

# Maple Grove Sanitary Sewer Improvement Project

## Construction Update: June 2024

Issue 6

### Timeline update

Construction that was initially scheduled to occur in 2024 will now begin in spring 2025. We are working diligently and assure you we are doing everything in our power to complete the project as efficiently as possible. Despite the delay, we remain committed to communicating frequently and minimizing disruptions to the community when construction begins.

### We want to hear from you

There will be another open house before construction begins in 2025. In the meantime, if you have additional feedback, we'd like to hear from you! Please take the survey below which will help us better understand your household's needs during construction and how to best communicate with you throughout construction.

[Take a 3-minute survey here](#)

### Next steps

We look forward to keeping the neighborhood updated throughout the project and plan to communicate with residents through email updates, postcards, and a spring open house. If there are other ways to reach you and your neighbors, please let us know.

### About this project

Metropolitan Council Environmental Services (Environmental Services), operator of the metro-area wastewater collection and treatment system, is making improvements to regional sanitary sewer facilities along 72nd Avenue in Maple Grove. These facilities serve over 500 acres of homes and businesses in the southwest portion of Maple Grove as well as portions of Corcoran. Work includes installing a new regional sanitary sewer pipe in 2025.
