Project Description
Metropolitan Council Environmental Services (MCES) has completed improvements to Lift Station 32, located at the corner of Mississippi Ln. and Brookdale Dr. in Brooklyn Park. Updates have been made to station structures and the odor control system to maintain a safe work environment for MCES employees. These improvements may also decrease noticeable odors emitted from the station. Construction began in January 2018 and was completed in April 2019.

Project Completion
The construction trailers and dumpster have been removed. New stainless steel decking has been installed. Please see photos below. Moving forward, normal maintenance crews will be the only traffic to the station.

Thank You
A special thank you to those who may have been impacted by this construction project. Your patience and support made this project a success.
