# LAKE ELMO WEST CONNECTION

## PROJECT UPDATE #2

The contractor is nearing completion of the initial pits and is preparing to move operations to the area along I-94, west of the Bielenberg Bridge. Progress continues as crews finish excavating the first two shafts, which will serve as the endpoints for the first tunneling segment.

Once the shaft construction is finalized, the team will shift focus to setting up for tunneling activities. This phase includes mobilizing specialized equipment and ensuring all systems are ready to support the tunneling process efficiently. Tunneling activities are set to begin December 16, 2024.

Stay tuned for further updates as we move closer to beginning tunneling operations.
