STATEMENT RESEARCH DESIGN FOR CULTURAL RESOURCES***

BOTTINEAU TRANSITWAY - DRAFT ENVIRONMENTAL IMPACT STATEMENT

RESEARCH DESIGN FOR CULTURAL RESOURCES

PREPARED BY THE 106 GROUP LTD.

AUGUST 8, 2011

Introduction

The Hennepin County Regional Rail Authority is proposing to construct the Bottineau Transitway project, an approximately 13-mile transit corridor connecting downtown Minneapolis with the northwest suburbs, to improve regional mobility and meet long-range transit needs. The corridor is located within the cities of Minneapolis, Golden Valley, Robbinsdale, Crystal, New Hope, Brooklyn Park, and Maple Grove. The Bottineau Transitway will connect with the Minneapolis Transportation Interchange adjacent to the new Twins Ballpark, providing a link to destinations throughout the Twin Cities via other active or planned transit corridors, such as the Hiawatha Light Rail Transit (LRT) Line, the Northstar Commuter Rail, Central Corridor LRT, and the Southwest Transitway.

This proposed project is receiving funding from the Federal Transit Administration (FTA) and therefore, must comply with the National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act of 1966, as amended (Section 106). Hennepin County is completing an Environmental Impact Statement (EIS) under the direction of the FTA for compliance with NEPA. The Minnesota Department of Transportation (Mn/DOT) Cultural Resources Unit (CRU) is acting on behalf of the FTA for many aspects of the Section 106 process. Therefore, Hennepin County has consulted with the Mn/DOT CRU to determine an appropriate area of potential effect and scope of cultural resources investigations for the project. The results of this consultation are detailed below.

This corridor has been the subject of transit studies for more than 15 years and many build and no-build alternatives have been explored. An Alternatives Analysis initiated in 2008 and completed in 2010 identified four promising LRT alignments (consisting of varied compositions of five alternative segments and several subalternatives*) (Figure 1). An Optimized Bus Rapid Transit (BRT) Scenario Investigation completed in April 2011 by SRF Consulting Group explored BRT Options and concluded that an optimized BRT scenario compares favorably with the most promising LRT alternatives. The study recommended that two BRT service plans should be considered in the DEIS (Figure 1).

<i>Alignment</i>	<i>Alternatives</i>
1	A-C-D1
2	B-C-D1
3	A-C-D2*
4	B-C-D2*
5	Optimized BRT (B-D1/Route 732)

Alignment 1 includes a northern segment originating in Maple Grove traveling adjacent to 77th Avenue North and connecting to the BNSF Corridor through Crystal, Robbinsdale, Golden Valley and Minneapolis transitioning to Olson Memorial Highway (TH 55) to the Minneapolis Transportation Interchange (Figures 1-4).

Alignment 2 includes a northern segment originating in Brooklyn Park traveling south adjacent to Oregon and West Broadway avenues and connecting to the BNSF Corridor through Crystal, Robbinsdale, Golden Valley and Minneapolis transitioning to Olson Memorial Highway (TH 55) to the Minneapolis Transportation Interchange (Figures 1-4).

Alignment 3 includes a northern segment originating in Maple Grove traveling adjacent to 77th Avenue North and connecting to the BNSF Corridor through Crystal and Robbinsdale, transitioning to 36th Avenue, West Broadway, Penn Avenue, and Olson Memorial Highway (TH 55) to the Minneapolis Transportation Interchange (Figures 1-4).

Alignment 4 includes a northern segment originating in Brooklyn Park traveling south adjacent to Oregon and West Broadway avenues and connecting to the BNSF Corridor through Crystal and Robbinsdale, transitioning to 36th Avenue, West Broadway, Penn Avenue, and Olson Memorial Highway (TH 55) to the Minneapolis Transportation Interchange (Figures 1-4).

Alignment 5 is an optimized BRT plan that includes two components: the optimized BRT B-D1 trunk line and Route 732. The BRT trunk line runs the entire length of the B-D1 alignment from 97th Avenue Station in Brooklyn Park to downtown Minneapolis (Figures 1-4). Route 732 operates on Elm Creek Boulevard/Brooklyn Boulevard from Maple Grove Transit Station (MGTS) to the Brooklyn Boulevard BRT station, then follows the B-D1 alignment and operates just like the BRT trunk line, serving all stations between Brooklyn Boulevard and downtown Minneapolis (Figures 1-4). Route 732 operates in both directions during the weekday peak periods only.

