Restoration Work Begins

Crews from the Metropolitan Council Environmental Services (MCES) have finished testing the new lift station located near the intersection of Brockton Lane and Bass Lake Road and the lift station is now fully functional.

On-site restoration work is now underway which includes:

- Cleaning up materials on-site
- Installing light poles
- Constructing retaining wall
- Installing hydrate extension
- Installing removable bollards
- Finishing site-grading
- Paving access road and parking lot
- Seeding and blanketing

Restoration is anticipated to be complete in early August. The area will remain an active construction zone until restoration is complete.

Thank you for your patience throughout construction on the new Corcoran lift station. If you have any questions or concerns as crews begin to wrap-up work on-site, please email us at info@corcoranliftstationproject.com or call the project hotline at 763-280-7111.

Contact us with questions or concerns at any time during the project.
