

# Burnsville Interceptor Improvements Project

September 25, 2019

## Sewer lining work on Parc Drive begins week of September 30

Beginning the week of September 30, construction crews will be lining the sewer on Parc Drive. During the sewer lining process, a liner is inserted down a manhole and expands in the sewer pipe to an adjacent manhole. Hot water is added until the heat-activated resin in the liner hardens to form a rigid new pipe inside the existing pipe.

Please be aware:

- Once the lining process is started, it cannot be stopped. There may be some after-hours work during the lining, if needed. Crews will work to minimize noise.
- You may feel small vibration or notice a sweet chemical odor from resin that is used during lining. To prevent odors in your home/business, pour a few glasses of water down drains that are used regularly—especially basement floor drains, laundry tubs, extra bathrooms (sinks and tub/shower) not in use, etc. The water will keep the plumbing traps full to block sewer odors from entering the home.

The sewer lining work is anticipated to take two days to complete. Once the lining work is complete, crews will remove the temporary bypass and repair the road. All restoration work is expected to be finished by mid-October.

Thank you for your continued patience during this work.
