Debris removal continues near Bruce Vento Park in St. Paul

Sewer cleaning crews have moved from Bruce Vento Park in St. Paul to the small station at the end of Commercial Street near the park. Crews have cleaned approximately 2,800 feet of the 13’x13’ sewer line and have removed nearly 1,100 tons of debris from the sewer pipes since January 2020. Cleaning will be completed this spring and then crews will inspect the line with televising equipment.

Debris from the sewer pipes is being placed in a container that will later be disposed of at a licensed landfill.

Contact Tim O’Donnell, Project Citizen Liaison, with questions or concerns at any time during the project.
