

Technical Report

Hazardous and Regulated Materials

1.0 Introduction

1.1 Purpose of Report

This Hazardous and Regulated Materials Technical Report has been prepared in support of the Bottineau Transitway Project Draft Environmental Impact Statement (Draft EIS). The objective of this report is to evaluate the Bottineau Transitway Project's potential to encounter during construction, contaminated soils or groundwater as a result of hazardous and/or regulated materials near the project. This includes the following:

- Evaluate the Project's likelihood to encounter buried or aboveground storage tanks that may or may not be leaking.
- Evaluate the Project's likelihood to encounter hazardous building material such as asbestos, lead paint, fluorescent lights, and chemicals.
- Evaluate the Project's likelihood to encounter contaminated material or soils that may have been abandoned at the ground surface or buried.
- Evaluate the Project's likelihood to encounter contaminated groundwater.

2.0 Technical Analysis

2.1 Regulatory Context/Methodology

2.1.1 Legal and Regulatory Context

The Minnesota Pollution Control Agency (MPCA) oversees regulations pertaining to contaminated soil, groundwater, and waste cleanup plan approvals; petroleum underground storage tank registration and removal; and National Pollutant Discharge Elimination System (NPDES) permitting. Additionally, the Minnesota Department of Health (MDH) regulates asbestos abatement. Activities that encounter contaminated materials must follow state requirements for safe handling and disposal under the purview of the MPCA.

2.1.2 Study Area

The study area includes potentially contaminated properties or regulated material facilities around each proposed alignment within the appropriate ASTM (American Society of Testing and Materials) standard search distance for available governmental databases identified in the ASTM standards (E1527-05 and 40CFR Sec. 312). These standard search distances vary from adjacent to the project to one-mile around the Bottineau Transitway Project and are listed in [Appendix A](#). The database searches were conducted by alignment; therefore, there is overlap in the number of sites between adjacent alignments, as shown in [Figure 2](#).

2.1.3 Methodology

There is no single comprehensive source of information available, which identifies known or potential sources of environmental contamination along the alternatives of the Bottineau Transitway Project.

Therefore, to identify and evaluate sites potentially containing hazardous or regulated materials (such as petroleum products), or other sources of potential contamination, a governmental database search was conducted. This screening tool identifies locations of sites with known or potential environmental liabilities based on information contained in various federal and state government databases. A list of the databases searched can be found in [Appendix A](#). The databases that identified documented sites for the proposed alignments are listed below.

- **Superfund Site Information Listing (SHWS)** – This database includes all sites that the state Superfund Program is dealing with or has dealt with. The Superfund Program identifies, investigates, and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites. All SHWS sites are categorized as high risk. (one-mile search area)
- **Voluntary Investigation and Cleanup Program (VIC)** – Database containing records for sites enrolled in the VIC. All identified VIC sites are categorized as high risk. (1/2-mile search area)
- **Brownfields** – Database containing property information for petroleum impacted sites. All brownfield sites are categorized as medium risk. (1/2-mile search area)
- **Leaking Underground Storage Tanks (LUST)** – Database contains records of reported leaking underground storage tanks and other subsurface tank storage incidents. Closed LUST Sites beyond 1/8 mile are categorized as low risk and closed LUST Sites within 1/8 mile are categorized as medium risk. Open LUST sites are categorized as high risk. (1/2-mile search area)
- **Leaking Aboveground Storage Tanks (LAST)** – Database containing records of reported leaking aboveground storage tanks and other surface tank storage incidents. Closed LAST Sites beyond 1/8-mile are categorized as low risk and closed LAST Sites within 1/8-mile are categorized as medium risk. Open LAST sites are categorized as high risk. (1/8-mile search area)
- **SPILLS** – Database containing records for spills reported to the Pollution Control Agency. Closed SPILLS Sites beyond 1/8 mile are categorized as low risk and closed SPILLS Sites within 1/8th mile are categorized as medium risk. Open SPILLS sites are categorized as high risk. (1/2-mile search area)
- **Department of Agriculture Spills (AG SPILLS)** - Database containing records for pesticide and fertilizer incidents reported to the Pollution Control Agency. Closed AG SPILLS Sites beyond 1/8 mile are categorized as low risk and closed AG SPILLS Sites within 1/8 mile are categorized as medium risk. Open AG SPILLS sites are categorized as high risk. (1/2-mile search area)
- **Underground Storage Tanks (UST)** – Database listing registered underground storage tanks. Sites not listed in any previously described database are low risk. (Site and adjoining properties)
- **Aboveground Storage Tanks (AST)** – Database listing registered aboveground storage tanks. Sites not listed in any previously described database are low risk. (Site and adjoining properties)

