

Hopkins System Improvements: Program 8041

Description:

This project will replace the existing forcemain and lift station to provide long term, reliable service to the City of Hopkins and St. Louis Park. Lift Station L-27 was built in 1970 and is in need of replacement due to its age, construction and condition. This project replaces the existing lift station with a new lift station near the existing site. The project also includes the construction of a new dual forcemain system from the new lift station through the cities of Hopkins, St. Louis Park, and Minneapolis.

The new dual forcemain system has been completed from Blake Road in Hopkins through St. Louis Park to East Calhoun Parkway in Minneapolis. The remaining forcemain (East Isles) is on hold until spring of 2019. The new lift station and associated piping is currently under construction.

Purpose and Justification:

The purpose of the project is largely rehabilitation to improve the reliability and efficiency of the operation in order to prevent failures associated with an aged conveyance system. It also provides for the long-term service needs for the Cities of Hopkins and St. Louis Park.
