

Battle Creek Sewer Construction

Project Update - October 12, 2021

Overview

Construction on the Battle Creek regional interceptor system is finished. Infiltration and inflow have been improved, deteriorated areas have been rehabilitated, and the system will continue to provide wastewater services throughout the region. Seeding of the project area and restoration of native vegetation will take place in November.

Trails

All paved and mountain bike trails are open. Please be mindful of trail location and stay off newly seeded areas to allow for plant growth.
