Please note: The construction timeline is subject to change pending weather conditions and ongoing coordination efforts with various contractors and agencies working in the project area.

Activity Update
The pipe lining for the city sewer line behind Majestic Way and Windmill Drive was completed this week. Over the next few days, work on the city maintenance holes will be completed.

Temporary Conveyance System to Start Week of March 9th
The temporary conveyance system is anticipated to become operational the week of March 9th. Once activated, pumps will run continuously to maintain sewer service. While the pumps will be enclosed to mitigate the noise, additional noise and nighttime lighting near the pump pit site is expected. The temporary conveyance system will be monitored 24-7 and visual inspections will occur daily. It is anticipated that the system will be active until May.

Pipe Lining Process to Start Week of March 16th
Once the temporary conveyance system is activated, the Cured-In-Place Pipe (CIPP) lining process will begin to rehabilitate the sewer interceptor pipe. An inverted liner will be inserted into the existing pipe structure at maintenance holes. Water is used to expand the liner and a resin adheres the liner to the pipe, strengthening the pipe structure. The liner will be installed using a truck and crane (see example photos). The pipe lining will be installed in sections, with the staging area moving from south to north along the temporary access road as sections are completed. Crews will be working 24-7 as the lining is installed. Nighttime activity near the staging area and along the access road can be expected.

Example photos of pipe lining process