**** D2 Subalternatives***

There are currently several D2 subalternatives being explored during the scoping process for the DEIS (Figure 4):

- **Subalternative D2 Robbinsdale (a)**: Follows the BNSF Corridor to 36th Avenue to frontage road, under the existing County Road 81 bridge at Victory Memorial Drive to West Broadway.
- **Subalternative D2 Robbinsdale (b)**: Follows the BNSF Corridor to 36th Avenue to County Road 81 median, on a new bridge structure adjacent to the existing County Road 81 bridge at Victory Memorial Drive to West Broadway
- **Subalternative D2 Robbinsdale (c)**: Follows the BNSF Corridor to 34th Avenue to County Road 81 median, on a new bridge structure adjacent to the existing County Road 81 bridge at Victory Memorial Drive to West Broadway
- **Subalternative D2 Penn Avenue (a)**: LRT travels on east side of Penn Avenue. Traffic on one-way pair – Penn Avenue southbound (SB)/Oliver Avenue northbound (NB). Oliver

Avenue converted to one-way northbound, one side of parking eliminated. Existing bus Route 19 runs on Penn (SB)/Oliver (NB)

- Subalternative D2 Penn Avenue (b): Maintain Penn Avenue roadway function. LRT travels on one side of Oliver Avenue. All vehicle traffic removed from Oliver Avenue; traffic on Penn Avenue (both directions). Trail on Oliver Avenue provided for pedestrian/emergency access only. No change to existing bus Route 19
- Subalternative D2 Penn Avenue (c): All transportation functions on Penn Avenue. LRT in center of Penn Avenue. Traffic on Penn Avenue (both directions). An enlarged median is provided for left turn lanes at intersections. No changes to Oliver Avenue or existing bus Route 19

Currently, the scoping process for the Draft EIS (DEIS) is underway and these alternatives and subalternatives are being evaluated to determine the final set of alternatives that will be included in the DEIS; not all currently proposed alternatives will move forward into the DEIS. Also, at this early stage in the project, there is limited information on the number and location of ancillary features such as ponding and staging areas, operations and maintenance facilities, park and rides, stations, bridges, and aerial structures (e.g. rail bridges).

Cultural Resources Investigations

As determined through conversations with Mn/DOT CRU in April and May of 2011, the 106 Group will be responsible for completing Phase I and II (if necessary) cultural resources investigations for the proposed project. Any further investigations, if necessary, such as an analysis of effects or mitigation, will be the responsibility of Mn/DOT CRU. A summary of the proposed methodology for the investigations is provided below. All work will be conducted in conjunction with all federal, state, and local laws, and the reporting will be prepared in accordance with the SHPO's *Manual for Archaeological Projects in Minnesota* (Anfinson 2005), *Guidelines for History/ Architecture Projects in Minnesota* (SHPO 2010), *Mn/DOT's Cultural Resources Unit Project and Report Requirements* (Hudak 2011), and the *Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation* (NPS 1983).

PROPOSED METHODOLOGY FOR ARCHAEOLOGICAL RESOURCES SURVEY

The following work plan outlines the 106 Group's approach to identifying and evaluating (Phase I and II, respectively) precontact and post-contact archaeological properties that are eligible for inclusion in the National Register of Historic Places (NRHP) in the project's area of potential effect (APE). The primary tasks that comprise this approach include research and assessment (Task 1), inventory and evaluation (Task 2), and analysis and reporting (Task 3).

Anne Ketz of the 106 Group, who meets the *Secretary of the Interior's Professional Qualification Standards* for archaeology, will serve as principal investigator for archaeology. The survey will be conducted in accordance with all federal, state, and local requirements including the Minnesota Field Archaeology Act and the Minnesota Private Cemeteries Act.

Area of Potential Effect (APE)

The APE for archaeology has been determined in consultation with Mn/DOT CRU and will be refined also in consultation with Mn/DOT CRU once project details are further developed. Based on the APEs for similar LRT projects in the Twin Cities Metropolitan Area and conversations with Mn/DOT CRU, the following draft APE has been developed for archaeology.

