

# Reduce your risk of a sewer backup!

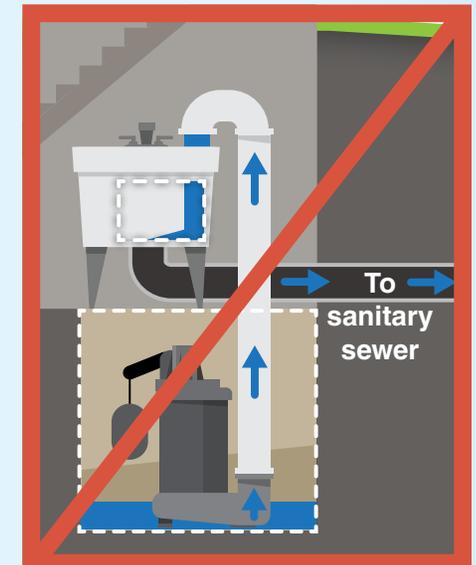

Sewer backups into your building can cause thousands of dollars' worth of damage and require a lot of time and effort on your part to fix. However, you can reduce the risk of sewer backups.

Have the sewer service line from your building to the city's sewer main inspected and fixed by a plumber if there is damage.

Inspect your gutters/downspouts and sump pump to make sure that they do not connect to your sewer service line.

Taking these steps can reduce the risk of a sewer backup into your building and increase the value of your property.