When multiple databases referred to a site, the highest applicable risk was used for classification.

The impact analysis attempts to evaluate the potential risk for contaminants to be found during construction based on known records. It does not measure the severity of the hazardous materials found onsite. Each of the sites identified through the database search was assigned a degree of risk for potential soil and or groundwater impacts.

- **Low Risk**– Low Risk sites are sites with a low risk potential for having contamination on-site. These sites are locations where hazardous material or petroleum products may have been stored or used; however, based on subsequent file review and field reconnaissance, no known contamination is associated with the property. Low risk sites include closed LUST and LAST sites

that are more than 1/8-mile away from an alignment, inactive UST and AST sites, and closed SPILLS and AG SPILLS sites.

- **Medium Risk** – Medium Risk sites are sites with a medium risk potential for having contamination on-site. These sites are known to have, or have had, soil and/or groundwater contamination, but current information indicates that contamination is being remediated, does not require remediation, or that already requires continued monitoring. Medium risk sites include all Brownfields, open LUST and LAST sites that were more than 1/8-mile away from an alignment, open SPILLS and AG SPILLS sites.
- **High Risk** – These sites have a high potential for contamination to be found on-site. In some cases, contaminated groundwater may have migrated outside the boundaries of the site. Field investigation of soil and groundwater within planned construction limits may be needed to identify any contributing contamination from these sites and to identify a response action plan to be implemented during construction. High Risk sites include all SHWS sites, VIC sites, and open LAST and LUST within 1/8-mile of build alternative alignments.

2.2 Affected Environment

Potentially contaminated properties are often found in previously developed industrial and commercial areas, land uses that are common throughout the Bottineau Transitway project area. All of the proposed alignments have some potential to encounter contaminated soils, groundwater, and materials based on prior use and development along the corridor. **Table 1** provides a summary of the known hazardous/regulated materials sites identified within the study area of each alternative based on a review of several databases that track known contamination sites. **Appendix B** contains the full listing of the contaminated sites potentially affecting the Bottineau Transitway Alignments obtained during the records search. The identified sites are shown on **Figures 2 through 8**.

Table 1. Total Known Sites by Alternative

Alternative	Total Number of Classified Sites ¹
No-Build Alternative	-
TSM Alternative	-
Alternative 1:A-C-D1	820
Alternative 2: A-C-D2	907
Alternative 3: B-C-D1	790
Alternative 4: B-C-D2	883

¹Totals reflect all sites within the applicable ASTM standard search distances for each governmental database ranging from adjacent to the project area to sites within one mile of the alternative. Sites that exist in the study area for multiple alignments (A, B, C, D1, D2) were counted as one site within the study area for an alternative.

2.3 Environmental Consequences

2.3.1 Operating Phase Impacts

No-Build Alternative

There is no likelihood of encountering contamination from hazardous or regulated materials as a result of the No-Build alternative. No positive or negative impacts are anticipated to result from this alternative.

Transportation System Management Alternative

There is no likelihood of encountering contamination from hazardous or regulated materials as a result of the TSM alternative. No positive or negative impacts are anticipated to result from this alternative.

Build Alternatives

There would be no hazardous or regulated materials produced by the project during operation of the Bottineau Transitway. No permanent storage tanks would be installed for this project. The collection and disposal of oils, grease and other waste materials generated during vehicle maintenance and repair activities would be accomplished in accordance with recognized industry Best Management Practices (BMPs) for rail transit maintenance facilities.