An appropriate APE for archaeology will include all areas of proposed construction activities or other potential ground disturbing activities associated with construction. As aforementioned, the alternatives are composed of existing urbanized transportation corridors (rail lines and roadways); therefore, based on consultation with Mn/DOT CRU, it is assumed that these areas are previously disturbed, contain low potential for intact archaeological sites, and will not require archaeological survey.

Ancillary features such as ponding and staging areas, operations and maintenance facilities, park and ride facilities, stations, bridges, and aerial structures (e.g. rail bridges) may extend beyond the existing rail corridors. In addition, if the BRT options extend beyond existing transportation corridors, archaeological survey of those areas may also be required. The final APE for archaeology will include the construction footprints for all ancillary features and will be defined and refined once additional details on the number and location of these features is further developed.

Archaeology Survey

Task 1: Research and Assessment

To inform the DEIS scoping process and identifying locations for ancillary features for the project, as well as aid in determining an appropriate APE, background research at the Minnesota State Historic Preservation Office (SHPO) has been conducted to identify all known archaeological sites and previously conducted cultural resources investigations within 0.25 miles of the currently proposed alternatives. A 0.25-mile study area was used at this initial stage to encompass all areas that may be within a final APE.

For Task 1, supplemental research at the Minnesota Historical Society (MHS) and the SHPO will be conducted to identify all known archaeological sites that have been previously identified within a one-mile radius of the project area. The one-mile radius aids in the determination of archaeological sites potential and in the development of a historical context for the project area. Research will also be conducted at the University of Minnesota to access historical aerial photographs, historical plat maps, and soil data. Pre-contact and post-contact period contexts will be briefly reviewed, with a focus to inform the discussion of potential site types within the APE and assessment of potential for intact archaeological resources to exist.

Based on the results of the research and desktop map analysis, the 106 Group will identify portions of the APE that have not been previously surveyed and do not appear to be disturbed and conduct a preliminary field assessment. This preliminary assessment will assess archaeological sites potential, identify areas of previous disturbance, and attempt to identify any surface features that may not be

depicted on historical maps or aerial photographs. The results of this assessment will inform the locations of subsurface testing in Task 2.

As previously stated, it is assumed that archaeological survey will be focused on portions of the proposed project area that will extend beyond the existing transportation corridors (rail lines or roadways). As the DEIS scoping process moves forward and the design of the proposed alternatives and location of ancillary features are identified, it is assumed that all areas outside of the existing transportation corridors that may be impacted by proposed construction will not be identified at one time. Therefore, assessment of the areas outside of the existing transportation corridors will be conducted as they are identified to continue to move the archaeological review forward, as well as further inform the DEIS scoping process and final selection of alternatives that will be included in the DEIS.

The research results will be compiled in an archaeological assessment report. This brief report will identify:

- Known archaeological sites and historic properties within a one-mile radius of the project area
- Sections of the APE have been previously documented/surveyed
- Sections of the APE that have been previously disturbed
- Portions of the APE that have not been previously surveyed that may require survey in the future.

At the conclusion of the archaeological assessment, the 106 Group will meet with Mn/DOT CRU to discuss the results and confirm areas requiring Phase I archaeological survey, if any.

Task 2: Inventory and Evaluation

Task 2 will begin with a Phase I archaeological survey for the portions of the APE for the selected alternatives that will move forward into the DEIS that were identified during assessment stage as requiring additional survey. During the Phase I survey, shovel testing will be employed in the high potential areas identified in the archaeological assessment report. In addition, limited shovel testing will be completed for any sites identified to clearly determine the overall character and delineate the horizontal and vertical extent of any sites that may be uncovered. Since the alignment alternatives are all within existing rail or road right-of-way and/or urbanized areas, it is assumed that archaeological survey will not be necessary for the existing corridor. It may, however, be required for any portion of the proposed alignments that may deviate from the existing corridors, if any, as well as the ancillary features associated with the proposed project. At the conclusion of the Phase I archaeological survey, the 106 Group will meet with Mn/DOT CRU to discuss the results and confirm areas requiring Phase II archaeological evaluation, if any.

