**Note:** The streetscape design for West Broadway Ave. is being developed in coordination with the Visioning Team with input from the City, County, and Community. Improvements shown on the station site plan do not imply that the LRT Project will provide them. Final determination of funding sources for the streetscape features is yet to be determined.

BROOKLYN PARK
OAK GROVE PKWY STATION DESIGN CONCEPTS

Ways to the northern terminus at the West Broadway Avenue station, this station serves as a link between existing modes of transportation and the Blue Line LRT Extension. The station is designed to be a hub of community activity, with special events and educational programs. The Energy Hub concept is a national example of TOD, mixed-use development, and active community engagement.

To the south of the station, there is a vertical circulation system (elevator & stairs) and an overhead canopy. The station also includes an exterior bike parking area, pedestrian paths, and potential TOD opportunities. The station entrance point is designed to be sustainable and energy-efficient, with green spaces and modern materials. The station is a symbol of the city's commitment to sustainable design and community involvement.
