24-hour pumping begins in late March

Installation of the temporary aboveground wastewater conveyance piping on the north side of E Minnehaha Pkwy between 38th Ave N and 44th Ave S is complete. Crews will begin testing the piping next week and wastewater will be diverted through this portion of the temporary system in late March. Electric pumps will run 24 hours a day, 7 days a week until the system is taken down next fall.

Crews continue the installation of temporary above ground wastewater conveyance piping south of E Minnehaha Pkwy to 50th St.

Installation of temporary vent shafts continues through mid-April

Crews are installing two vent shafts between Minnehaha Creek and the roundabout on Minnehaha Ave. These vent shafts are necessary to bring materials into the tunnel and provide air flow for crews once work begins in the tunnel. The vent shafts are anticipated to be complete in mid-April.

Safety reminder

Trail users, for your safety, please remember to follow any posted detour signs and do not cross the fenced off areas.

Construction activities and schedules are subject to change due to weather and other unforeseen circumstances.
