor
- Create more consistency through lane realignment, spaces for people biking and other improvements

\section*{CSAH 5 (Franklin Ave) Reconstruction Project}

Attachment 15 | Crash Modification Factors

\section*{STEP.. Safe Transportation for Every Pedestrian}

Poodestions scocounted tor 15\%
of all roadway fatalities in the US in \(2015 .{ }^{1}\)

> uncontrolled and non-intersection locations. \({ }^{1}\) und pedestrian fatalities occurred at

The Federal Highway Administration (FHWA) is working to reduce pedestrian fatalities and injuries at uncontrolled crossing Ocarions through Safe Transportation for Every Pedestrian (STEP). its extensive outreach and technical assistance activities are promoting cost-effective countermeasures with known safety benefits to State and local transportation agencies nationwide. The STEP program focuses on crossing treatments designed to improve pedestrian safety at uncontrolled crossing locations. FHWA is promoting five countermeasures and their associated benefits through STEP.

Most of the STEP countermeasures have been evaluated for their effectiveness to reduce pedestrian crash rates. Where avair effectiveness to reduce pedestrian crash rates. Where countermeasure below, based on national transportation safety studies. The CRF is the expected percent reduction in the number of pedestrian crashes after implementing a countermeasure. Please consult PEDSAFE, the Pedestrian Safety Guide and Countermeasure Selection System (http://www.pedbikesafe.org),
for more information about CRFs and guidance for application of these countermeasures to various roadway and safety conditions.

5 Seltwhena Sita fitart
EDC

\section*{5 Proven Countermeasures}

\section*{CROSSWALK VISIBILITY ENHANCEMENTS}

CRF: \(\mathbf{2 5 - 4 8 \%}\) *
Crosswalk visibility enhancements are added features that increase the prominence of crosswalks and pedestrians to oncoming drivers, such as lighting, warning signage, or varied crosswalk markings. Common examples include using a ladder design for the cros warning signage.

\section*{RAISED CROSSWALK}

CRF: not available
Raised crosswalks span the width of a roadway at a crossing point, often at mid-block crossings. These raised speed tables calm vehicular traffic and create a level crossing at sidewalk height for pedestrians.

PEDESTRIAN REFUGE ISLAND
Pedestrian refuge islands are raised islands within a street, located at intersections or mid-block crossings. Pedestrian refuge islands break up a complex crossing into two shorter crossings and separate motor vehicle and pedestrian crossing movements.

PEDESTRIAN HYBRID BEACON (PHB)
PHBs are pedestrian-activated warning devices designed for higher speed, multilane roadways. PHBs are typically installed at the side of the road or on mast arms over uncontrolled midblock pedestrian crossings. When activated, the device displays a sequence of flashing yellow, steady yellow, solid red (pedestrians get a walk symbol; drivers must stop), and flashing red (pedestrians finish

ROAD DIET Road Diets reconfigure existing roadways by reducing the number of vehicular travel lanes. This frees up space for pedestrian refuge islands, curb extensions, bicycle lanes, or other features that Diet involves converting a fourlane undivided roadmay to of Road through lanes and a center two-way left-turn lane.
