

Sanitary sewer pipe lining begins Monday, November 1

Starting Monday, November 1, crews will begin lining the pipe along 2nd Street between 15th Avenue N. and 8th Avenue N. as part of the project's sanitary sewer repair work. This work is anticipated to be completed in approximately one week.

Once the pipe lining is complete, crews will begin repair work on maintenance holes located on 2nd Street. Barriers will be set up around each maintenance hole for repair work and crew safety. Traffic on 2nd Street will be maintained in each direction. Some parking restrictions may occur in the areas of repair work.

Crews will also begin removing the temporary wastewater conveyance pipes that were placed along 2nd Street at the beginning of the project.

About the pipe lining process

The method to repair the pipe is Cured-in-Place-Pipe (CIPP) lining. The liner is inserted down into the sewer pipe and spreads out into the pipe by filling the liner with large volumes of water or steam. Hot water or steam is added until the heat-activated resin in the liner hardens to form a rigid new pipe inside the existing pipe.

Once the lining process is started, it cannot be stopped, so during this time you may see crews working around the clock for several days. Please be aware that there may be some noise at night associated with this work. Crews will work to minimize noise to the extent possible.

Thank you for your patience and assistance during this work.