Acquiring land that is contaminated or contains hazardous or regulated material creates risk in the form of costs and potential liability to the project and project proposer. The extent of that risk would be based on the type and extent of the contamination. Therefore, acquiring land with known contamination which cannot be easily remediated or contained would be avoided to the extent possible based on a more detailed investigation (Phase 1 and/or 2 Environmental Site Assessment) of potential for contamination after a preferred alternative is identified. If remediation is completed in areas of known and encountered contamination during construction, the long term risk to the project would be small.

Traction Power Substation (TPSS)

There would be no hazardous or regulated materials used or generated by the TPSS sites during operation of the Bottineau Transitway.

2.3.2 Construction Phase Impacts

No-Build Alternative

There is no likelihood of encountering contaminated or regulated materials as a result of the No-Build alternative. Therefore, no positive or negative impacts are expected.

Transportation System Management Alternative

There is no likelihood of encountering contaminated or regulated materials as a result of the Transportation System Management alternative. Therefore, no positive or negative impacts are expected.

Build Alternatives

The number of potentially contaminated sites in each alignment is summarized in [Table 2](#). Because there is overlap in the study area for each alignment, some sites are listed under more than one alignment. [Figure 2](#) illustrates these overlaps. There are no impact differences for the Operations and Maintenance Facility (OMF) sites under Alignment B, as there are no known potentially contaminated sites near either location. There are also no difference in impacts for either of the proposed stations under alignment D1, as there are no known potentially contaminated sites near either station

location. **Figures 3 through 8** illustrate known sites by alignment.

TPSS

The minimum clearance distance for TPSS sites and the light rail transit (LRT) tracks is approximately eight feet; therefore, the TPSS site would be located at least eight feet from the tracks. The TPSS would be sited to minimize the risk of acquiring or encountering contaminated materials, as balanced against other project alternatives.

Table 2. Contamination Risk by Alignment based on Classification and Location

	High Risk Sites		Medium Risk Sites		Low Risk Sites	
	Within Study Area	Within estimated disturbance area*	Within Study Area	Within estimated disturbance area*	Within Study Area	Within estimated disturbance area*
Alignment A	8	0	7	2	144	7
Alignment B	5	0	9	1	114	13
Alignment C	27	1	32	2	254	8
Alignment D1	31	0	45	0	354	0
Alignment D2	31	0	62	10	379	21
D Common Section	48	0	44	3	203	12

*Sites within the estimated area of disturbance are highlighted in **Appendix B**.

Summary of Impacts by Alternative

Table 3. Classification of Sites by Alternative

Alternative	Risk Classification for Sites* within the Estimated Area of Disturbance		
	Low Risk	Medium Risk	High Risk
No-Build Alternative	0	0	0
TSM Alternative	0	0	0
Alternative 1:A-C-D1	27	7	1
Alternative 2: A-C-D2	53	17	1
Alternative 3: B-C-D1	33	0	1
Alternative 4: B-C-D2	59	16	1

*Totals reflect all sites within the applicable ASTM standard search distances for each governmental database ranging from adjacent to the project area to sites within one mile of the alternative. Sites that exist in the study area for multiple alignments (A, B, C, D1, D2) were counted as one site within the study area for an alternative.

2.3.3 Indirect/Secondary Impacts

Build Alternatives

Provided the project follows the appropriate methods for handling, transporting, disposal and treatment of contaminated soil/groundwater or other contaminated materials, there would be no indirect or secondary impacts as a result of the project.

2.4 Avoidance, Minimization, and/or Mitigation Measures

Hennepin County and the Metropolitan Council would enroll in the MPCA VIC (Voluntary Petroleum Investigation and Cleanup) Program, to obtain assurances that contaminated site cleanup work and/or contaminated site acquisition would not associate the agencies with long-term environmental liability for the contamination, and to obtain approvals for any contamination management and clean-up plans.