If the results of the Phase I survey identify archaeology sites within the APE that are potentially eligible for inclusion in the NRHP, a Phase II evaluation of these properties will be completed to

determine their eligibility. A Phase II archaeological evaluation will involve the excavation of formal test units to assess the soil stratigraphy, types of artifacts present, vertical artifact densities, potential for features, site extent, and site condition. Test unit excavations are controlled excavations of 1 x 1 meter squares to determine the presence of buried artifacts and/or features. The results of the Phase II evaluation will be recorded on an updated Minnesota Archaeological Site form.

Artifacts encountered during the Phase I and II investigations will be collected in a manner consistent with state standards. Artifacts from private property will be returned to the landowner after they are analyzed in Task 3. All artifacts identified on publicly owned lands during the Phase I and II investigations will be curated at the Minnesota Historical Society.

Task 3: Analysis and Reporting

Following completion of the Phase I and any Phase II archaeological survey that may be required, the 106 Group will analyze the data and prepare a technical report of the investigations describing project methodology, previous investigations, appropriate historical contexts, results, and recommendations.

The reporting will be prepared in accordance with the SHPO's *Manual for Archaeological Projects in Minnesota* (Anfinson 2005) and *Mn/DOT's Cultural Resources Unit Project and Report Requirements* (Hudak 2011). All sites documented during the survey will be recorded on new or updated Minnesota Archaeological Site Forms. Collected artifacts will be processed and analyzed in compliance with the survey guidelines of the SHPO and the Mn/DOT CRU. Artifacts will be curated at an approved facility as required in the 106 Group's archaeology license.

If any properties are determined eligible for inclusion in the NRHP, Mn/DOT CRU and the FTA will determine the effects to the historic properties and appropriate mitigation measures, if necessary, in consultation with the SHPO.

Once all investigations are complete, the 106 Group will compile the results of the Phase I and II cultural resources investigations, Mn/DOT CRU's and FTA's analysis of effects and avoidance/mitigation determinations, if required, and the results of any consultation with agencies, stakeholders, and federally-recognized Native American tribes into the DEIS.

PROPOSED METHODOLOGY FOR ARCHITECTURAL HISTORY SURVEY

The following work plan outlines the 106 Group's approach to identifying and evaluating (Phase I and II, respectively) architectural history properties that are eligible for inclusion in the NRHP in the project's APE. All properties constructed in 1965 or before will be considered during the architectural history survey. The primary tasks that comprise this approach include inventory and evaluation (Task 1), and analysis and reporting (Task 2).

Greg Mathis, who meets the *Secretary of the Interior's Professional Qualification Standards* for architectural history and history, will serve as principal investigator for architectural history. The survey will be

conducted in accordance with all federal, state, and local requirements including the Minnesota Historic Sites Act.

In 2006 and 2007, the 106 Group completed a Phase I and II architectural history investigation for the County State Aid Highway (CSAH) 81 reconstruction project in Hennepin County. The APE for that investigation encompasses the majority of proposed Alternative C, a portion of the northern leg of Alternative D2, and a portion of the southern leg of Alternative A. Based on how recently this survey was conducted, only historical or architectural properties within this previously surveyed area that were built in 1965 or before and were not previously surveyed during the CSAH 81 investigation will need to be surveyed as part of the proposed Bottineau Transitway project.

In addition, an area east of Interstate 94 was recently surveyed for the Interchange project. The APE for Bottineau Transitway encompasses the APE for the Interchange study. In addition, portions of the downtown Minneapolis Optimized BRT route were previously surveyed as part of the Southwest Transitway project. No additional survey will be required for the portion of the APE within the Interchange and Southwest Transitway survey areas. All other previous surveys were conducted more than 10 years ago. Properties included in those surveys may now be of sufficient age to be eligible for inclusion in the NRHP. Alternatively, some properties may have either lost integrity or are no longer extant and are therefore no longer eligible for inclusion in the NRHP. Therefore, any properties included in these surveys that are also within the Bottineau Transitway APE will need to be reevaluated.

Area of Potential Effect (APE)

The APE for architectural history has been determined in consultation with Mn/DOT CRU and will be refined also in consultation with Mn/DOT CRU once project details are further developed. Based on the APEs for similar LRT projects in the Twin Cities Metropolitan Area and conversations with Mn/DOT CRU, the following draft APE (for both LRT and BRT alternatives) has been developed for architectural history.

