Theodore Wirth Park sewer lining work begins Oct. 2

Beginning Tuesday, October 2, construction crews will be lining the sewer pipe in Theodore Wirth Park. This process involves installing a liner in the existing sewer pipe and curing it in place to create a new pipe in the existing sewer pipe. Sewer lining work is expected to last for approximately two weeks.

Once crews start the lining process, it cannot be interrupted, so construction crews will need to work overnight. Trail users can expect to hear the pumps powering the sewer liner equipment, see bright lights at night from the construction site, and smell odors from the process.

There will be trail disruptions and bicyclists will be directed to dismount and walk bikes along the sewer lining work area on Luce Line Trail parallel to Highway 55 (see map). Signage will be posted in advance along the trail.

Trail users should also watch for and be careful of hoses laid across the trail. Hoses will be covered with a low incline ramp for trail users to cross and orange cones will be placed near them to warn people of the equipment. Hoses will be removed after the sewer lining work is completed.

Weekend construction activities: Sat., Oct. 6

Crews will be working at the Theodore Wirth Park construction site on Saturday, October 6 to continue sewer lining activities. Trail users should be cautious around the construction work and equipment.