High and medium risk areas, if within or near the area of disturbance, would be further assessed to determine the presence, type, and magnitude of contaminated soil and/or groundwater. A Phase 1 Environmental Site Assessment (ESA)(ASTM standards) would be completed for all disturbance areas within the selected build alternative. The results of the investigation would be used to determine if contaminated materials could be minimized or avoided or if additional investigation is needed (Phase 2 ESA). A Response Action Plan (RAP) would be developed to set a protocol for properly handling and treating contaminated soil and/or groundwater that could not be avoided during construction to address potential short-term impacts.

Prior to construction activities, a MPCA-approved Construction Contingency Plan would be developed, as part of the Voluntary Investigation and Cleanup (VIC) Program. In the event that previously unknown hazardous materials are discovered during construction, the Contractor shall notify the Project Engineer immediately and follow the prescribed management protocol contained in the Construction Contingency Plan. The materials would be handled in accordance with appropriate federal and state regulations to avoid short-term impacts.

A management plan would be developed for properly handling, treating, storing, and disposing of solid wastes, hazardous materials, petroleum products, and other regulated materials/wastes that are used or generated during construction. The plan would also establish protocol to minimize impacts to soils and groundwater in the event a release of hazardous substances occurs during construction. If a release were to occur, the Minnesota Duty Officer would be contacted immediately to make the required agency contacts.

Prior to the demolition of any structures, assessments for asbestos-containing materials, lead-based paint, and other regulated materials/wastes would be performed. A demolition and disposal plan would be prepared for any identified contaminants that may be encountered during construction.

3.0 Summary

Table S-1. Summary of Impacts and Mitigation Measures

Impact Category	Impacts of Build Alternatives	Avoidance, Minimization, and/or Mitigation Measures
Contaminated Materials	<p>Of the sites identified, the number of potential sites located within the estimated potential area of disturbance¹ include:</p> <p>Alternative A-C-D1: 35 sites Alternative A-C-D2: 71 sites Alternative B-C-D1: 40 sites Alternative B-C-D2: 76 sites</p>	<p>High and medium risk areas, if within or near the construction limits would be further assessed to determine the presence, type, and magnitude of contaminated soil and/or groundwater. A Phase 1 Environmental Site Assessment (ASTM standards) would be completed for all disturbance areas within the selected build alternative. The results of the investigation would be used to determine if contaminated materials could be minimized or avoided.</p> <p>A Response Action Plan (RAP) would be developed to set a protocol for properly handling and treating contaminated soil and/or groundwater that could not be avoided during construction.</p> <p>Hennepin County and the Metropolitan Council would enroll in the MPCA VIC (Voluntary Investigation and Cleanup) Program, to obtain assurances that contaminated site cleanup work and/or contaminated site acquisition would not associate the agencies with long-term environmental liability for the contamination, and to obtain approvals for any contamination management and clean-up plans.</p>

Table S-2. Summary of Construction Impacts and Mitigation Measures

Impact Category	Construction Impacts of Build Alternatives	Avoidance, Minimization, and/or Mitigation Measures
Contaminated Materials	<p>There is potential that unknown contaminated sites and hazardous / regulated materials could be encountered during construction activities.</p> <p>Regulated wastes may be generated by construction equipment or activities, and materials from demolished structures may be temporarily stored onsite.</p>	<p>Prior to construction activities, a MPCA-approved Construction Contingency Plan would be developed, as part of the Voluntary Investigation and Cleanup (VIC) Program. In the event that previously unknown hazardous materials are discovered during construction, the Contractor shall notify the Project Engineer immediately and follow the prescribed management protocol contained in the Construction Contingency Plan. The MN duty officer should also be notified immediately if unknown materials are discovered during construction. The materials would be handled in accordance with appropriate federal and state regulations.</p> <p>A management plan would be developed for</p>