An appropriate APE for historical and architectural resources accounts for any physical, auditory, or visual impacts to historic properties. The potential effects on an existing corridor include increases in noise and vibrations due to increased rail or bus traffic. The construction of new stations and other ancillary features will have a higher potential for physical, auditory, or visual impacts due to the new construction, as well as the increase in traffic around the station areas and possibility for increased development in suburban areas. In heavily developed urban areas, the potential indirect effect of proposed transit corridors is less, especially for the proposed BRT route and stations in downtown Minneapolis, because there is already significant traffic and less likelihood for increased development. Therefore, based on information currently available for the project, the following APE for architectural history has been determined (Figures 1-4):

- Proposed alignments/corridors - 500 feet either side
- Stations – 0.25 mile radius
- New structures (new or replacement bridges, pedestrian bridges, etc.) – 0.25 mile radius

- Existing structures – Modification (widening/reconstruction of existing structures) – 0.25 mile radius
- Existing structures – Pier Modification (moving piers to allow the LRT/BRT to go under) – 500 feet either side
- BRT alignment and stations in downtown Minneapolis – one block on either side

The APE for architectural history properties will be refined as more project details are developed.

Architectural History Survey

Task 1: Inventory and Evaluation

To inform the DEIS scoping process and identifying locations for ancillary features for the project, as well as aid in determining an appropriate APE, background research at the SHPO has been conducted to identify all known architectural history properties and previously conducted cultural resources investigations within 0.25 miles of the currently proposed alternatives. A 0.25-mile study area was used at this initial stage to encompass all areas that may be within a final APE.

For Task 1, supplemental research will be conducted at the MHS and local historical societies to locate historical maps, aerial photographs, and local histories in order to aid in the development of historical contexts.

The Phase I architectural history survey will be conducted within the APE. Each property built in 1965 or earlier and not previously surveyed during the CSAH 81 investigation will be surveyed and photo-documented with a digital camera. All other surveys previously conducted within the APE were conducted more than 10 years ago; therefore, all properties will be resurveyed to determine if they are now of sufficient age to be considered eligible for inclusion in the NRHP and to identify those that are no longer extant or no longer have sufficient integrity to be considered eligible for inclusion in the NRHP. In addition, properties previously listed or determined eligible for listing in the NRHP will be examined to verify they still retain integrity.

The Hennepin County property database provides building construction dates for tax parcels. These dates will be assumed to be generally reliable for properties erected in the last half of the twentieth century, and will therefore be used to eliminate properties built after 1965 from the survey. During fieldwork, surveyors will be observant of all properties to identify any that may have been incorrectly eliminated due to inaccurate or incomplete data. A Minnesota Architecture-History Inventory form will be completed for each historical property surveyed. At the conclusion of the Phase I survey, the 106 Group will meet with Mn/DOT CRU to discuss the results and confirm properties requiring Phase II evaluation, if any.

If the results of the Phase I survey indicate that historical properties within the APE are potentially eligible for inclusion in the NRHP, a Phase II evaluation of these properties will be completed to determine their eligibility. A Phase II architectural history evaluation will include additional property specific supplemental research at MHS, SHPO, the University of Minnesota and other local

repositories, as appropriate. Properties will be documented with detailed field notes and additional photographs with a digital camera may be taken. The results of the Phase II evaluation will be recorded on an updated Minnesota Architecture-History Inventory form.

Task 2: Analysis and Reporting

Following completion of the Phase I and any Phase II architectural history surveys that may be required, the 106 Group will analyze the data and prepare a technical report of the investigations describing project methodology, previous investigations, appropriate historical contexts, results, and recommendations. The reporting will be prepared in accordance with the SHPO's *Guidelines for History/Architecture Projects in Minnesota* (SHPO 2010) and *Mn/DOT's Cultural Resources Unit Project and Report Requirements* (Hudak 2011).

If any properties are determined eligible for inclusion in the NRHP, Mn/DOT CRU and the FTA will determine the effects to the historic properties and appropriate mitigation measures, if necessary, in consultation with the SHPO.

Once all investigations are complete, the 106 Group will compile the results of the Phase I and II cultural resources investigations, Mn/DOT CRU's and FTA's analysis of effects and avoidance/mitigation determinations, if required, and the results of any consultation with agencies, stakeholders, and federally-recognized Native American tribes into the DEIS.

