Metro Plant Solids Management Improvements Facility Plan

SUSTAINABLE INCINERATION

Metropolitan Council Environmental Services (MCES) proposes to continue sustainable incineration at its Metropolitan Wastewater Treatment Plant (Metro Plant).

Project Overview

The project includes construction of a fourth incinerator, followed by renewal of existing incineration facilities. The fourth incinerator includes energy recovery, air pollution control, and related solids processing equipment.

Project Background

MCES employs the newest environmentally sustainable methods for processing solids removed from wastewater at the Metro Plant. The process eliminates bacteria, generates energy, and reduces solids disposal. The Metro Plant incineration system continues to have an exceptional track record of environmental compliance.

Project Need

The Metro Plant needs additional wastewater solids processing capacity to:

- Preserve Existing Wastewater Treatment Plant Infrastructure
  
  Planned renewal projects will require extended downtime of the existing incinerators.

- Serve Regional Population Growth
  
  500,000 new residents in the Metro Plant service area in the Twin Cities by 2050.

PROJECT LOCATION

The Metro Plant treats 180 million gallons of wastewater every day for 66 communities (green area on map) and processes 850 wet tons of solids every day for 73 communities.

The Metro Plant is located three miles southeast of downtown Saint Paul.
Fourth Incinerator Project Benefits

The fourth incinerator is the most cost-effective and sustainable alternative to meet the region’s wastewater needs. It will have the lowest community impact, and will improve the reliability of the wastewater treatment system.

**COST EFFECTIVE**
Adding a fourth incinerator costs 50% less to construct, operate, and maintain than any other solids processing alternative.

**LOW GREENHOUSE GASES**
Greenhouse gas emissions are similar to other alternatives and insignificant compared to other industries and are offset through energy recovery.

**LOW IMPACT**
A fourth incinerator will not generate additional odors or require land acquisition, providing the lowest impact to surrounding communities.

**EXCEPTIONAL AIR QUALITY**
The fourth incinerator will meet strict air emission standards, ensuring protection of human health and the environment.

**ENERGY RECOVERY**
Incineration recovers enough energy to power 2,400 homes. The energy recovered is used within the plant and saves ratepayers $2.5 million per year.

**SYSTEM RELIABILITY**
The fourth incinerator will allow the Metro Plant to serve as backup to the other MCES facilities, increasing the reliability of the whole MCES system.

---

**Project Schedule**

| MCES began planning in 2015. The fourth incinerator would be constructed by 2024, followed by renewal of existing facilities. |

**MCES Mission**
Provide wastewater services and integrated planning to ensure sustainable water quality and water supply for the region.
