

## St. Croix Valley Wastewater Treatment Plant Restoration Project

### Construction Update – Summer 2022

Metropolitan Council Environmental Services (MCES) has been restoring equipment and facilities at its St. Croix Valley Wastewater Treatment Plant in Oak Park Heights that were damaged by a fire in 2018. Temporary repairs were made shortly after the fire to keep the treatment plant fully operating. This work is providing permanent restoration.

**This May and June**, all three new blowers in our odorous air treatment system were successfully tested and are now in full operation.

**Final completion** of the restoration project is on schedule for July 29, 2022. Some additional HVAC and water pipe work will continue under another contract. We anticipate little or no impact to nearby residents.

**The wastewater treatment plant has remained in full operation during the construction.**

The St. Croix Valley Plant treats wastewater for the cities of Oak Park Heights, Stillwater, and Bayport. The plant treats approximately 3 million gallons of wastewater daily and discharges the resulting clean water to the St. Croix River. The plant is located northeast of the intersection of Highway 36 and Highway 95, just south of the Sunnyside Condominiums.