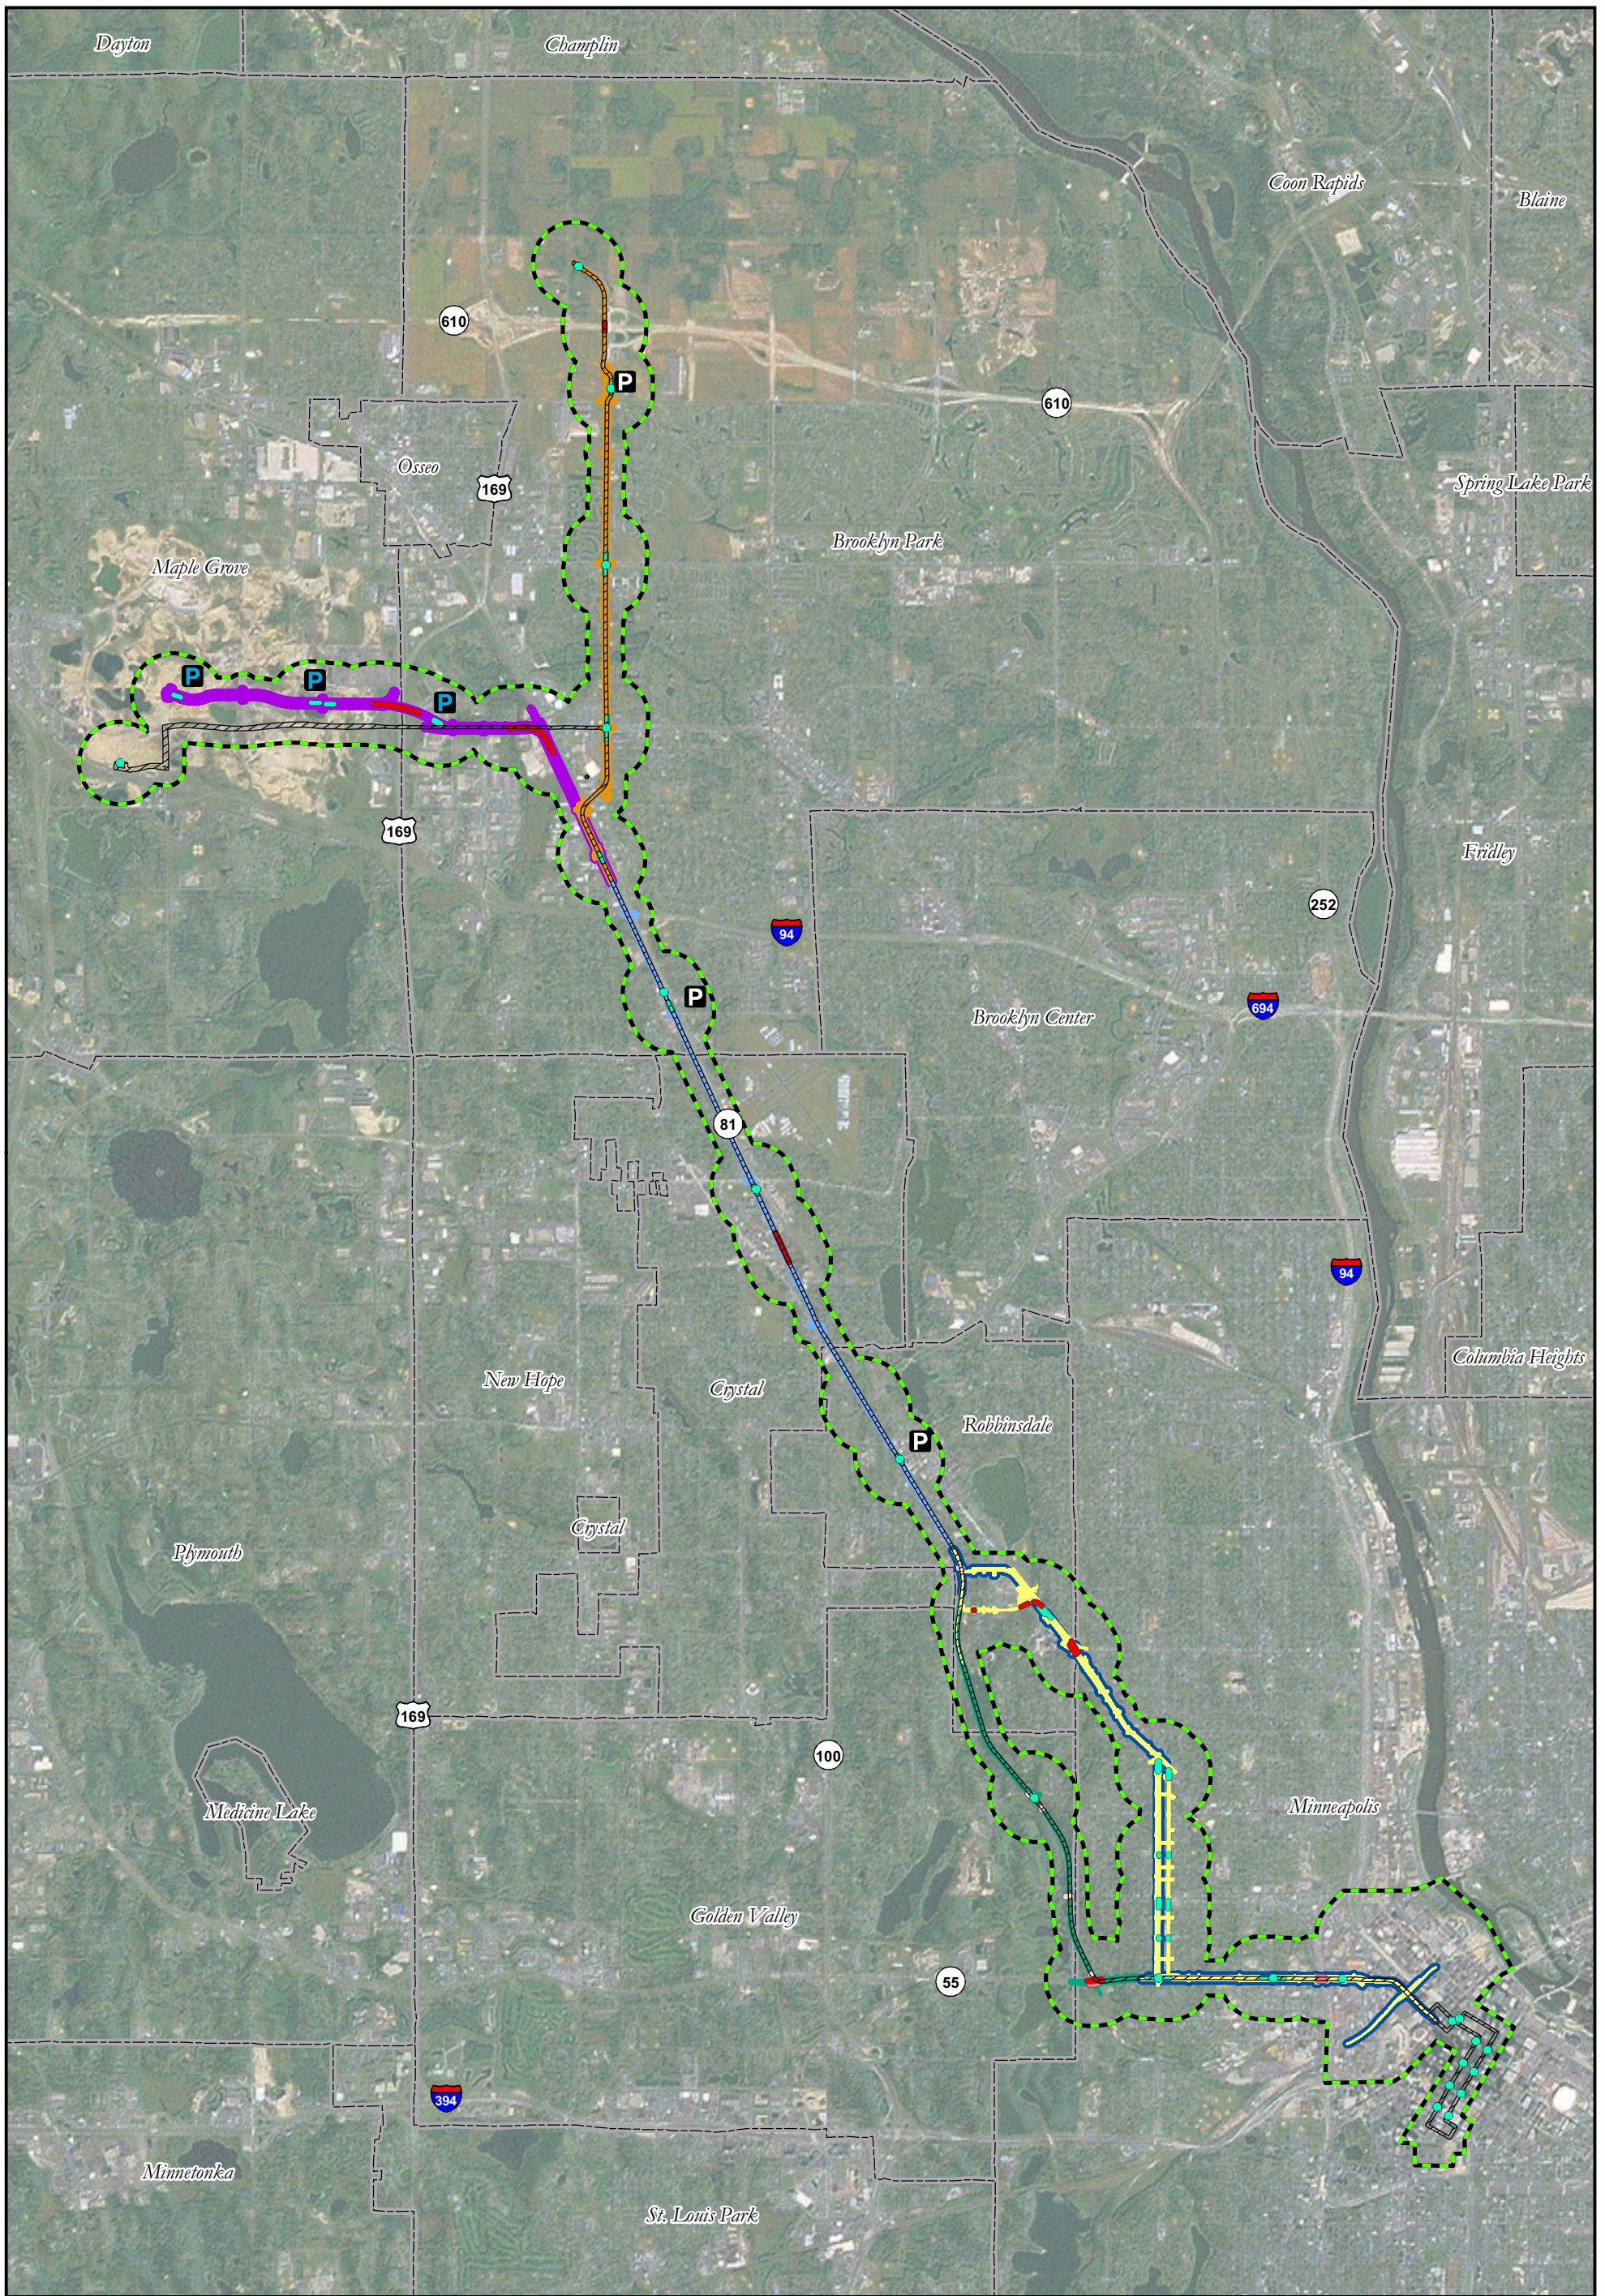

SUMMARY OF DELIVERABLES

Through the course of the cultural resources investigation for the Bottineau Transitway project, the following deliverables will be provided:

- Combined report for the archaeological assessment, Phase I archaeological survey, and Phase II archaeological survey, if needed
- Combined report for the Phase I architectural history survey and Phase II architectural history survey, if needed
- Geographic Information Systems (GIS) data per the Mn/DOT CRU guidelines

Native American Consultation

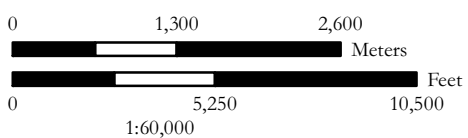

Consultation with appropriate federally recognized Native American tribes pursuant to Section 106 will be conducted by the FTA. As aforementioned, the results of any Native American consultation will be incorporation into the DEIS.
