

PROPOSED STRATEGIES TO ADDRESS ENVIRONMENTAL AND COMMUNITY IMPACTS

Online Portal and Storefronts

Strategies identified in this document are being proposed and explored by the Blue Line Extension Project, but are subject to final approval by the Federal Transit Administration.

The Blue Line Extension will be a generational investment that will connect people and communities to new opportunities. With the many benefits of this project, there will also be some impacts that will require thoughtful strategies to address. Your input is needed to help inform how the project addresses certain environmental and community impacts.

To improve access to project and anti-displacement resources such as relocation assistance, business support, and construction complaints, an online portal would be created and two physical storefronts in Brooklyn Park and Minneapolis would be opened.

Online Portal

The Metropolitan Council would develop an app to create an easily accessible space for affected residents, property owners, tenants, and business owners to access:

- Relocation and anti-displacement resources
- Information regarding construction-related disruptions and closures
- Other available information and resources

Storefronts

Storefronts would be opened in Brooklyn Park and Minneapolis, acting as a space for:

- Gathering information from contractors and staff
- Finding resources during construction
- Asking project-related questions
- Hosting meetings, open houses, and events

To complement project investments in anti-displacement strategies, government and community partners are also advancing robust anti-displacement and community prosperity strategies separate from the project. Learn more at yourblueline.org

We Want to Hear From You!

To ensure we're meeting the needs of the community, please take this survey to share your feedback on the proposed strategies above related to providing online and storefront resources.
