Hello Neighbor!
NOTICE OF SEWER IMPROVEMENT CONSTRUCTION IN YOUR AREA

Metropolitan Council Environment Services (MCES) will be constructing an underground sanitary sewer odor control facility on Minneapolis Park & Recreation Board property between East River Terrace and East River Parkway in Minneapolis, just east of St. Anthony Avenue. Construction is scheduled to begin in spring 2017, with site restoration concluding in fall 2018.

Fan testing begins Monday, October 31 at various locations in Minneapolis

In preparation for the spring 2017 project, MCES’s consultant, Brown & Caldwell, will be performing fan tests from Monday, October 31 through Friday, November 4. These tests will involve the distribution of several fans venting sewer air from several locations. Pressure monitors will also be in place at other locations.

The fans will run Monday through Friday, from 8 a.m. to 3 p.m at the following locations:
- Near University Ave. at 11th Ave. SE.
- Cecil St SE and the intersection of Cecil St SE and E River Pkwy.
- 2nd St SE, between 10th Ave Bridge and I35W.
- 2nd St SE at intersection of 2nd St SE & SE 2nd Ave.

Please note that there may be noise and odor associated with this work.

This testing is needed to help determine if the designed vessels will achieve a negative air pressure in the large sewers. A negative pressure will prevent sewer air from escaping once the vessels become operational.