¹ Area of disturbance was based on June 2012 conceptual layout

Impact Category	Construction Impacts of Build Alternatives	Avoidance, Minimization, and/or Mitigation Measures
		<p>properly handling, treating, storing, and disposing of solid wastes, hazardous materials, petroleum products, and other regulated materials/wastes that are used or generated during construction.</p> <p>A plan would be developed for the project in order to minimize impacts to soils and groundwater in the event a release of hazardous substances occurs during construction. If a release were to occur, the Minnesota Duty Officer would be contacted immediately to make the required agency contacts.</p> <p>Prior to the demolition of any structures, assessments for asbestos-containing materials, lead-based paint, and other regulated materials/wastes would be performed. A demolition and disposal plan would be prepared for any identified contaminants. Sample soils would be taken around structures that have/had lead-based paint. These sites would enter the VIC program for assurances.</p> <p>An MPCA-approved Construction Contingency Plan would be developed prior to construction due to the potential for discovering additional wastes during the construction of the project.</p>

APPENDIX A
GOVERNMENTAL RECORDS SEARCHED

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/07/2011	Source: EPA
Date Data Arrived at EDR: 10/12/2011	Telephone: N/A
Date Made Active in Reports: 03/01/2012	Last EDR Contact: 04/05/2012
Number of Days to Update: 141	Next Scheduled EDR Contact: 07/23/2012
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/07/2011	Source: EPA
Date Data Arrived at EDR: 10/12/2011	Telephone: N/A
Date Made Active in Reports: 03/01/2012	Last EDR Contact: 04/05/2012
Number of Days to Update: 141	Next Scheduled EDR Contact: 07/23/2012
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/07/2011	Source: EPA

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/27/2011	Source: EPA
Date Data Arrived at EDR: 02/27/2012	Telephone: 703-412-9810
Date Made Active in Reports: 03/12/2012	Last EDR Contact: 04/05/2012
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/11/2012
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Number of Days to Update: 14	Next Scheduled EDR Contact: 06/11/2012
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 07/29/2011	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 08/09/2011	Telephone: 202-366-4595
Date Made Active in Reports: 11/11/2011	Last EDR Contact: 02/07/2012
Number of Days to Update: 94	Next Scheduled EDR Contact: 05/21/2012
	Data Release Frequency: Varies

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: Quarterly

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/27/2011

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SWF/LF: Permitted Solid Waste Disposal Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

LCP: Closed Landfills Priority List

The Minnesota Legislature enacted a law to manage and clean up the state's closed Mixed Municipal Solid Waste Landfills. Under that law, the MPCA is required to create and periodically revise a priority list of qualified landfills, based on the relative health and environmental risks they present. The MPCA established the first such priority list in December, 1994.

BROWNFIELDS: Petroleum Brownfields Program Sites

Purchasing, selling, or developing property can present a special set of obstacles if the property is contaminated with chemicals. The Petroleum Brownfields Program is one of several programs within the Minnesota Pollution Control Agency (MPCA) designed to help people address these obstacles. The purpose of the Petroleum Brownfields Program is to provide the technical assistance and liability assurance needed to expedite and facilitate the development, transfer, investigation and/or cleanup of property that is contaminated with petroleum.

CDL: Clandestine Drug Labs

This data was passively gathered. That is, the DOH asks law enforcement and other agencies to notify them of Clandestine Drug Labs (CDLs). They do not require reporting of events. Therefore the data represents only a subset of all CDLs. This data has not been verified. The DOH has made no attempt to verify that reported CDLs actually occurred. They have no knowledge if the CDL was involved in cooking or just consisted of chemicals associated with Meth production. The reports they receive are that a suspected CDL was seized.

INDIAN VCP R7: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 7.

Date of Government Version: 03/20/2008	Source: EPA, Region 7
Date Data Arrived at EDR: 04/22/2008	Telephone: 913-551-7365
Date Made Active in Reports: 05/19/2008	Last EDR Contact: 04/20/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/20/2009
	Data Release Frequency: Varies

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A	Source: EDR, Inc.
Date Data Arrived at EDR: N/A	Telephone: N/A

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a treatment facility.

Date of Government Version: 02/20/2012	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 02/20/2012	Telephone: 860-424-3375

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Centers

Source: Department of Human Services

Telephone: 651-296-3971

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.
