## LAKE ELMO WEST CONNECTION

### PROJECT UPDATE #1

Construction began earlier this summer and has been progressing nicely. The contractor mobilized the site and started site set up activities including potholing for utilities. The contractor is currently working on installing dewatering systems which will be used to start the excavation of tunneling pits.

### What to Expect

The excavation process involves digging large pits to access underground areas for tunnel boring and installation. You can expect increased activity and equipment in the area, including excavation machinery and support structures to ensure safety. There may also be temporary disruptions such as noise and dust, but we are taking measures to minimize impact and maintain safety. Thank you for your patience and understanding as we work to improve our infrastructure.
