The Beltline project was part of a multi-phased rehabilitation program of the regional sewer system in the Saint Paul area. The first phase occurred in the vicinity of Phalen Park in 2016-2017. The Beltline project was the second phase and included 7,300 feet of sewer pipe and structures that were repaired between September 2018 and September 2020.

**Project Area**

The project was divided into two sites located on the east side of Saint Paul:

- Site 1: Middle Beltline Interceptor – along Etna Street between Case Avenue and Beech Street
- Site 2: Lower Beltline Interceptor – along Highway 61 south of I-94, and along Warner Road

The project used cured-in-place pipe (CIPP) technology which injected an inverted liner into the existing pipe structure. Sewer maintenance holes were repaired or replaced as needed.

Please look at the project maps for more detailed information about the project area.

**Project Completion**

All work is complete at both sites. The following items were completed as part of the project:

1. CIPP was installed to rehabilitate sewer pipes at Site 1 and Site 2;
2. Maintenance holes were repaired or replaced and corrosion resistant linings installed;
3. Road crossings were repaved;
4. Sidewalk, curb, and gutters were replaced after the removal of temporary pipes;
5. A new backstop and infield were installed at Penny Park as part of project restoration at Site 1; and
6. Final seeding, tree planting, and erosion control blankets were installed at both sites.

**Thank You**

A special thank you to those who may have been impacted by this construction project. Your patience and understanding are appreciated.

For more information, visit the project website.
If you have questions about the project, please contact Tim O'Donnell, MCES Project Citizen Liaison.
