Project Site

Roseville Sewer Rehabilitation Project
DALE ST.
The Project Team expects to be in the park March - August, 2018.
The tennis court and part of the field on school property will be used during construction.
Fencing will surround the construction area.
Sidewalks will be temporarily closed along the west side of Dale St. during construction.
Students and staff may notice wastewater and resin odors during the summer when school windows are open.
The Project Team expects to be in the park March - August, 2018.

- The tennis court and part of the field on school property will be used during construction.
- Fencing will surround the construction area.

Sidewalks will be temporarily closed along the west side of Dale St. during construction.

- Students and staff may notice wastewater and resin odors during the summer when school windows are open.
Cured-in-Place-Pipe (CIPP) Lining Rehabilitation Process

CIPP is a trenchless rehabilitation method that accesses pipes through manholes. A Styrene coating is applied to the inside of the pipe, creating a new pipe inside of the existing pipe. Temporary wastewater conveyance pipes are used to divert flow during construction for the CIPP lining replacement.

What to Expect

- Short-term temporary road closures for Dale St. and County Rd. B with designated detours
- Short-term temporary lane closures for Dale St. and County Rd. B
- Sidewalk closures along County Rd. B and Dale St.
- Limited access to parts of Parkview School property and Villa Park.
- Construction equipment, noise, vibrations, and smells.
